R Relieving
N Non-relieving
E Closed bottom
M Manual, spindle type
T Manual, 1/4 turn
A Automatic

**Technical features**

Fluid: Compressed air
Maximum pressure:
- 17 bar (250 psig)
- 1 bar (15 psig)
- Less than 0.2 bar (3 psig)
- Greater than 0.3 bar (5 psig)
- 25 µm, 5 µm or 40 µm filter element

Air quality: Within ISO 8573-1, Class 3 and Class 5 (particulates)

**Installation**

1. Install unit vertically in line -
   - with air flow in direction of arrow on top of yoke,
   - upstream of lubricators and cycling valves,
   - as close as possible to the device being serviced.
2. Connect piping to yoke ports using pipe thread sealant on male threads only.
3. Install a pressure gauge in regulator or plug gauge ports. Gauge ports can also be used as additional outlets for regulated air.
4. Lubricate o-rings (15) with a light coat of o-ring grease, then place o-rings in grooves in body (14).
5. Place clamp ring under lugs on top of yoke.
6. Make sure arrows on yoke and regulator point in same direction, then plug regulator into body (14).
7. Turn bowl into body until arrowhead on bowl is aligned with or to the right of the arrowhead on the body.
8. Flexible tube with 3mm (0.125") minimum I.D. can be connected to the automatic drain. Avoid restrictions in the tube.

**Adjustment**

1. Before applying inlet pressure to filter/regulator, turn adjustment (1 or 7) counter clockwise to remove all force on regulating spring (11).
2. Apply inlet pressure, then turn adjustment (1 or 7) clockwise to increase and counter clockwise to decrease pressure setting.
3. Always approach the desired pressure from a lower pressure. When reducing from a higher to a lower setting, first reduce to some pressure less than that desired, then bring up to the desired pressure.
Note
With non-relieving filter/regulators, make pressure reductions with some air flow in the system. If made under no flow (dead-end) conditions, the filter/regulator will trap the over-pressure in the downstream line.
4. Knob Adjustment. Push knob toward body to lock pressure setting. Pull knob away from body to release. Install tamper resistant cover and wire (see Replacement Items) to make setting tamper resistant.
5. T-bar Adjustment. Tighten lock nut (8) lock pressure setting.

Servicing
1. Open manual drain to expel accumulated liquids. Keep liquids below baffle (53).
2. Clean or replace filter element when dirty.

Disassembly
1. Shut off inlet pressure. Reduce pressure in inlet and outlet lines to zero.
2. Turn adjustment (1 or 7) fully counterclock wise.
3. Unscrew clamp ring and remove unit from yoke.
4. Disassemble in general accordance with the item numbers on exploded view. Do not remove the drains unless replacement is necessary. Remove and replace only if they malfunction.

Cleaning
1. Clean parts with warm water and soap.
2. Rinse and dry parts. Blow out internal passages in body with clean, dry compressed air. Blow air through filter element (55) from inside to outside to remove surface contaminants.
3. Inspect parts. Replace those found to be damaged.

Assembly
1. Lubricate o-rings, the portion manual drain body (43) that contacts the bowl, and the hole in the manual drain body that accommodates the stem of drain valve (41) with o-ring grease.
2. Lubricate valve stem (62), adjusting screw threads and tip (3, 7) and the recess of spring yoke.
3. Lubricate bonnet threads (2, 9) with a small amount of anti-seize compound.
4. Assemble the unit as shown on the exploded view.
5. Assemble the liquid indicator parts (19 thru 26, 30 thru 37) to reservoir. Apply a 0.9 to 1.8 kg (2 to 4 pound) clamping force to upper and lower sight glass brackets (20, 31). Tighten screws (19, 30).

WARNING
These products are intended for use in industrial compressed air systems only. Do not use these products where pressures and temperatures can exceed those listed under Technical Data. Polycarbonate plastic bowls can be damaged and possibly burst if exposed to such substances as certain solvents, strong alkalies, compressor oils containing ester-based additives or synthetic oils. Fumes of these substances in contact with the polycarbonate bowl, externally or internally, can also result in damage. Clean with warm water only.
Use metal bowl in applications where a plastic bowl might be exposed to substances that are incompatible with polycarbonate.
If outlet pressure in excess of the filter/regulator pressure setting could cause downstream equipment to rupture or malfunction, install a pressure relief device downstream of the filter/regulator. The relief pressure and flow capacity of the relief device must satisfy system requirements.
The accuracy of the indication of pressure gauges can change, both during shipment (despite care in packaging) and during the service life. If a pressure gauge is to be used with these products and if inaccurate indications may be hazardous to personnel or property, the gauge should be calibrated before initial installation and at regular intervals during use.

Before using these products with fluids other than air, for non industrial applications, or for life-support systems consult Norgren.

Use in potentially explosive atmospheres
Code of device according EC directive 94/9/EC ExII 2 GD c TX
- Only non-flammable gases to be used as a medium.
- Surface temperature dependant on process fluid temperature and ambient temperature - must be below the ignition temperature of the flammable gas or dust.
- Earth unit and/or pipework to avoid electrostatic discharge.
- Precautions should be taken to prevent hazard from adiabatic compression.
- Use wet cloth for cleaning.
- Protect the unit from object falling onto it.
- Avoid contact with corrosive environment.
- For servicing the unit it is recommended to carry out this work outside of the danger zone.
- For details of ignition hazard assessment contact Norgren.

Our policy is one of continued research and development. We therefore reserve the right to amend, without notice, the specifications given in this document. (1999 - I&M8093d) © 2015 IMI International s.r.o.
