

KA/802000/M Stainless Steel ISOLine™ 15552 cylinder, double acting

- ø 32 ... 200 mm
- High performance adaptive cushioning system "ACS"
- High temperature version up to +150 °C
- High corrosion and acid resistance
- Ideal for applications in the food industry

Technical features

Medium:

Compressed air, filtered, lubricated or non-lubricated

Standard:

ISO 15552

Operation:

Double acting, adjustable cushioning

Operating pressure:

ø 32 ... 200 mm
Cylinder with Round barrel
1 ... 16 bar (14 ... 232 psi)

Ports:

G1/8 ... 3/4

Cylinder diameters:

32, 40, 50, 63, 80, 100, 125, 160, 200 mm

Standard strokes:

25, 50, 80, 100, 125, 160, 200, 250, 320, 400, 500 mm

Non-standard strokes:

ø 32 ... 125 mm (5 ... 2800 mm)
ø 160 ... 200 mm (5 ... 2600 mm)

Operating temperature:

ø 32 ... 200 mm
"Standard version"
-10 ... +80 °C max. (+14 ... +176 °F)
ø 32 ... 200 mm
"High temperature version" (T)
0 ... +150 °C max.
(-17,7 ... +302 °F)
Air supply must be dry enough to avoid ice formation at temperatures below +2 °C (+35 °F).

Standard Materials:

Barrel: X5 Cr Ni 18 10 (1.4301; AISI 304)
End covers: X5 Cr Ni 19 10 (1.4308; AISI 304)
Piston rod: X10 Cr Ni S 18 9 (1.4305; AISI 303)
Nuts and screws: X10 Cr Ni S 18 9 (1.4305; AISI 303)
Tie rods: X5 Cr Ni 18 10 (1.4301; AISI 304)
Piston rod seals: FPM
Piston seals: PUR ø 32 ... 125 mm, NBR ø 160 ... 200 mm
Cushion seals: NBR
O-rings: FPM

The function

The new "ACS" Adaptive Cushioning System provides a high performance pneumatic damping function. The system will automatically cushion for a wide range of general applications as delivered. Manual adjustment is still possible for extreme applications.

Design and sizing in pneumatics

Golden Rules

Design and sizing in pneumatics is often based upon experience coupled with an element of fear of under specifying crucial equipment. In an attempt to ensure enough power, engineers may select over sized cylinders and then select over sized valves to supply them with enough air. The same uncertainty can also lead to over sized specification of air line equipment, fittings and tubing. The outcome is components larger than necessary that use too much compressed air and waste energy and money. However when following some well proven golden rules and a few laws of pneumatics it is easy to achieve correctly sized pneumatic installations.

Basics to Consider

The force required, the pressure available, the speed of movement and air consumption. ISO and VDMA standard or compact style also cushioning and sensors. Cylinders are greased on assembly and operate under normal conditions without additional lubrication. However using a lubricator will extend the life of these products.

Golden Rule:

The theoretical force of the cylinder should be 25% extra for high speed, 50% extra for low speed and 100% extra for ultra low speed (positioning) applications.

The correct sizing is based upon the required force and applied pressure. Go to page 1 for more information on cylinder sizing and air consumption.

Load and Buckling

For applications with high side loading, use pneumatic slide actuators or standard cylinders fitted with guide units. Alternatively external guide bearings should be installed. When a long stroke length is specified, care must be taken to ensure the rod length is within the limits for prevention of buckling. The table shows the maximum stroke length for a variety of installation arrangements.

Style 'UH': It is most important that the locking screws which secure the mounting to the tie rod are tightened to the torque figures shown in the table below.

For maximum energy input, consult our Technical Service.
Unless otherwise specified, units will be supplied with dimension 'XV' plus half the stroke length. 'XV' = Distance from the piston rod shoulder to the centre of the mounting.

- Magnetically operating reed switch - Round style
- Suitable for all cylinder ranges with magnetic piston
- Switches can be mounted flush with the delivered special adaptor
- LED indicator on LSU models
- Alternative variants allows a wide range of application

IO-Link Switch conforming to IEC 61131-9

Properties and Functionality	M/50/EAP, M/50/EAN M/50/EHP	M/50/IOP
Operating Mode	Standard	Standard IO-Link
Power LED		•
LED sensor signal	•	•
Normally open (delivery status)	•	•
Normally closed		○
Delay mode		○
Installation aid		•
Temperature measurement		•
Detection counter		•
Teach functionality		•
Responsiveness adjustment		•

Note: IODD for the M/50/IOP switches available on the Norgren homepage.

Warning

These products are intended for use in industrial compressed air systems only. Do not use these products where pressures and temperatures can exceed those listed under »**Technical features/data**«.

Before using these products with fluids other than those specified, for non-industrial applications, life-support systems or other applications not within published specifications, consult Norgren GmbH.

Through misuse, age, or malfunction, components used in fluid power systems can fail in various modes.

The system designer is warned to consider the failure modes of all component parts used in fluid power systems and to provide adequate safeguards to prevent personal injury or damage to equipment in the event of such failure.

System designers must provide a warning to end users in the system instructional manual if protection against a failure mode cannot be adequately provided.

System designers and end users are cautioned to review specific warnings found in instruction sheets packed and shipped with these products.
