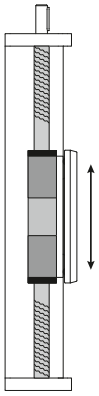
Trapezoidal or ballscrew spindle driven

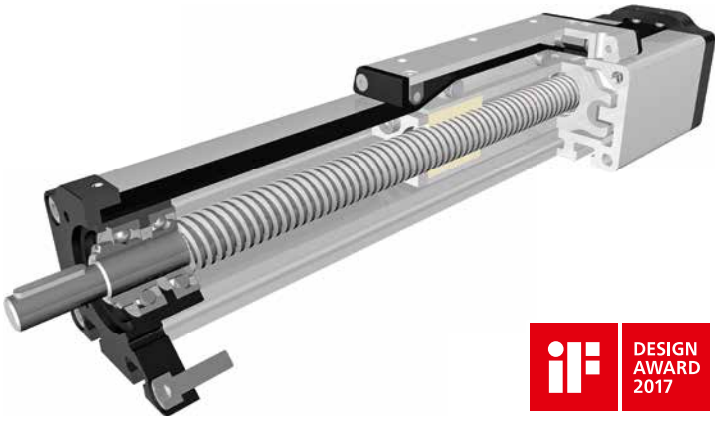
Linear system **GGT/K 90**

1.1

SPINDLE DRIVEN

- SLIDE UNIT
- LIFTING SYSTEM
- IF DESIGN AWARD 2017
- EASY CLEANING

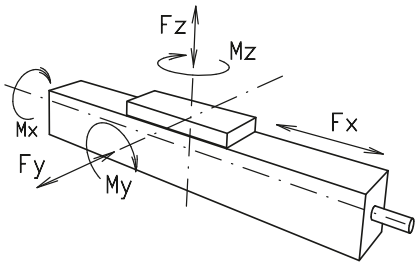




Function:
Optimized spindle axis for wheelchair lifting systems, lifting platforms and other lifting applications. The guide body consists of an aluminium square profile with an integrated sliding guide. The plastic slide bushes integrated in the carriage ensure a very low friction resistance on anodized aluminium. The carriage is moved by means of a rotating thread spindle with an assigned follower nut. The opening in the guide body is closed by a plastic cover band. This plastic cover band is abrasion-free and is pressed into the profile by means of ball bearings.

Fitting position: As required. Max. length 3.000 mm
Carriage mounting: By tapped holes in the carriage.
Unit mounting: By T-slots or tapped holes in the bearing block and mounting sets.

Forces and torques



Size	GGT/K 90	
Forces / Torques	static	dynamic
F_x (N)	4200	3500
F_y (N)	1000	900
F_z (N)	1125	1000
M_x (Nm)	82	75
M_y (Nm)	220	200
M_z (Nm)	165	150
All forces and torques relate to the following: existing values / table values $\frac{Fy}{Fy_{dyn}} + \frac{Fz}{Fz_{dyn}} + \frac{Mx}{Mx_{dyn}} + \frac{My}{My_{dyn}} + \frac{Mz}{Mz_{dyn}} \leq 1$		
No-load torque		
Trapezoidal thread	24x5	24x10
(Nm)	0,50	0,80
Ballscrew	25x5	25x10
(Nm)	0,40	0,60
Geometrical moments of inertia of aluminium profile		
I_x mm^4	11,05x10^5	
I_y mm^4	23,60x10^5	
Elastic-modulus N/mm^2	70000	

Driving torque:

$$M_a = \frac{F * P * S_i}{2000 * \pi * \mu} + M_n$$

$$P_a = \frac{M_a * n}{9550}$$

F = force (N)
P = thread pitch (mm)
Si = safety factor 1,2 … 2
M_n = no-load torque (Nm)
n = rpm of screw (min^{-1})
M_a = driving torque (Nm)
μ = screw efficiency
P_a = motor power (KW)

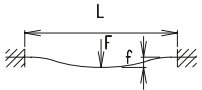
Efficiency of lead screws:

All ballscrew 0,900

Tr 24x5 0,384
Tr 24x10 0,550

Deflection:

$$f = \frac{F * L^3}{E * I * 192}$$



f = deflection (mm)
F = load (N)
L = free length (mm)
E = elastic modulus 70000 (N/mm²)
I = second moment of area (mm⁴)

For the diagram for critical speeds of lead screws refer to chapter 4.2

Richtlinie | Guideline
2014/34/EU (ATEX)
II 2G Ex h IIB T4 Gb
-20 °C ≤ Ta ≤ 60 °C

Function:
Optimized spindle axis for wheelchair lifting systems, lifting platforms and other lifting applications. The guide body consists of an aluminium square profile with an integrated sliding guide. The plastic slide bushes integrated in the carriage ensure a very low friction resistance on anodized aluminium. The carriage is moved by means of a rotating thread spindle with an assigned follower nut. The opening in the guide body is closed by a cover band. This cover band prevents dust and dirt from getting inside, it also offers a high level of safety and protects against hand injuries.

The products can be used as follows, according to the marking:
a) In Zone 2 (Gas, Category 3G, EPL Gc) in explosion groups IIA and IIB
b) In Zone 1 (Gas, Category 2G, EPL Gb) in explosion groups IIA and IIB
The qualification with regard to the surface temperature is T4; for all gases, vapours and mists with an ignition temperature > 125 °C the product is not an ignition source.

Fitting position: As required. Max. length 1.500 mm
Carriage mounting: By tapped holes in the carriage.
Unit mounting: By T-slots or tapped holes in the bearing block and mounting sets.

1.1

SPINDLE DRIVEN

- SLIDE UNIT
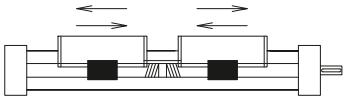
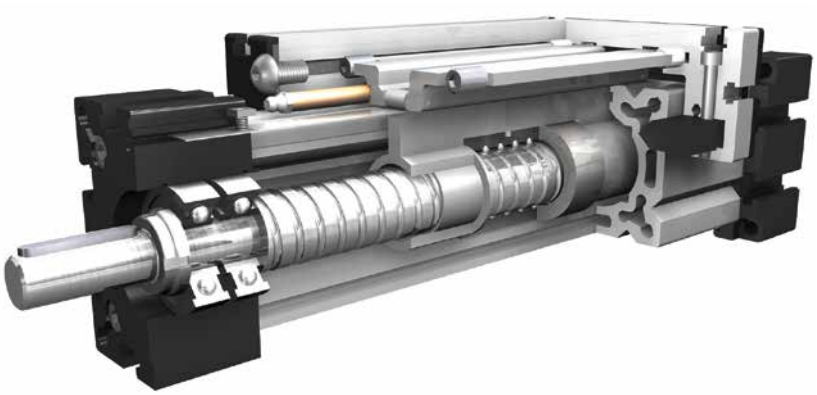
- PRECISION
- ROBUST





Function:
This unit consists of an aluminium square profile with lateral V-guides. The carriage, which is driven by means of a trapezoidal/ballscrew threaded spindle with lead screw, moves along the unit guided by V-slides that are adjustable free of play. Where two linear units are used in parallel or where two carriages are mounted on one unit, the leading-nut receiver can be used to adjust the symmetry of the carriages. The linear opening of the unit is sealed with a stainless steel cover band to make the unit splash-proof and dust-tight.

Fitting position: As required. Max. length 3.000 mm
Carriage mounting: T-slots, tapped holes (size 40)
Unit mounting: By T-slots or tapped holes in the bearing block, mounting sets.

SPINDLE DRIVEN

- SLIDE UNIT
- PRECISION
- TELESCOPIC SYSTEM

Function:
The rotary movement of the spindle is translated into a linear motion. Carriage and square tube are connected by a clamping block. The result is a telescopic movement.

Fitting position: As required. Max. length 3.000 mm
Carriage mounting: By T-slots and tapped holes
Unit mounting: By T-slots and tapped holes in the mounting surface.

Richtlinie | Guideline
2014/34/EU (ATEX)
II 2G Ex h IIB T4 Gb
-20 °C ≤ Ta ≤ 60 °C

Function:
The rotary motion of the threaded spindle is converted into a linear motion of the pressure tube. Due to the piston rod principle, high axial forces can be realised, e. g. for shelf and dosing applications. Spindle and piston rod are aligned parallel.

The products can be used as follows, according to the marking:
a) In Zone 2 (Gas, Category 3G, EPL Gc) in explosion groups IIA and IIB
b) In Zone 1 (Gas, Category 2G, EPL Gb) in explosion groups IIA and IIB
The qualification with regard to the surface temperature is T4; for all gases, vapours and mists with an ignition temperature > 125 °C the product is not an ignition source.

Mounting position: Variable, max. length 1.500 mm
Fixation: By T-nuts, mounting sets or and tapped holes in the bearing block.

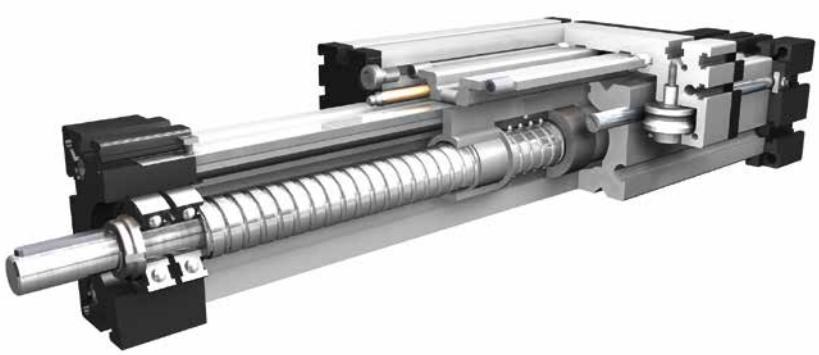
SPINDLE DRIVEN

LIFTING SYSTEM

PRECISION



Function:
This linear unit consists of an aluminium hollow section with integral, parallel ground and hardened steel guide rods. The carriage has play-adjustable ball-bearing rollers which engage with the guide rods. The rotating trapezoidal/ballscrew causes linear motion of the ballnut, which is connected to the carriage. The slot necessary for this is covered by a stainless steel strip, making the unit dust- and splash-proof. Lateral adjustment of movement for parallel units, or when two carriages are mounted on one unit, is provided by the ballnut mounting.

Fitting position: As required, max. length 3.000 mm
(EL 30 / max. 1500 mm, EL 40 / max. 2000 mm)
Carriage mounting: By T-slots and tapped holes
Unit mounting: By T-slots and tapped holes in the mounting surfaces.

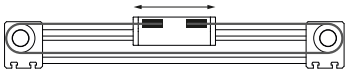
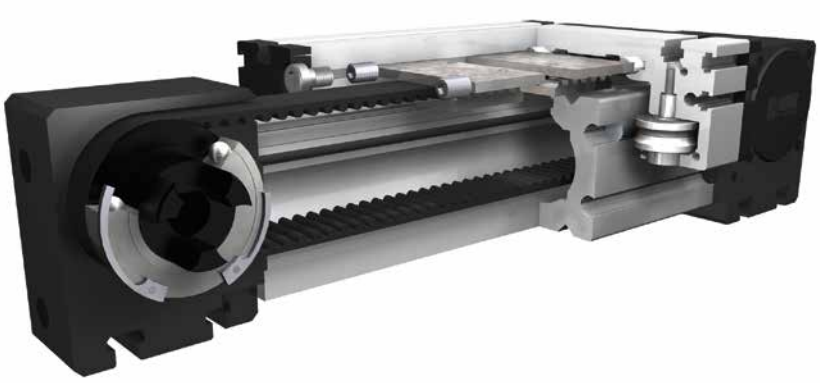
BELT DRIVE

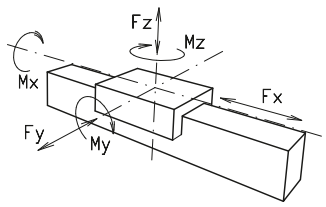
- UNIVERSAL SYSTEM
- LONG SERVICE LIFE
- HIGH SPEED
- LONG TRAVERSE PATH >6000 MM





Function:
This linear unit consists of an aluminium square profile with integrated, hardened steel guide rods. The carriage, which has internal linear ball bearings that can be adjusted free of play, is driven along the guide rods by a timing belt. The pulleys have maintenance-free ball bearings. Belt tension can be readjusted by a simple screw adjustment device in the carriage. This device can also be used for symmetrical adjustment of two or more linear units running parallel. With this series, multi-part assembled units with long strokes can be realized.

Forces and torques



Fitting position: As required. Max. length 6.000 mm without joints.
Carriage mounting: By T-slots.
Unit mounting: By T-slots or tapped holes in the bearing block, mounting sets.
Belt type: HTD with steel reinforcement, no backlash when changing direction, repeatability: ± 0,1 mm.

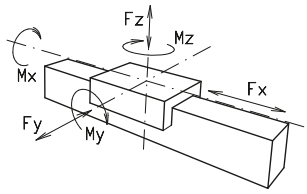
ATEX 2014/34/EU
Ex II 2G Ex h IIB T4 Gb
Ex II 3D Ex h IIIB T125 °C Dc

Function:
Like ELZ. The positioning system is suitable for use according to the intended purpose in potentially explosive areas (see ATEX 2014/34/EU marking). An operating manual is included in the scope of delivery. The system is certified for the following areas:

ATEX 2014/34/EU **II 2G EX h IIB T4 Gb:**
All application areas except for underground mining. Gas atmosphere category 2, explosion protection category: protection due to secure construction (design security). Equipment group IIB. Temperature class T4=135°C, EPL Gb.

ATEX 2014/34/EU **II 3D EX h IIIB T125 °C Dc:**
All application areas except for underground mining. Dust atmosphere category 3. Maximum permissible surface temperature: 125°C, EPL Dc.

Forces and torques



Fitting position: As required, max. length 6.000 mm.
Carriage mounting: T-slots
Unit mounting: By T-slots or tapped holes in the bearing block, mounting sets.
Belt type: HTD with steel reinforcement, no backlash when changing direction, repeatability: ± 0,1 mm.

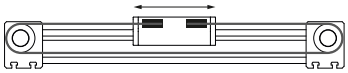
BELT DRIVE - DEEP-FREEZE AREA

- DEEP-FREEZE CONDITIONS
- LONG SERVICE LIFE
- FOOD INDUSTRY
- RELIABILITY



Operating temperature range
-30 °C ≤ -10 °C
NORDKAP

Function:
Highly dynamic linear unit with toothed belt drive and external roller guides. Reliable and low-maintenance guide system with robust track roller guide, suitable for the intended uses in deep temperature applications. Can be used without restriction in the deep temperature range between -30 °C and -10 °C. An operating manual is included in the scope of delivery.

Fitting position: As required. Max. length 6.000 mm without joints.
Carriage mounting: By T-slots.
Unit mounting: By T-slots or tapped holes in the bearing block, mounting sets.
Belt type: HTD with steel reinforcement, no backlash when changing direction, repeatability: ± 0,1 mm.

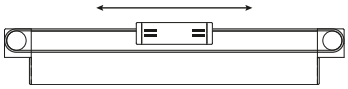
For combination kits and connecting elements refer to chapter 2.2

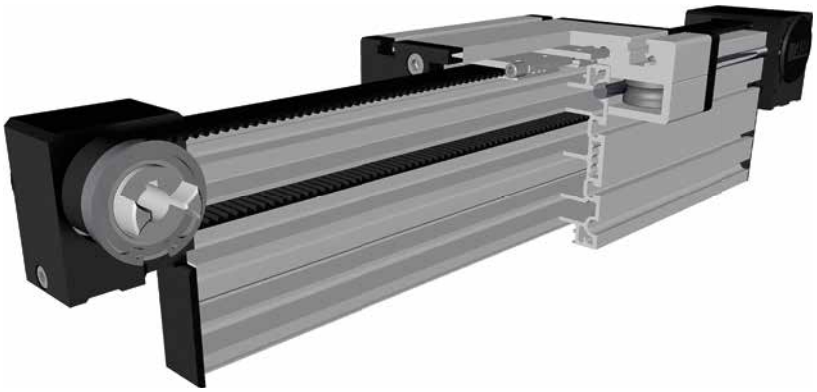
Sample ordering code:
ELZ-NK 60, standard body profile, standard carriage, coupling claw on one side, 1210 mm stroke.

Linear system **ELZ 60 (S) W**

BELT DRIVE

- HIGHER PROFILE STABILITY
- HIGHER FORCE FIXTURE
- LONG TRAVERSE PATH





Function:
The guide body consists of an aluminium square profile with lateral, parallel, form-fit, internal hardened steel rods. The guide carriage, which is driven along the shafts by a timing belt, moves on the guide body with internal linear ball bearings that are adjustable free of play. Due to the rectangular profile high torques and loads can be taken up. In addition, a very high stability and low deflection are ensured for long axis systems. The belt tension can be easily readjusted via a tensioning device within the carriage. This device also helps to adjust the symmetry of the carriages in applications where two parallel linear units are used.

Fitting position: As required. Max. length 3.000 mm without joints.
Carriage mounting: By T-slots.
Unit mounting: By T-slots or tapped holes in the bearing block, mounting sets.
Belt type: HTD with steel reinforcement, no backlash when changing direction, repeatability: ± 0,1 mm.

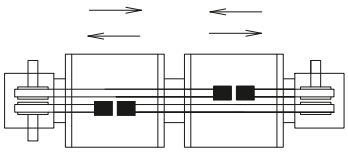
BELT DRIVE - TWO SEPARATELY DRIVEN CARRIAGES

- UNIVERSAL SYSTEM
- INDEPENDENT CARRIAGES
- HIGHER FORCE FIXTURE
- COMPACT DESIGN



Function:
This linear unit consists of an aluminium square profile with integrated, hardened steel guide rods. Each carriage can be moved separately by its own drive. This unit has twin pulleys, which run on separate bearings, and two independent, parallel drive belts, one for each carriage.

Fitting position: As required. Max. length 4.000 mm without joints.
Carriage mounting: By T-slots.
Unit mounting: By T-slots or tapped holes in the bearing block, mounting sets.
Belt type: HTD with steel reinforcement, no backlash when changing direction, repeatability ± 0,1 mm.

Sample ordering code:
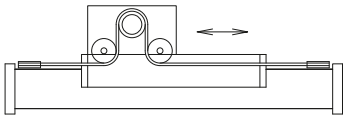
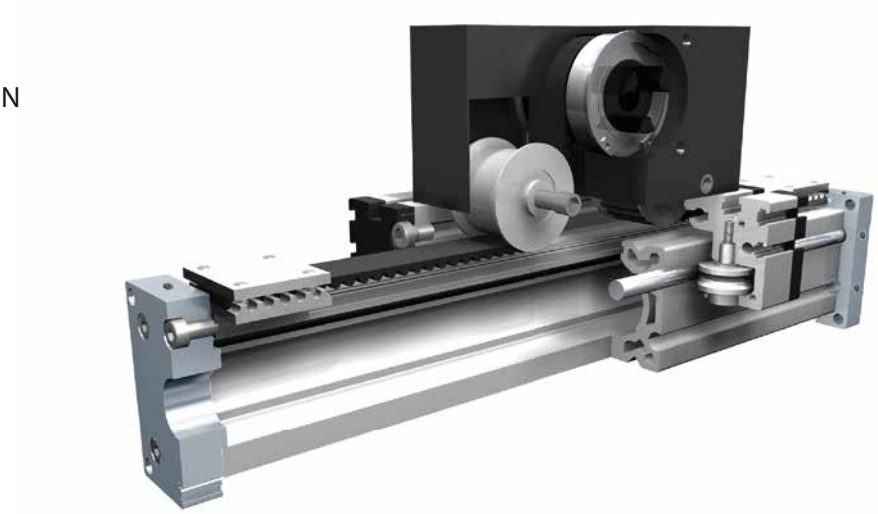
ELSZ 60 with standard body profile, standard carriage and coupling claw on one side, 1220 mm stroke.

Linear system **ELSZ 30, 40, 60, 60S, 80, 80S, 100, 125**

WITH WIDENED BELT DRIVE

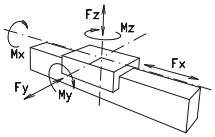
- OMEGA SYSTEM
- VERTICAL INSTALLATION POSITION
- BELT WIDENING
- HIGHER FORCE FIXTURE





Function:
This linear unit consists of an aluminium square profile with hardened steel guide rods. The carriage, which has internal linear ball bearings that can be adjusted free of play, is driven along the guide rods by a timing belt. The pulley has maintenance-free ball bearings. Belt tension can be readjusted by a simple tensioning device in one of the end blocks. This device can also be used for symmetrical adjustment of two or more linear units running parallel.

Forces and torques



Fitting position: As required. Max. length without joints 6.000 mm.
Carriage mounting: By T-slots.
Unit mounting: By T-slots, threads or tapped holes in the bearing blocks, or mounting sets.
Belt type: HTD with steel reinforcement, no backlash when changing direction, repeatability ± 0,1 mm.

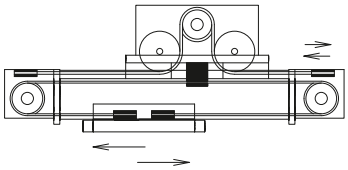
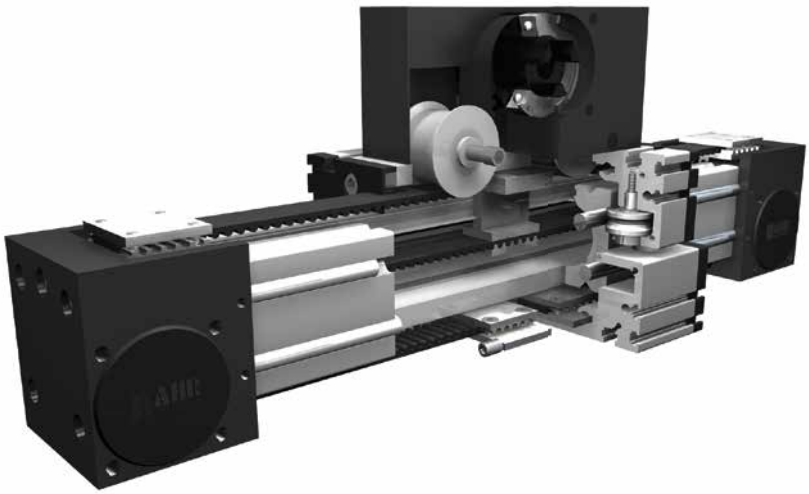
TELESCOPIC BELT DRIVE

- OMEGA SYSTEM
- TELESCOPIC SYSTEM
- VERTICAL INSTALLATION POSITION
- CANTILEVER AXIS





Function:
This unit consists of an aluminium square profile with integrated, hardened steel guide rods. Two carriages, which have internal linear ball bearings that can be adjusted free of play, are driven along the guide rods in opposite directions by 2 belts. The pulleys include maintenance-free ball bearings. One belt is tensioned by a tensioning device within the carriage. The other timing belt is tensioned by a tensioning device within the bearing block. The carriage with the drive block (with motor) is screwed to the crosshead.

Fitting position: Vertical, conditionally horizontal; Max. length 3.000 mm.
Unit mounting: By T-slots in the carriage, extension arm
Belt type: HTD with steel reinforcement, no backlash when changing direction, repeatability ± 0,1 mm.

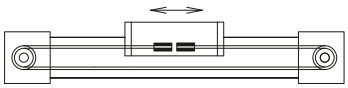
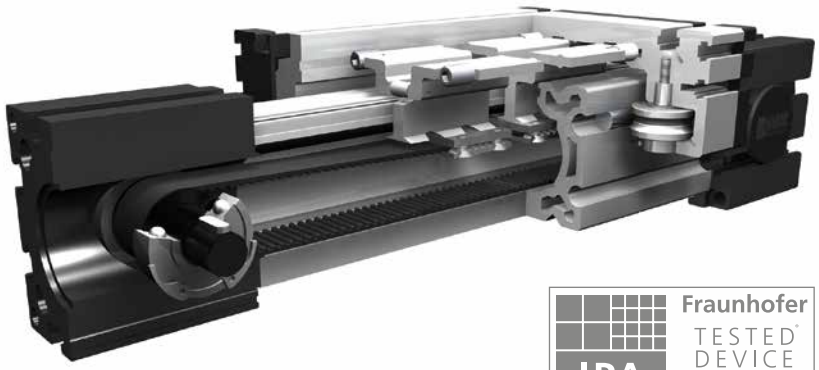
INTERNAL BELT DRIVE

- CLEAN ROOM
- TOOTHED BELT HORIZONTAL
- HIGH DYNAMICS





Fraunhofer IPA TESTED DEVICE
Lineareinheit ELHZ 60
Report No. BA 9807-151

Function:
This linear unit consists of an aluminium square profile with integrated, hardened steel guide rods. The carriage, which has internal linear ball bearings that can be adjusted free of play, is driven along the guide rods by a timing belt. Toothed pulley has maintenance-free ball bearings. Belt tension can be readjusted by a simple screw adjustment device in the carriage. This device can also be used for symmetrical adjustment of two or more linear units running parallel.
This linear unit is suitable for application in clean rooms of clean-room classification 1.000 (corresponding to US Fed. Standard 209 E).

Fitting position: As required. Max. length 3.000 mm.
Carriage mounting: By T-slots.
Unit mounting: By tapped holes or tapped holes in the bearing block, mounting sets.
Belt type: HTD with steel reinforcement, no backlash when changing direction, repeatability ± 0,1 mm.

Function:
This linear unit consists of an aluminium square profile with integrated, hardened steel guide rods. The carriage, which has internal linear ball bearings that can be adjusted free of play, is driven along the guide rods by a toothed belt. Toothed pulley has maintenance-free ball bearings. Belt tension can be readjusted by a simple screw adjustment device in the carriage. This device can also be used for symmetrical adjustment of two or more linear units running parallel. This linear unit is suitable for application in clean rooms of clean-room classification 1.000 (corresponding to US Fed. Standard 209 E).

Fitting position: As required. Max. length 3.000 mm.
Carriage mounting: By T-slots.
Unit mounting: By tapped holes or tapped holes in the bearing block, mounting sets.
Belt type: HTD with steel reinforcement, no backlash when changing direction, repeatability ± 0,1 mm.

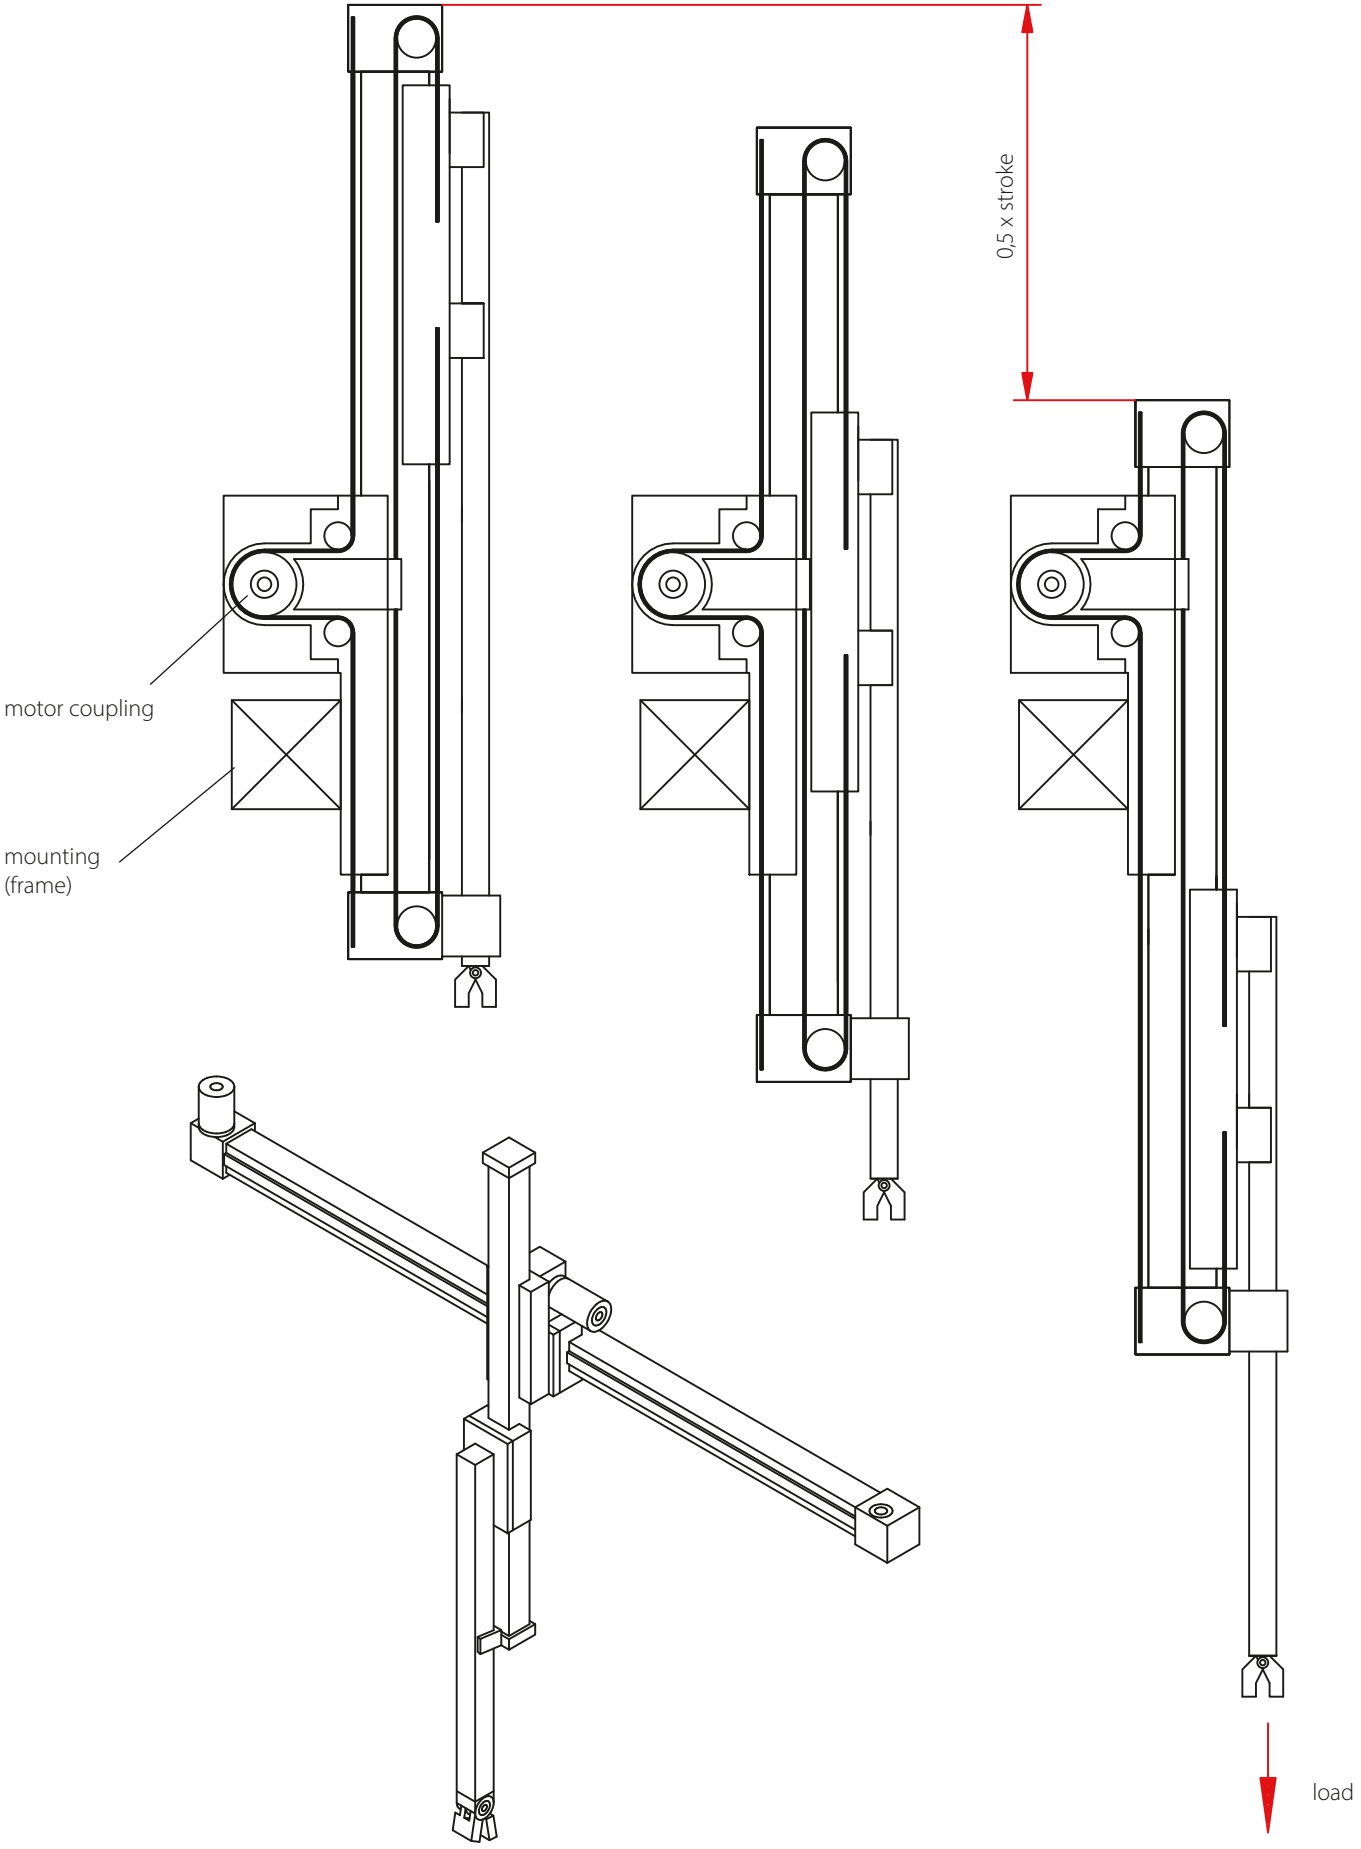
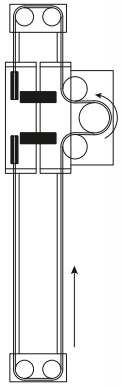
ELZT BELT DRIVE UNIT

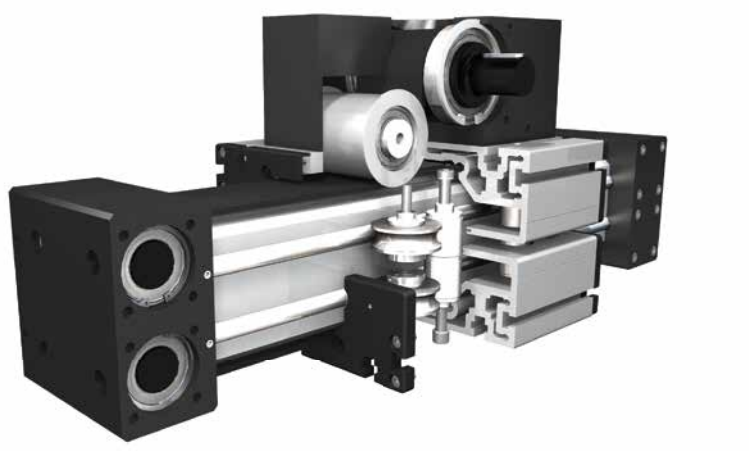


Linear system **ELFZ 60S, 80S, 100, 125**

BELT DRIVE

PULLEY PRINCIPLE
VERTICAL INSTALLATION POSITION





Function:
This special lifting unit consists of an aluminium square profile with hardened steel guide rods. The carriages, which have internal linear ball bearings that can be adjusted free of play, are driven along the guide rods by a timing belt. The rotating timing belt pulleys have maintenance-free ball bearings. One rotation of the drive pulley complies with 1/2 linear circumference of the drive pulley. Belt tension can be readjusted by a simple tensioning device in one of the carriages. This device can also be used for symmetrical adjustment of two or more linear units running parallel.

Fitting position: As required. Max. length without joints 6.000 mm.
Carriage mounting: By T-slots.
Unit mounting: By T-slots or tapped holes in the bearing blocks, or mounting sets.
Belt type: HTD with steel reinforcement, no backlash when changing direction, repeatability ± 0,1 mm.

Sample ordering code:
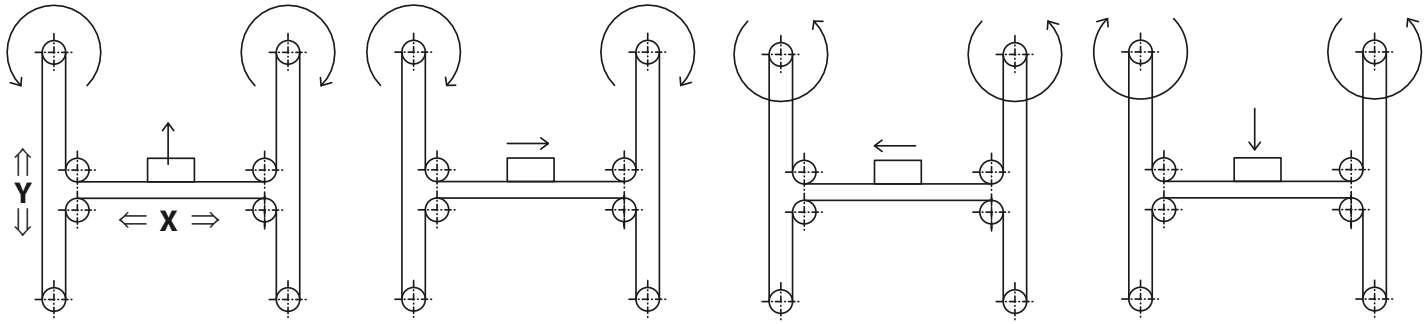
ELFZ 125 with standard body profile, standard carriage, shaft Pos. 1, 910 mm stroke

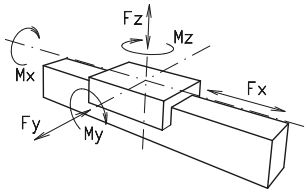
Linear system **ELZU 30, 40, 60, 60S, 80, 80S, 100**

SURFACE PORTAL



Function:
Surface portal, consisting of 2 Y-axes and 1 X-axis, driven by one rotating belt. This belt runs around different deflection pulleys. Positioning is achieved by two motors. The coordinate is diagonal to the deflection points of the Y-axis.
Advantage: Only small weights are moved, thus enabling high accelerations to be achieved.

Forces and torques



Fitting position: As required. Max. length and width 3.000 mm.
Carriage mounting: By T-slots.
Unit mounting: By T-slots or tapped holes in the bearing block, mounting sets.
Belt type: HTD with steel reinforcement, no backlash when changing direction, repeatability: ± 0,1 mm.

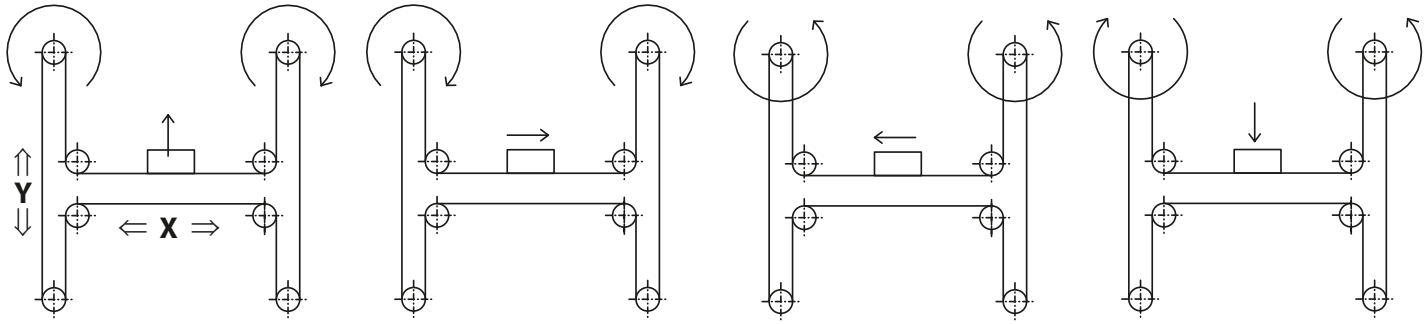
SURFACE PORTAL - STRENGTHENED CONSTRUCTION



Function:
Surface gantry consisting of two Y axes and one X axis. The unit is driven by a rotating belt, which remains connected through various deflection points. Due to the rectangular profile high torques and loads can be taken up. In addition, a very high stability and low deflection are ensured for long axis systems. The belt tension can be easily readjusted via a tensioning device within the carriage. The movement is realised by two motors. The coordinate lies diagonal to the deflection points of the X axis. Advantage: Only small masses are moved and thus it is possible to achieve high accelerations.

Fitting position: As required. Max. length and width 3.000 mm.
Carriage mounting: By T-slots.
Unit mounting: By T-slots or tapped holes in the bearing block, mounting sets.
Belt type: HTD with steel reinforcement, no backlash when changing direction, repeatability: ± 0,1 mm.

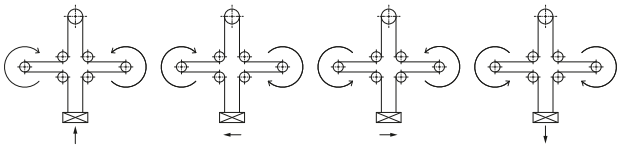
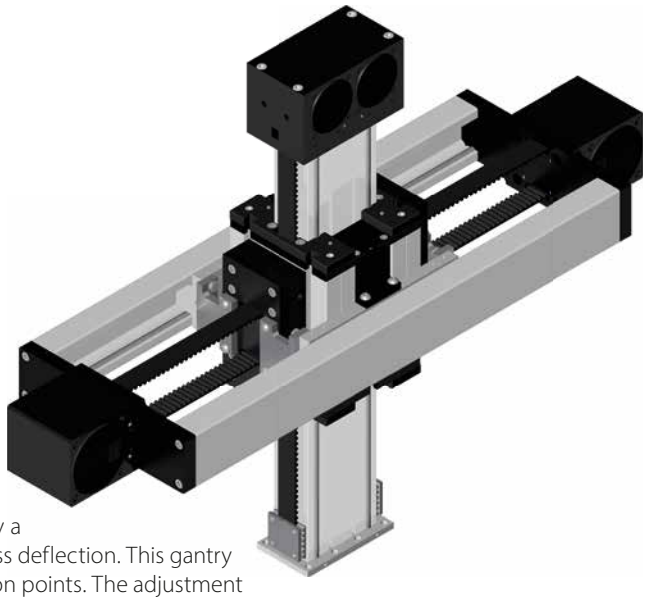
X/Z - PORTAL - REINFORCED VERSION

- BELT DRIVE
- COMPACT DESIGN
- GRIPPER ADAPTATION
- HIGH SPEED





Function:
X/Y-gantry system that consists of a double guided X-axis and a vertical Z-axis. Compared to the ELZI series (standard version), the vertical Z-axis is reinforced by a rectangular profile, which absorbs higher torques, ensures greater stability and less deflection. This gantry system is driven by only one single timing belt that runs through various deflection points. The adjustment is realized by two motors whose coordinates are diagonally orientated to these deflection points.
Key advantageous: this compact design allows high accelerations due to low movable masses.

Fitting position: As required, max. length for x-axes 2000mm, for z-axis 2000mm
Unit mounting: By tapped holes in the bearing block, mounting sets.
Belt type: HTD with steel reinforcement, no backlash when changing direction, repeatability: ± 0,1 mm.

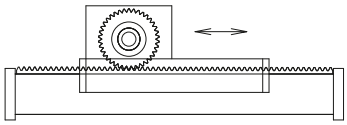
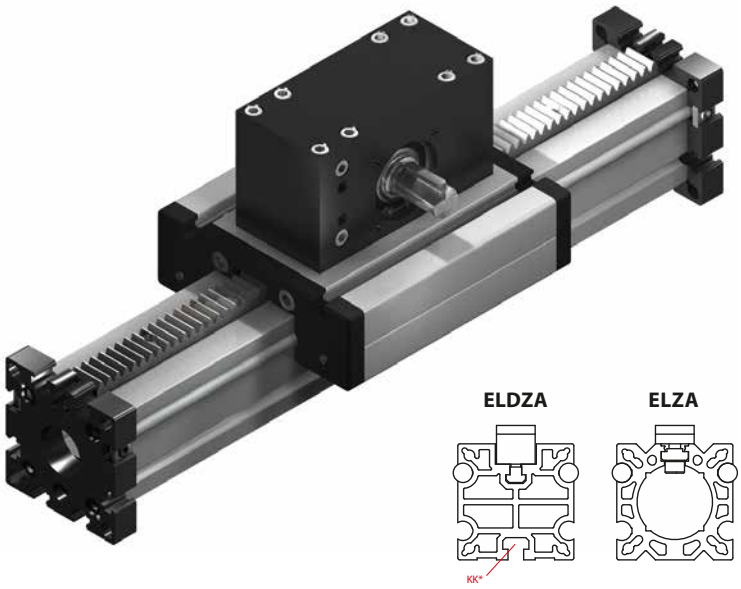
RACK AND PINION DRIVE

- HIGH LOAD CAPACITY
- LONG TRAVERSE PATH >6000 MM
- LONG SERVICE LIFE
- HIGH OPERATIONAL RELIABILITY





We have been implementing comprehensive model improvement measures so that we are able to offer our products in the segment of toothed rack drives in a more cost-effective and application-oriented way. New innovative guiding profiles ELDZA have been developed, which can be used effectively in combination with standardized toothed racks. Depending on the specific task (e. g. load, mounting position, service life or cost) it is possible to use different material combinations. With this series, multi-part assembled units with long strokes can be realized.

Function:
This unit consists of an aluminium square profile with integrated, hardened steel guide rods. The carriage, which has internal linear ball bearings that can be adjusted free of play, is driven by a rack and pinion. The pinion is equipped with maintenance-free ball bearings.

Fitting position: As required. Max. length without joints 6.000 mm.
Carriage mounting: By T-slots.
Unit mounting: By T-slots and holes in the bearing blocks, mounting sets.
Rack: C45,Steel 1.4305 or plastic (PA 6) possible. Repeatability: ± 0,2 mm.

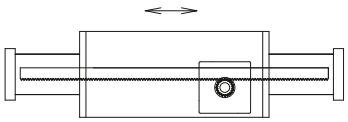
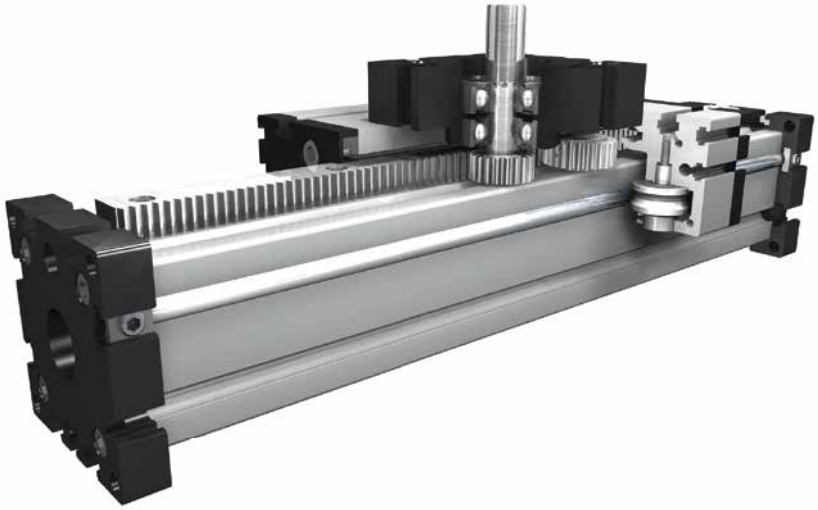
RACK AND PINION DRIVE

- HIGH LOAD CAPACITY
- HIGH RIGIDITY
- LIFTING SYSTEM
- HIGH OPERATIONAL RELIABILIT





Function:
This unit consists of an aluminium square profile with integrated, hardened steel guide rods. The carriage, which has internal linear ball bearings that can be adjusted free of play, is driven along the guide rods by a high precision rack. The rack and pinion system is suitable for highly dynamic servo operation and ideal for lifting movements. The pinion has maintenance-free ball bearings. The rack is lubricated by a toothed felt wheel.

Fitting position: As required. Max. length without joints 6.000 mm.
Carriage mounting: By T-slots.
Unit mounting: By T-slots and holes in the bearing block, mounting sets.
Rack: Cf53, h7 = finely toothed, h6 (hardened and ground, finely toothed). Repeatability: ± 0,1 mm.

BELT DRIVE

- INDEPENDENT INSTALLATION POSITION
- UNIVERSAL SYSTEM
- LONG TRAVERSE PATH >6000 MM

5.1

Function:
This linear unit consists of an aluminium square profile with integrated, hardened steel guide rods. The carriage, which has internal linear ball bearings, that can be adjusted free of play, is driven along the guide rods by a timing belt. The advantage of this system is that the belt is guided within the profile, ensuring that the belt is always tight and thus enabling the system to be operated e.g. when lying on its side. The pulleys have maintenance-free ball bearings. Belt tension can be readjusted by a simple screw adjustment device in the carriage. This device can also be used for symmetrical adjustment of two or more linear units running parallel. With this series, multi-part assembled units with long strokes can be realized.

Fitting position: As required, max. length 6.000 mm without joints.
Carriage mounting: By T-slots.
Unit mounting: By T-slots or tapped holes in the bearing block, mounting sets.
Belt type: HTD with steel reinforcement, no backlash when changing direction, repeatability: ± 0,1 mm.

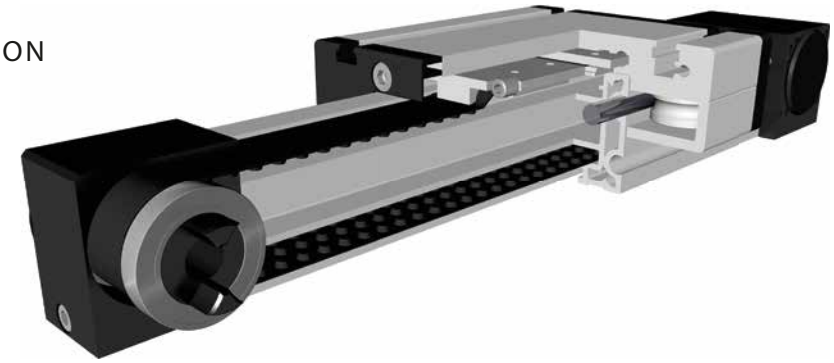
NUBBED BELT DRIVE

- INDEPENDENT INSTALLATION POSITION
- NOBBED BELT
- LOW OPERATING VOLUME
- PRECISION



5.1

Function:
The guide body consists of an aluminium square profile with lateral, parallel, form-fit, internal hardened steel rods. The guide carriage, which is driven along the shafts by a nobbed belt, moves on the guide body with internal linear ball bearings that are adjustable free of play. The advantage of this system: The belt is guided within the profile, so that the system is independent of the mounting position. The nobbed belt is self-tracking and has a very low operating noise level thanks to its nobs being offset by 45°. Furthermore, it is almost vibration-free in the transition sections.

Fitting position: As required, max. length 6.000 mm without joints.
Carriage mounting: By T-slots.
Unit mounting: By T-slots or tapped holes in the bearing block, mounting sets.
Belt type: N10 with steel reinforcement, no backlash when changing direction, repeatability: ± 0,1 mm.

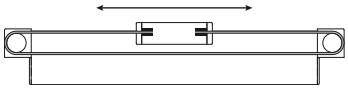
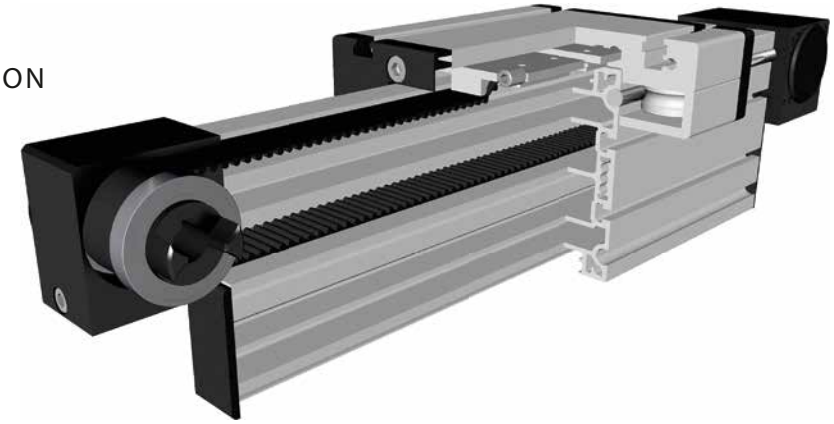
BELT DRIVE

- INDEPENDENT INSTALLATION POSITION
- HIGHER PROFILE STABILITY
- HIGHER FORCE FIXTURE
- LONG TRAVERSE PATH





5.1

Function:
The guide body consists of an aluminium square profile with lateral, parallel, form-fit, internal hardened steel rods. The guide carriage, which is driven along the shafts by a timing belt, moves on the guide body with internal linear ball bearings that are adjustable free of play. The advantage of this system: The timing belt is guided within the profile, so that the system is independent of the mounting position. Due to the rectangular profile high torques and loads can be taken up. In addition, a very high stability and low deflection are ensured for long axis systems. The belt tension can be easily readjusted via a tensioning device within the carriage. This device also helps to adjust the symmetry of the carriages in applications where two parallel linear units are used.

Fitting position: As required, max. length 6.000 mm without joints.
Carriage mounting: By T-slots.
Unit mounting: By T-slots or tapped holes in the bearing block, mounting sets.
Belt type: HTD with steel reinforcement, no backlash when changing direction, repeatability: ± 0,1 mm.

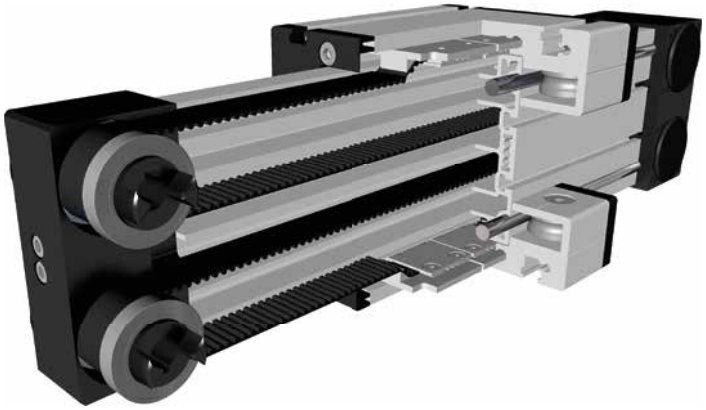
BELT DRIVE - TWO SEPARATELY DRIVEN CARRIAGES

- HIGHER PROFILE STABILITY
- INDEPENDENT CARRIAGES
- HIGHER FORCE FIXTURE
- INDEPENDENT INSTALLATION POSITION



5.1

Function:
The guide body consists of an aluminium square profile with lateral, parallel, form-fit, internal hardened steel rods. Two guide carriages, each with its own drive, move along the guide body. The timing belt is guided within the profile, so that it is independent of the mounting position. Due to the high rectangular profile high torques and loads can be taken up. In addition, a very high stability is ensured for long axis systems. The toothed pulleys have maintenance-free ball bearings. The belt tension can be easily readjusted via a tensioning device within the carriage. This device also helps to adjust the symmetry of the carriages in applications where two parallel linear units are used.

Fitting position: As required, max. length 6.000 mm without joints.
Carriage mounting: By T-slots.
Unit mounting: By T-slots or tapped holes in the bearing block, mounting sets.
Belt type: HTD with steel reinforcement, no backlash when changing direction, repeatability: ± 0,1 mm.

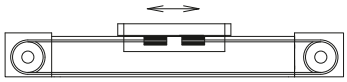
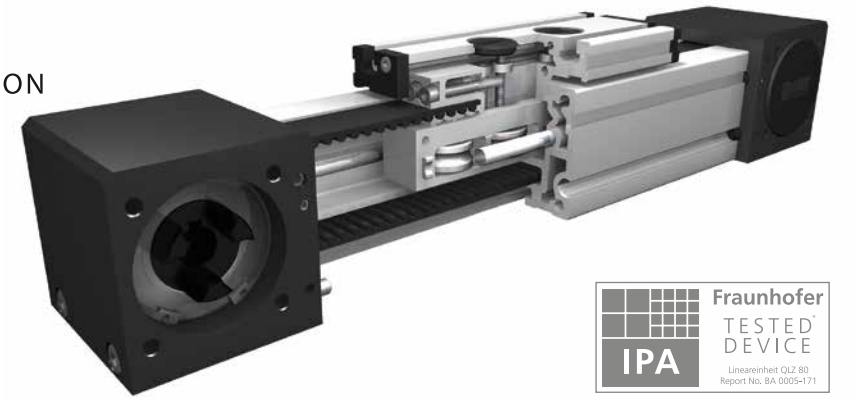
BELT DRIVE

- INDEPENDENT INSTALLATION POSITION
- LONG TRAVERSE PATH >6000 MM
- CLEAN ROOM





Fraunhofer IPA TESTED DEVICE
Lineareinheit QLZ 80
Report No. BA 0005-171

Function:
This unit consists of a square aluminium profile with an integrated roller guide. The carriage is driven by a timing belt. Each standard pulley includes one coupling claw on one side. Belt tension can be readjusted by a simple screw adjustment device in the carriage. This device can also be used for symmetrical adjustment of two or more linear units running parallel. This linear unit is suitable for application in clean rooms of clean-room classification 1.000 (corresponding to US Fed. Standard 209 E). With this series, multi-part assembled units with long strokes can be realized.

Fitting position: As required. Max. length 6.000 mm without joints.
Carriage mounting: By T-slots.
Unit mounting: By T-slots and mounting sets. The linear axis can be combined with any T-slot profile.
Belt performance: HTD with steel reinforcement, no backlash when changing direction, repeatability ± 0,1 mm.
Carriage support: In the standard version, the carriage runs on 4 rollers which can be adjusted and serviced at a central servicing position. For longer carriages the number of rollers can be increased.

BELT DRIVE

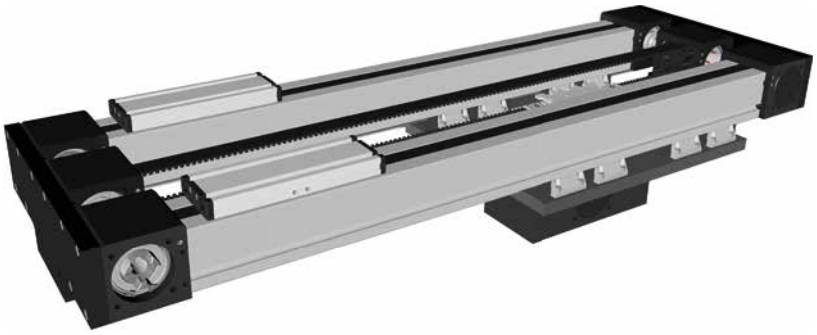
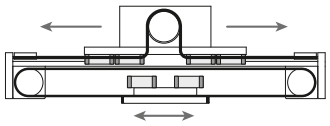
HORIZONTAL TELESCOPIC SYSTEM

HIGH RIGIDITY

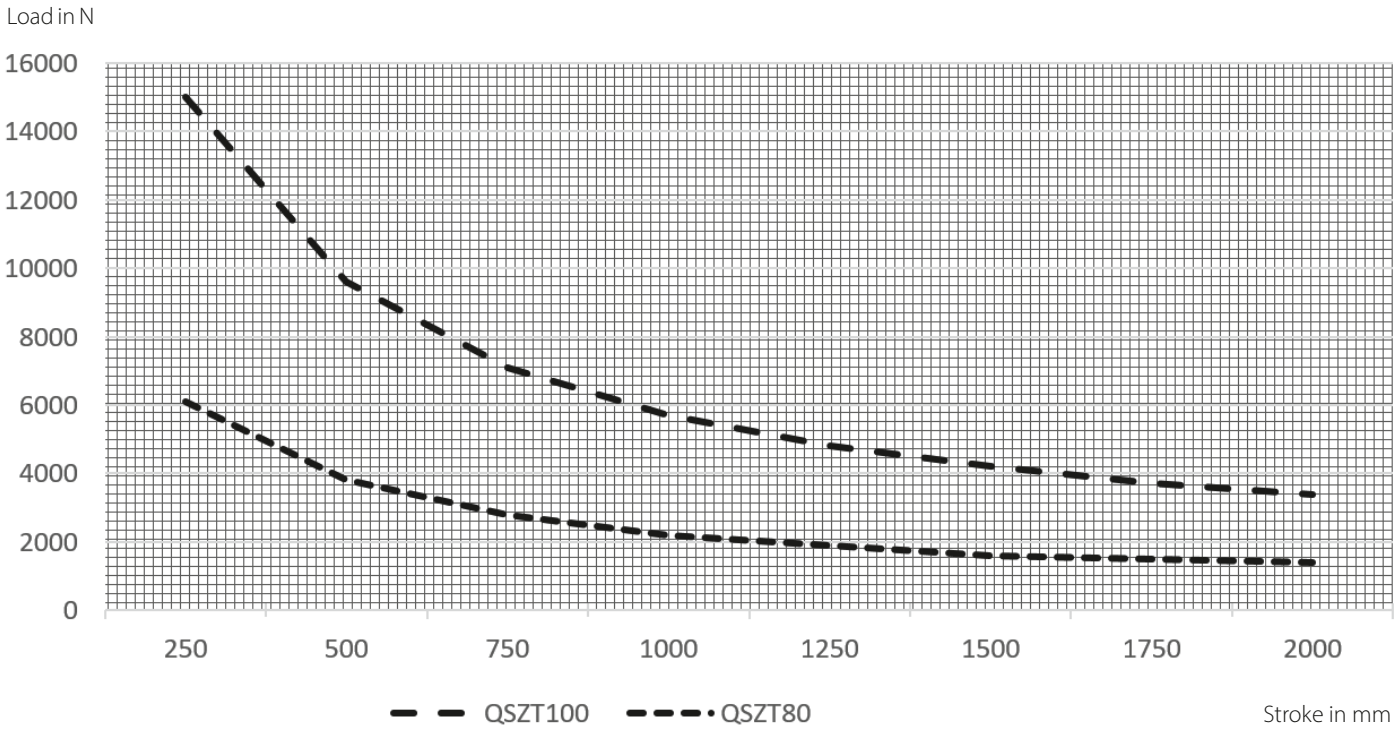




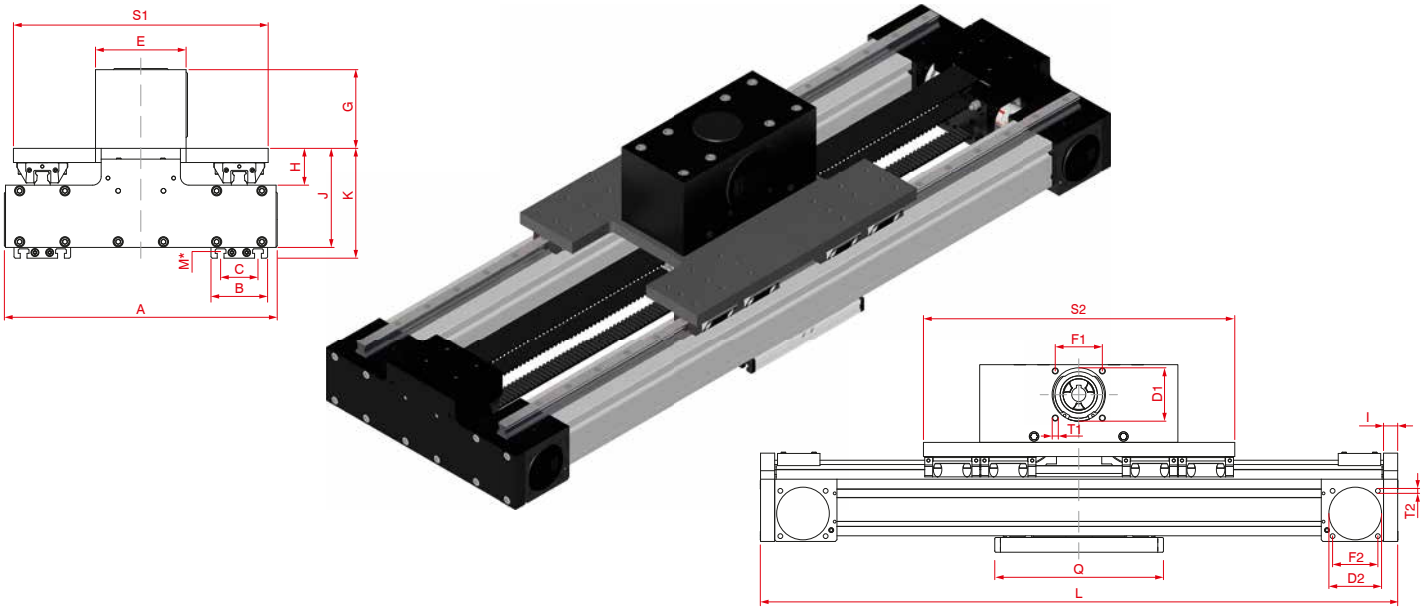
Function:
Linear unit consisting of two parallel QSZ axes. The carriage, which is connected to the runner blocks, is moved by means of a toothed belt. The belt tension can be easily readjusted via a tensioning device within the carriage. This device also helps to adjust the symmetry of the carriages. The system is driven by a central toothed belt with Omega deflection, and the special connection of the toothed belts results in a telescopic movement. The toothed pulley is equipped with maintenance-free ball bearings. The belt tension can be easily readjusted via a tensioning device on the bottom side. This linear system is designed for high loads.

7.1

Fitting position:	Preferably horizontal, Max. length 3.000 mm without joints.
Carriage mounting:	By T-slots.
Unit mounting:	By mounting sets.
Belt performance:	HTD with steel reinforcement, no backlash when changing direction, repeatability ± 0,1 mm.
Carriage support:	In the standard version, the carriage runs on voer runner blocks which can be adjusted and serviced at a central servicing position. For longer carriages the number of runner blocks can be increased.



Linear system **QSZT 80, 100**



V = Q + 100 mm W = servicing position

*For slide nuts refer to chapter 2.2 page 2

Increasing the carriage length will increase the basic length by the same amount.

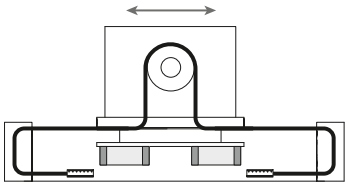
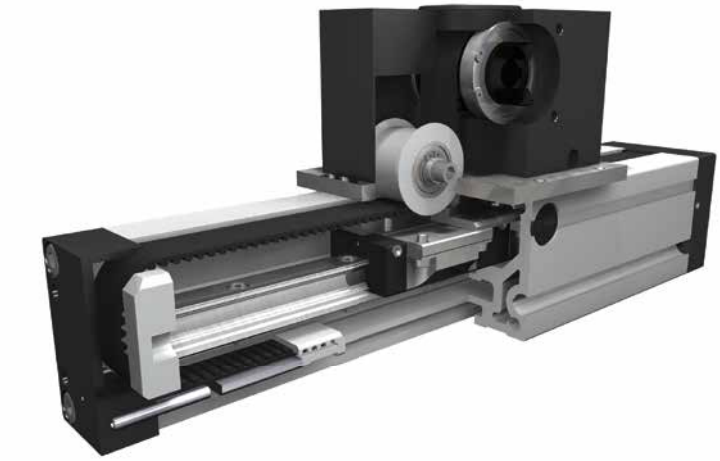
BELT DRIVE

Ω OMEGA SYSTEM

CLEAN ROOM





Function:
This linear unit consists of a square aluminium profile with integrated rail guidance. The carriage, which has runner blocks, is driven by a timing belt. Each standard pulley includes a coupling claw on one side and is equipped with maintenance-free ball bearings. Belt tension can be readjusted by a simple screw adjustment device in the carriage. This device can also be used for symmetrical adjustment of two or more linear units running parallel.

Fitting position: As required. Max. length 3.000 mm without joints.
Carriage mounting: By T-slots.
Unit mounting: By T-slots and mounting sets. The linear axis can be combined with any T-slot profile.
Belt performance: HTD with steel reinforcement, no backlash when changing direction, repeatability ± 0,1 mm.
Carriage support: In the standard version, the carriage runs on 2 runner blocks which can be serviced at a central servicing position. For longer carriages the number of runner blocks can be increased.

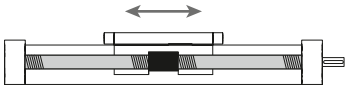
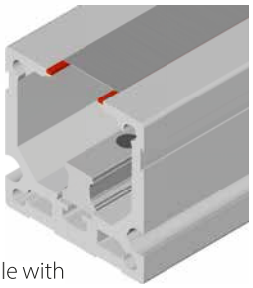
SPINDLE DRIVES

CLEAN ROOM

PRECISION





Fraunhofer TESTED DEVICE IPA Bahr Modultechnik GmbH Positioningsystem QSK 80 Report No. BA 0610-367

Function:
This unit consists of a square aluminium profile with an integrated ball rail. The carriage is driven by means of a rotating spindle with leading nut. The openings of the guide body are sealed by a stainless steel cover band to protect the drive from splash water and dust.
In size 80, the cover tape is additionally secured with magnetic tapes (see detail picture, marked in red). High positioning and repeat accuracy. Inrestricted installation position, flexible use as a vertical axis in a gantry system with short lifting movements and higher loads. This linear unit is suitable for application in clean rooms of clean-room classification ISO class 1 (according to DIN EN ISO 14644-1).

7.1

Fitting position: As required, max. length 3000mm
Carriage connection: By T-slots
Unit mounting: By half round slots and tapped holes in the bearing blocks, mounting sets.

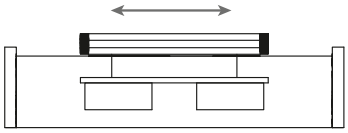
RAIL GUIDE

- WITHOUT DRIVE
- SUPPORT UNIT
- WITHOUT COVERBAND



Function:
This unit consists of a square aluminium profile with an integrated ball rail. This unit can be driven by a pneumatic cylinder or other additional drives or it serves as a load carrying slide unit. Construction compatible with QSZ.

Fitting position: As required. Max. length 6.000 mm without joints.
Carriage mounting: By T-slots.
Unit mounting: By T-slots and mounting sets. The linear axis can be combined with any T-slot profile.
Carriage support: In the standard version, the carriage runs on two runner blocks which can be adjusted and serviced at a central servicing position. For longer carriages the number of runner blocks can be increased.

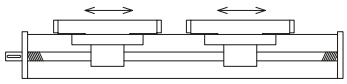
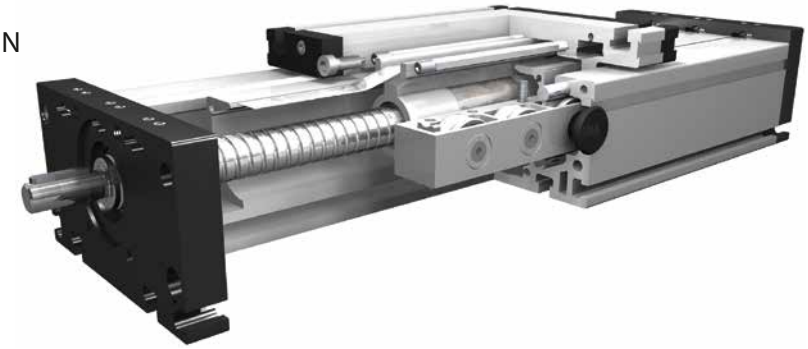
DL
Roller guide

Linear system **DLT/DLK 120, 160, 200**

SPINDLE DRIVE

- INDEPENDENT INSTALLATION POSITION
- PRECISION
- UNIVERSAL SYSTEM





Function:
This unit consists of a rectangular aluminium profile with 2 integrated roller guides. The carriage is driven by means of a rotating spindle with leading nut. Where two parallel linear units are used or where two carriages are mounted on one unit, the leading-nut receiver can be used to adjust the symmetry of the carriages. The openings of the guide body are sealed with 3 stainless steel cover bands to protect the drive from splash water and dust.

Fitting position: As required. Max. length 3.000 mm without joints.
Carriage mounting: By T-slots.
Unit mounting: By T-slots and mounting sets. The linear axis can be combined with any T-slot profile.
Carriage support: In the standard version, the carriage runs on 8 rollers which can be adjusted and serviced at a central servicing position. For longer carriages the number of rollers can be increased. Repeatability ballscrew ± 0,025 mm, trapezoidal thread ± 0,2 mm.

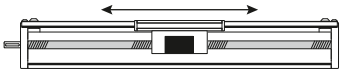
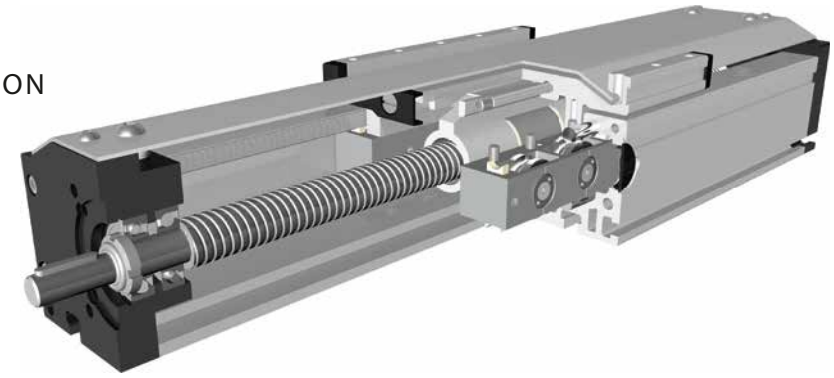
SPINDLE DRIVE

- INDEPENDENT INSTALLATION POSITION
- PRECISION
- COVER PROFILE





Function:
This unit consists of a rectangular aluminium profile with 2 integrated roller guides. The carriage is driven by means of a rotating spindle with leading nut. Where two parallel linear units are used or where two carriages are mounted on one unit, the leading-nut receiver can be used to adjust the symmetry of the carriages. A special curved aluminium sheet is covering the carriage side. There is only a small gap between carriage and aluminium sheet.

Fitting position: As required. Max. length DLT/K 120P / 1600mm, DLT/K 160P / 1800mm, DLT/K 200P / 2000mm
Carriage mounting: By tapped holes in the carriage.
Unit mounting: By T-slots and mounting sets. The linear axis can be combined with any T-slot profile.
Carriage support: In the standard version, the carriage runs on 8 rollers which can be adjusted and serviced at a central servicing position. For longer carriages the number of rollers can be increased. Repeatability ballscrew ± 0,025 mm, trapezoidal thread ± 0,2 mm.

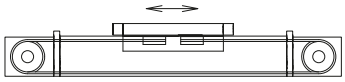
BELT DRIVE

- CLEAN ROOM
- UNIVERSAL SYSTEM
- LONG TRAVERSE PATH >6000 MM



COLANDIS
the clean air company

Function:
This unit consists of a rectangular aluminium profile with 2 integrated roller guides. The carriage is moved by a belt drive. Each standard pulley has got one coupling claw on one side. Belt tension can be readjusted by a simple screw adjustment device in the carriage. This device can also be used for symmetrical adjustment of two or more linear units running parallel. The openings of the guide body are sealed with 3 stainless steel cover bands to protect the guide from splash water and dust. Alternatively, the opening can also be covered with a bellow or can be delivered without cover bands. With this series, multi-part assembled units with long strokes can be realized.

Fitting position: As required. Max. length 6.000 mm without joints.
Carriage mounting: By T-slots.
Unit mounting: By T-slots and mounting sets. The linear axis can be combined with any T-slot profile.
Belt type: HTD with steel reinforcement, no backlash when changing direction, repeatability ± 0,1 mm.
Carriage support: In the standard version, the carriage runs on 8 rollers which can be adjusted and serviced at a central servicing position. For longer carriages the number of rollers can be increased.

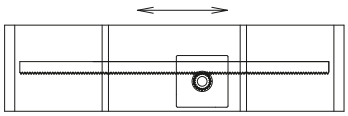
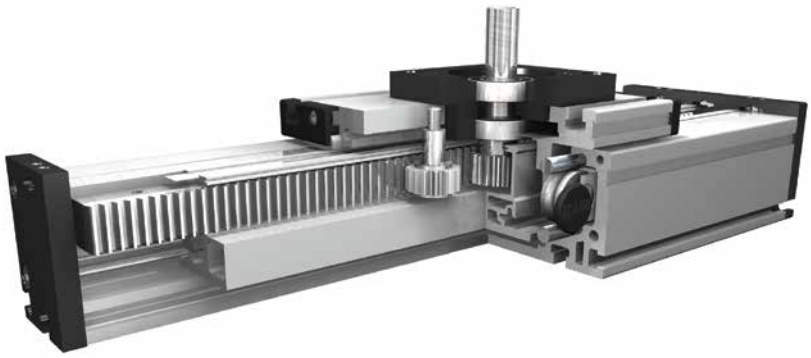
RACK AND PINION DRIVE

- HIGH LOADS
- HIGH DYNAMICS
- LONG TRAVERSE PATH >6000 MM
- SPACE SAVING





Function:
This unit consists of a rectangular aluminium profile with 2 integrated roller guides. The carriage, which has internal linear ball bearings that can be adjusted free of play, is driven along the guide rods by a high precision rack. The rack and pinion system is suitable for highly dynamic servo operation and ideal for lifting movements. The pinion is equipped with maintenance-free ball bearings. The rack is lubricated by a toothed felt wheel. With this series, multi-part assembled units with long strokes can be realized.

Fitting position: As required. Max. length 6.000 mm without joints.
Carriage mounting: By T-slots.
Unit mounting: By T-slots and mounting sets. The linear axis can be combined with any T-slot profile.
Rack: 6h23 Modul 2 (hardened and ground), repeatability ± 0,1 mm.
Carriage support: In the standard version, the carriage runs on 8 rollers which can be adjusted and serviced at a central servicing position. For longer carriages the number of rollers can be increased.

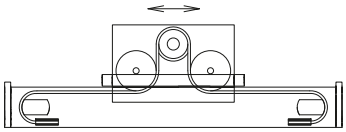
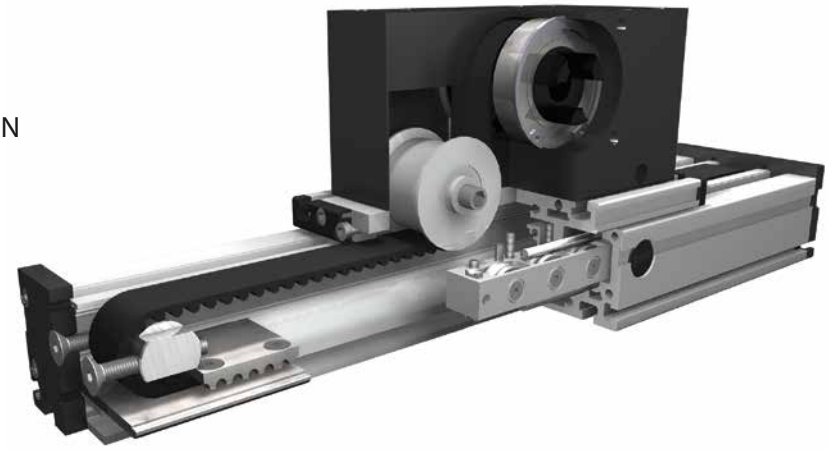
BELT DRIVE

- OMEGA SYSTEM
- HORIZONTAL INSTALLATION POSITION
- OFF-CENTER LOADS





Function:
This linear unit consists of a rectangular aluminium profile with integrated, hardened steel guide rods. The carriage, which has linear ball bearings that can be adjusted free of play, is driven along the guide rods by a timing belt. Each standard pulley includes a coupling claw on one side and is equipped with maintenance-free ball bearings. Belt tension can be readjusted by a simple screw adjustment device in the carriage. This device can also be used for symmetrical adjustment of two or more linear units running parallel. Compared to conventional toothed belt drives, the drive connection is offset by 90 °.

Fitting position: As required. Max. length 6.000 mm without joints.
Carriage mounting: By T-slots.
Unit mounting: By T-slots and mounting sets. The linear axis can be combined with any T-slot profile.
Belt performance: HTD with steel reinforcement, no backlash when changing direction, repeatability ± 0,1 mm.
Carriage support: In the standard version, the carriage runs on 8 rollers which can be adjusted and serviced at a central servicing position. For longer carriages the number of rollers can be increased.

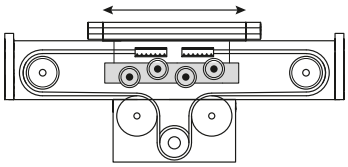
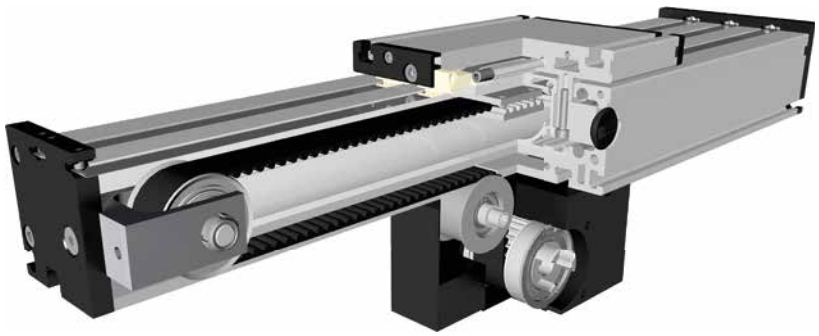
BELT DRIVE

- OMEGA SYSTEM
- VERTICAL INSTALLATION POSITION
- LIFTING SYSTEM





Function:
This unit consists of a rectangular aluminium profile with 2 integrated roller guides. The carriage is moved by a belt drive. An innovation is that the toothed belt is diverted within a drive block positioned centrically. The result is an enormous compactness with regard to the overall system length. The toothed drive pulley has a coupling claw in the standard version. Belt tension can be readjusted by a simple screw adjustment device in the carriage. This device can also be used for symmetrical adjustment of two or more linear units running parallel. The openings of the guide body are sealed with 3 stainless steel cover bands to protect the guide from splash water and dust. Use: compact and space-saving system with variable position of the drive block.

Fitting position: As required. Max. length 6.000 mm without joints.
Carriage mounting: By T-slots.
Unit mounting: By T-slots and mounting sets. The linear axis can be combined with any T-slot profile.
Belt type: HTD with steel reinforcement, no backlash when changing direction, repeatability ± 0,1 mm.
Carriage support: In the standard version, the carriage runs on 8 rollers which can be adjusted and serviced at a central servicing position. For longer carriages the number of rollers can be increased.

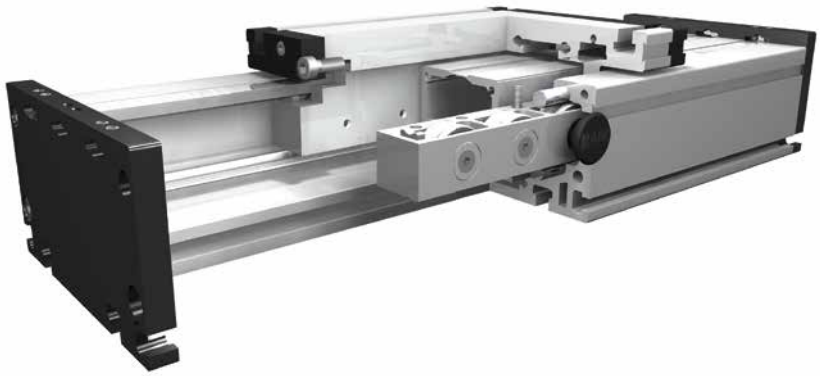
Sample ordering code:
DLZS160 with internal profile and cover bands, standard carriage, coupling claw on one side, 1200 mm stroke.

Linear system **DLR 120, 160, 200**

ROLLER UNIT

- WITHOUT DRIVE
- SUPPORT UNIT



Function:
This unit consists of a rectangular aluminium profile with 2 integrated roller guides. The openings of the guide body are sealed with 3 stainless steel cover bands to protect the guide from splash water and dust. Alternatively, the opening can also be covered with a bellow or can be delivered without cover bands. The roller guide can be either driven by an internal pneumatic cylinder or other additional drives or it serves as load carrying linear slide.

Fitting position: As required. Max. length 6.000 mm without joints.
Carriage mounting: By T-slots.
Unit mounting: By T-slots and mounting sets. The linear axis can be combined with any T-slot profile.
Carriage support: In the standard version, the carriage runs on 8 rollers which can be adjusted and serviced at a central servicing position. For longer carriages the number of rollers can be increased.

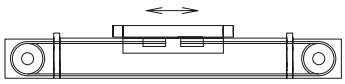
BELT DRIVE

UNIVERSAL SYSTEM

LONG TRAVERSE PATH >6000 MM



Function:
This unit consists of a rectangular aluminium profile with 2 integrated rail guidess. The carriage is moved by a belt drive. Each standard pulley has got one coupling claw on one side. Belt tension can be readjusted by a simple screw adjustment device in the carriage. This device can also be used for symmetrical adjustment of two or more linear units running parallel. The openings of the guide body are sealed with 3 stainless steel cover bands to protect the guide from splash water and dust. Alternatively, the opening can also be covered with a bellow or can be delivered without cover bands. With this series, multi-part assembled units with long strokes can be realized.

Fitting position: As required. Max. length 6.000 mm without joints.
Carriage mounting: By T-slots.
Unit mounting: By T-slots and mounting sets. The linear axis can be combined with any T-slot profile.
Belt type: HTD with steel reinforcement, no backlash when changing direction, repeatability ± 0,1 mm.
Carriage support: In the standard version, the carriage runs on 4 runner blocks which can be serviced at a central servicing position. For longer carriages the number of runner blocks can be increased.

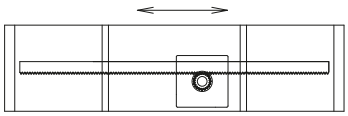
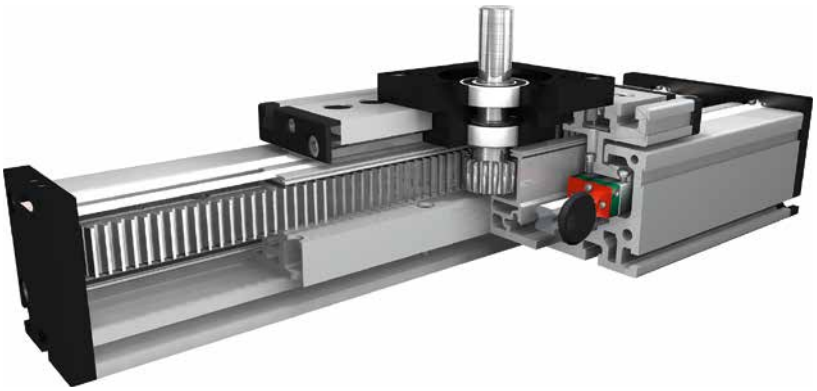
RACK AND PINION DRIVE

- HIGH LOADS
- HIGH DYNAMICS
- LONG TRAVERSE PATH >6000 MM
- SPACE SAVING





Function:
This unit consists of a rectangular aluminium profile with 2 integrated rail guides. The carriage is driven by a pinion on a high precision rack. The rack and pinion system is suitable for highly dynamic servo operation and ideal for lifting movements. The pinion is equipped with maintenance-free ball bearings. The rack is lubricated by a toothed felt wheel. With this series, multi-part assembled units with long strokes can be realized.

Fitting position: As required. Max. length 6.000 mm without joints.
Carriage mounting: By T-slots.
Unit mounting: By T-slots and mounting sets. The linear axis can be combined with any T-slot profile.
Rack: 6h23 Modul 2 (hardened and ground), repeatability ± 0,1 mm.
Carriage support: In the standard version, the carriage runs on 4 runner blocks which can be serviced at a central servicing position. For longer carriages the number of runner blocks can be increased.

Function:
This unit consists of a rectangular aluminium profile with 2 integrated rail guides. The carriage is moved by a belt drive. On the drive side the pulley is beared on the shaft of a planetary gear. Belt tension can be readjusted by a simple screw adjustment at the opposite side of the drive. A special curved aluminium sheet is covering the carriage side. There is only a small gap between carriage and aluminium sheet. Because of its special design it is possible to drive the carriage over the pulley areas. This fact is making the unit very compact.

Fitting position: As required, max. length **DSZPVI** 120 / 1600mm, **DSZPVI** 160 / 1800mm, **DSZPVI** 200 / 2000mm
Carriage mounting: By tapped holes.

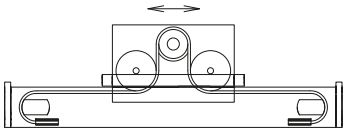
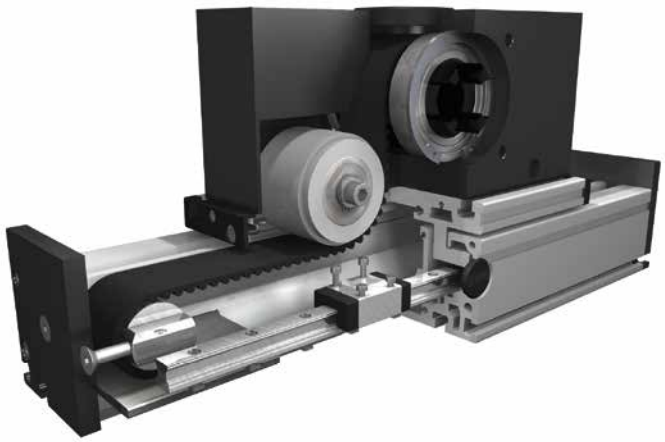
BELT DRIVE

- OMEGA SYSTEM
- HORIZONTAL INSTALLATION POSITION
- OFF-CENTER LOADS





Function:
This linear unit consists of a rectangular aluminium profile with integrated rail guides. The carriage, which has runner blocks, is driven by a timing belt. Each standard pulley includes a coupling claw on one side and is equipped with maintenance-free ball bearings. Belt tension can be readjusted by a simple screw adjustment device in the carriage. This device can also be used for symmetrical adjustment of two or more linear units running parallel.

Fitting position: As required. Max. length 6.000 mm without joints.
Carriage mounting: By T-slots.
Unit mounting: By T-slots and mounting sets. The linear axis can be combined with any T-slot profile.
Belt performance: HTD with steel reinforcement, no backlash when changing direction, repeatability ± 0,1 mm.
Carriage support: In the standard version, the carriage runs on 4 runner blocks which can be serviced at a central servicing position. For longer carriages the number of runner blocks can be increased.

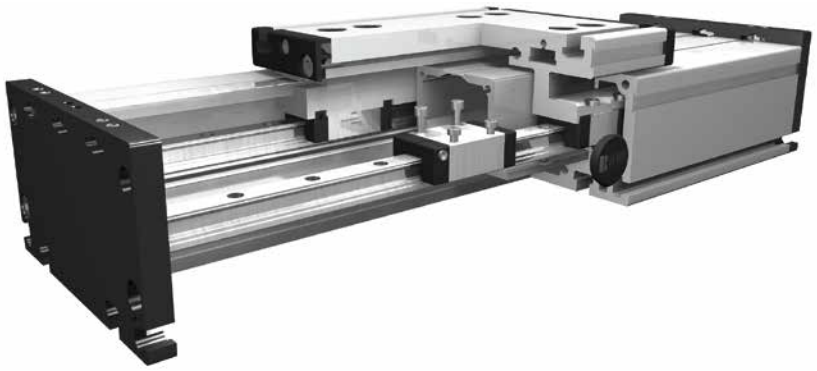
RAIL GUIDE

- WITHOUT DRIVE
- SUPPORT UNIT



Function:
This unit consists of a rectangular aluminium profile with 2 integrated rail guidess. The openings of the guide body are sealed with 3 stainless steel cover bands to protect the guide from splash water and dust. Alternatively, the opening can also be covered with a bellow or can be delivered without cover bands. The positioning system can be either driven by an internal pneumatic cylinder or other additional drives or it serves as load carrying linear slide. Construction compatible with DSZ.

Fitting position: As required. Max. length 6.000 mm without joints.
Carriage mounting: By T-slots.
Unit mounting: By T-slots and mounting sets. The linear axis can be combined with any T-slot profile.
Carriage support: In the standard version, the carriage runs on 4 runner blocks which can be adjusted and serviced at a central servicing position. For longer carriages the number of runner blocks can be increased.

BELT DRIVE

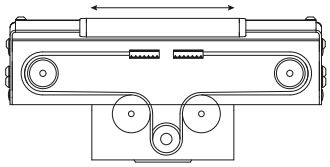
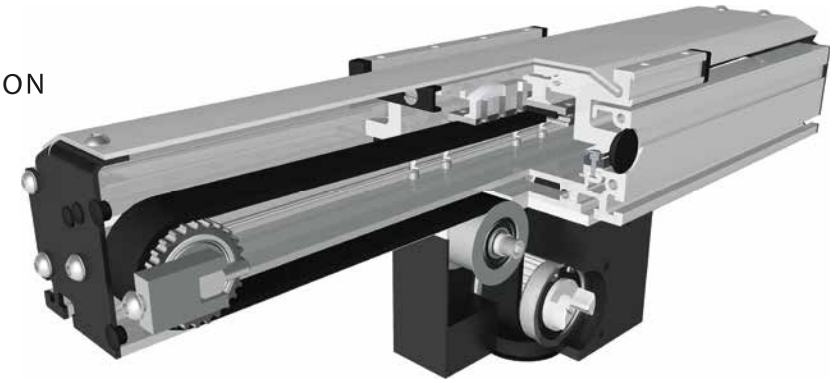
- INDEPENDENT INSTALLATION POSITION
- OMEGA SYSTEM
- LIFTING SYSTEM
- COVER PROFILE





Function:
The guide body consists of a rectangular aluminium profile with two integrated rail guides. The carriage, which is running on four runner blocks, is driven by a revolving timing belt. The novelty is that the timing belt is diverted into a drive block positioned centrically. This results in an extraordinary compactness with regard to the overall length of the system. The driving toothed pulley is provided with a coupling claw as a standard. The belt tension can be easily readjusted via a tensioning device within the bearing block. The openings in the guide body are closed by an aluminium profile, leaving only small slits open on the sides. The cover profile can be adjusted according to the mounting position.
The advantages compared to the DSZS positioning system are: The number of components prone to wear such as cover bands and sliding blocks is reduced and the fact that there is no friction makes it possible to use smaller motors. In addition, the cover profile, which is fixed with only a few screws, improves the serviceability and maintainability.

Fitting position: As required. Max. length DSZS 120P / 1600mm, DSZS 160P / 1800mm, DSZS 200P / 2000mm
Carriage mounting: By tapped holes.
Unit mounting: By T-slots and mounting sets. The linear axis can be combined with any T-slot profile.
Belt type: HTD with steel reinforcement, no backlash when changing direction, repeatability ± 0,1 mm.
Carriage support: In the standard version, the carriage runs on 4 runner blocks which can be serviced at a central servicing position. For longer carriages the number of runner blocks can be increased.

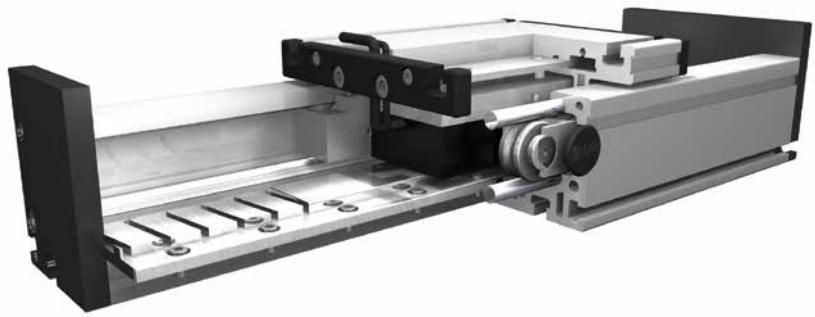
LINEAR MOTOR DRIVE

- ROLLER GUIDE
- HIGH DYNAMICS
- HIGH REPEAT ACCURACY
- LONG TRAVERSE PATH
- INDEPENDENT CARRIAGES



Function:
This unit consists of a rectangular aluminium profile with 2 integrated roller guides. The linear motor DLM unit is based on the principle of a linear, synchronous AC motor. The guiding profile is fitted with permanent magnets as stator (secondary part). The carriage is fitted with the actuator (primary part). The magnetic attraction causes a force between carriage and guiding profile also in the absence of current. This force can be used for the initial tension of the bearings. Several carriages (primary parts) can be driven independently on one guiding profile.

Fitting position: As required. Max. length 6.000 mm without joints.
Carriage mounting: By T-slots.
Unit mounting: By T-slots and mounting sets. The linear axis can be combined with any T-slot profile.
Carriage support: In the standard version, the carriage runs on 10 or 12 rollers which can be adjusted and serviced at a central servicing position. For longer carriages the number of rollers can be increased.
Repeatability ± 0,05 mm. Repeated accuracy max. ± 0,05 bis 4.000 mm, ± 0,1 >4.000 mm.

Magnetic Sensor LE100/1 and Magnetic Band MB100

Specifications:

+ Supply voltage	10,5 - 30 VDC; 5 VDC +/- 5% optional 5 V DC +/- 5%
+ Power consumption	<25 mA @ 24VDC; <50mA @ 5VDC
+ Protection	reverse battery protection
+ Connection	flying leads
+ Material of casing	metal
+ Output signals	sinusA, B, phase-shifted by 90°
+ Output current	I out max. 5 mA per signal path
+ Signal size	approx. 1 Vss
+ Travel speed	max. 10 m/s
+ System accuracy	depending on interpolation electronics
+ Gap strip/sensor	0,1 - 0,4 mm (without cover strip)
+ Working temperature	-10....+70 °C
+ Storage temperature	-30....+80°C
+ Interference protection class	3, accord. to ICE 801
+ Test mark	CE
+ System of protection	IP 67 reading S

Magnetic Sensor LE100/1

Contactlessly measuring scanning unit with integrated analog signal output (sine 1 Vss). Together with the magnetic scale MB100 and a follower interpolation electronics unit, the LE100/1 forms an open linear measuring system.

Features:
+ Easy mounting
+ LED status display
+ Signal period 1000 µm (analog)
+ Scale MB100
+ Reference signal (option)
+ Insensitive to dust, shavings, humidity

Magnetic Band MB100

The magnetic band consists of a magnetic tape magnetized at regular distances and firmly joind with the carrier strip. For mounting a special adhesive tape is pre-mounted

Features:
+ Easy mounting by glueing
+ Insensitive to dust, shavings, humidity...
+ accuracy class 50 µm/1000 mm

Options
+ Stainless stell strip

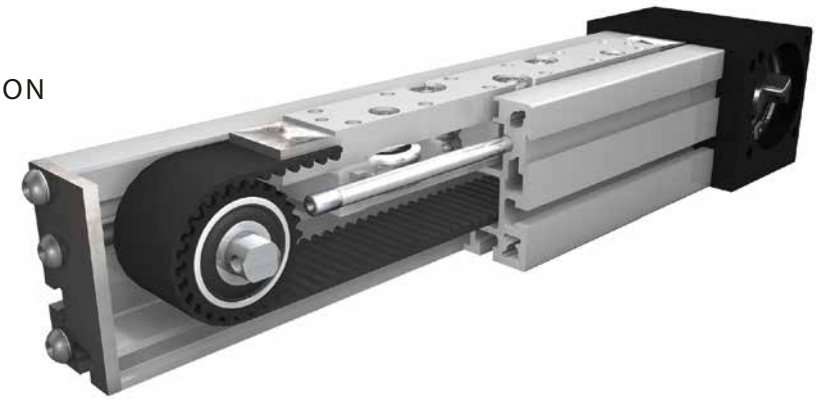
Belt driven positioning systems LL

Linear system **LLZ 40, 60, 80**

BELT DRIVE

- INDEPENDENT INSTALLATION POSITION
- LONG TRAVERSE PATH >6000 MM
- INTERNAL GUIDE
- SIMPLE & SOLID



Function:
The guide body consists of an aluminium square profile, with an integrated roller guide. The carriage is moved by means of an internal rotating toothed belt. On one end there is a pulley block with coupling claws on both sides (standard version). On the opposite end there is a plate with a retensioning device for the toothed belt.

Fitting position: As required. Max. length 6.000 mm without joints.
Carriage mounting: By tapped holes.
Unit mounting: By T-slots and mounting sets. The linear axis can be combined with any T-slot profile.
Belt performance: HTD with steel reinforcement, no backlash when changing direction, repeatability ± 0,1 mm.
Carriage support: The carriage runs on 5 rollers which can be adjusted and serviced at each central servicing position. Two grease nipples at the carriage enable relubrication of the positioning system.

Forces and torques

BELT DRIVE

- LOW OPERATING VOLUME
- INDEPENDENT INSTALLATION POSITION
- NUBBED BELT
- LOW-VIBRATION RUN

Function:
The guide body consists of an aluminium square profile, with an integrated roller guide. The carriage is moved by a revolving interior nobbed belt. The advantage of this system: The belt is guided within the profile, so that the system is independent of the mounting position. The nobbed belt is self-tracking and has a very low operating noise level thanks to its nobs being offset by 45°. Furthermore, it is almost vibration-free in the transition sections. At the front face there is a timing belt deflection unit containing a toothed pulley with two coupling claws in the standard version. On the opposite side there is a bearing piece plate containing a tensioning device for the timing belt.

Mounting position: Variable, max. one-piece-length: 6.000 mm.
Carriage connection: By threaded holes.
Fixation: By T-slots and mounting sets. The linear axis can be combined with any T-slot profile.
Timing belt: N10 with reinforcing steel mesh, no backlash when changing direction, repeatability ± 0.1 mm.
Carriage support: The carriage runs on 5 rollers which can be adjusted and serviced at each central servicing position. Two grease nipples at the carriage enable relubrication of the positioning system.

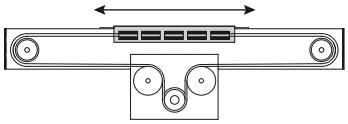
BELT DRIVE

INDEPENDENT INSTALLATION POSITION
OMEGA SYSTEM
VARIABLE DRIVE BLOCK



Function:
The guide body consists of an aluminium square profile, with an integrated roller guide. The carriage is moved by means of an rotating toothed belt. The toothed belt is diverted within a drive block positioned centrically. The result is an enormous compactness with regard to the overall system length. There is a plate on both sides with a tensioning device for the toothed belt.

Fitting position: As required. Max. length 6.000 mm without joints.
Carriage mounting: By tapped holes.
Unit mounting: By T-slots and mounting sets. The linear axis can be combined with any T-slot profile.
Belt performance: HTD with steel reinforcement, no backlash when changing direction, repeatability ± 0,1 mm.
Carriage support: The carriage runs on 5 rollers which can be adjusted and serviced at each central servicing position. Two grease nipples at the carriage enable relubrication of the positioning system.

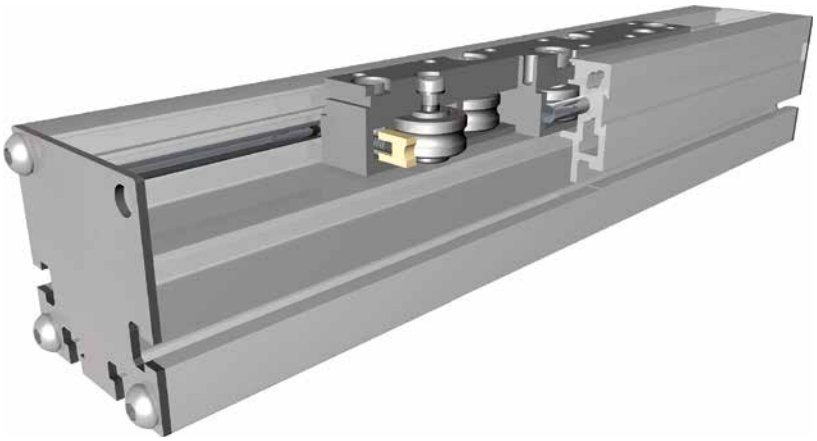
ROLLER GUIDE

- WITHOUT DRIVE
- SUPPORT UNIT
- WITHOUT COVERBAND



Function:
The guide body consists of an aluminium square profile, with an integrated roller guide. This roller guide can be driven by a pneumatic cylinder or other additional drives or it serves as a load carrying slide unit. Construction compatible with LLZ/LLN.

Fitting position: As required. Max. length 6.000 mm without joints.
Carriage mounting: By tapped holes.
Unit mounting: By T-slots and mounting sets. The linear axis can be combined with any T-slot profile.
Carriage support: The carriage runs on 5 rollers which can be adjusted and serviced at each central servicing position. Two grease nipples at the carriage enable relubrication of the positioning system.

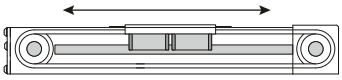
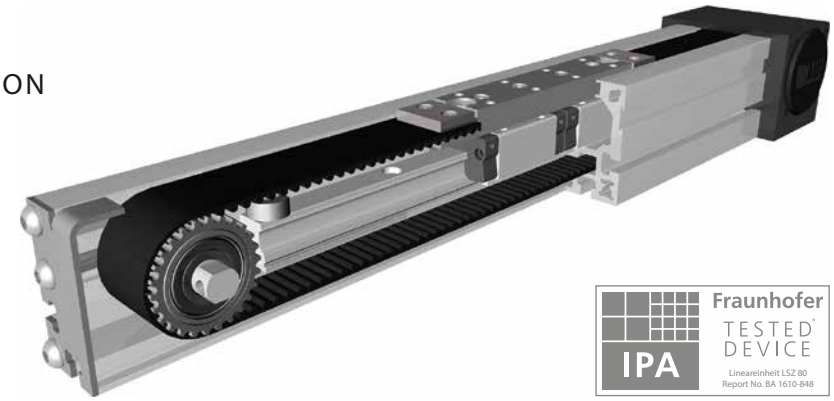
BELT DRIVE

- INDEPENDENT INSTALLATION POSITION
- LONG TRAVERSE PATH >6000 MM
- HIGH TORQUE ABSORPTION





Fraunhofer IPA TESTED DEVICE Lineareinheit LSZ 80 Report No. BA 1610-848

Function:
The guide body consists of an aluminium square profile with an integrated rail guide. The carriage is moved by means of a revolving interior timing belt. At the front face there is a timing belt deflection unit with integrated coupling claws integrated on two sides. The opposite front face is provided with a plate containing a tensioning device for the timing belt. With this series, multi-part assembled units with long strokes can be realized.

Mounting position: Variable, max. one-piece-length: 6.000 mm.
Carriage connection: By threaded holes.
Fixation: By T-slots and mounting sets. The linear axis can be combined with any T-slot profile.
Timing belt: HTD with reinforcing steel mesh, no backlash when changing direction, repeatability ± 0.1 mm.
Carriage support: In the standard version the carriage is positioned on two runner blocks which can be readjusted and maintained at each central servicing position. Two grease nipples at the carriage enable relubrication of the positioning system.

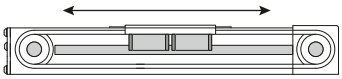
NUBBED BELT DRIVE

- LOW OPERATING VOLUME
- INDEPENDENT INSTALLATION POSITION
- NUBBED BELT
- LOW-VIBRATION RUN
- FOR 3D PRINTING APPLICATIONS



Function:
The guide body consists of an aluminium square profile with an integrated rail guide. The carriage is moved by a revolving interior nobbed belt. The advantage of this system: The belt is guided within the profile, so that the system is independent of the mounting position. The nobbed belt is self-tracking and has a very low operating noise level thanks to its nobs being offset by 45°. Furthermore, it is almost vibration-free in the transition sections. At the front face there is a timing belt deflection unit containing a toothed pulley with two coupling claws in the standard version. On the opposite side there is a bearing piece plate containing a tensioning device for the timing belt.

Mounting position: Variable, max. one-piece-length: 6.000 mm.
Carriage connection: By threaded holes.
Fixation: By T-slots and mounting sets. The linear axis can be combined with any T-slot profile.
Timing belt: N10 with reinforcing steel mesh, no backlash when changing direction, repeatability ± 0.1 mm.
Carriage support: In the standard version the carriage is positioned on two runner blocks which can be readjusted and maintained at each central servicing position. Two grease nipples at the carriage enable relubrication of the positioning system.

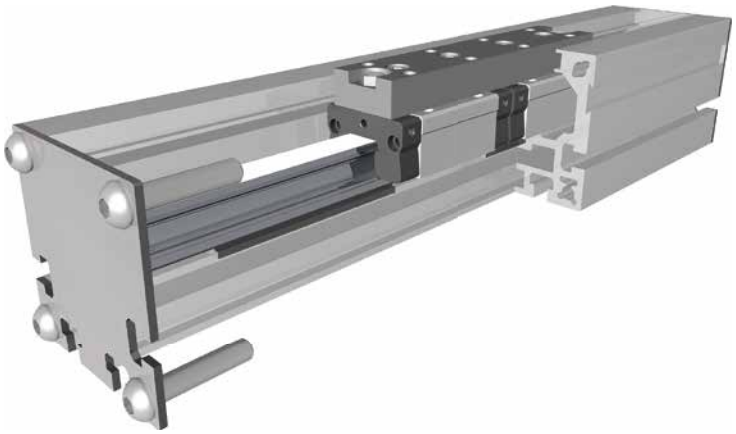
RAIL GUIDE

- WITHOUT DRIVE
- SUPPORT UNIT
- WITHOUT COVERBAND



Function:
The guide body consists of an aluminium square profile, with an integrated rail guide. This rail guide can be driven by a pneumatic cylinder or other additional drives or it serves as a load carrying slide unit. Construction compatible with LSZ/LSN.

Fitting position: As required. Max. length 6.000 mm without joints.
Carriage mounting: By tapped holes.
Unit mounting: By T-slots and mounting sets. The linear axis can be combined with any T-slot profile.
Carriage support: In the standard version the carriage is positioned on two runner blocks which can be readjusted and maintained at each central servicing position. Two grease nipples at the carriage enable relubrication of the positioning system.

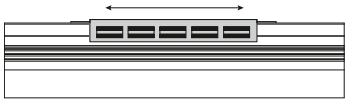
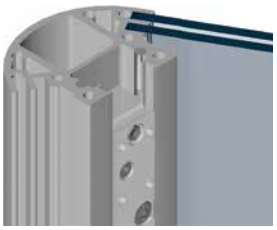
BELT DRIVE

- TRIPOD SYSTEM DESIGN
- ROUNDED PROFILE
- PICK & PLACE
- HIGH SPEED



Function:
The guide body consists of an aluminium profile with elegantly rounded outer edges, with a roller guide integrated into it. The carriage is moved by means of a revolving interior timing belt. At the front face there is a timing belt deflection unit with integrated coupling claws on two sides. The opposite front face is provided with a plate containing a tensioning device for the timing belt. Additional grooves integrated into the profile facilitate the optional fitting of various side frame covers made of glass, plexiglass, aluminium or composite materials. This gantry system, which is made up of 3 linear systems, combines flexibility and speed and provides an essential alternative in plant engineering, for example as a picker or a 3D printer. Thanks to its great flexibility, the system can be used for numerous applications.



Sample view: glazing

Fitting position: As required. Max. length 6.000 mm without joints.
Carriage mounting: By tapped holes.
Belt performance: HTD with steel reinforcement, no backlash when changing direction, repeatability ± 0,1 mm.
Carriage support: The carriage runs on 5 rollers which can be adjusted and serviced at each central servicing position. Two grease nipples at the carriage enable relubrication of the positioning system.

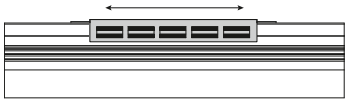
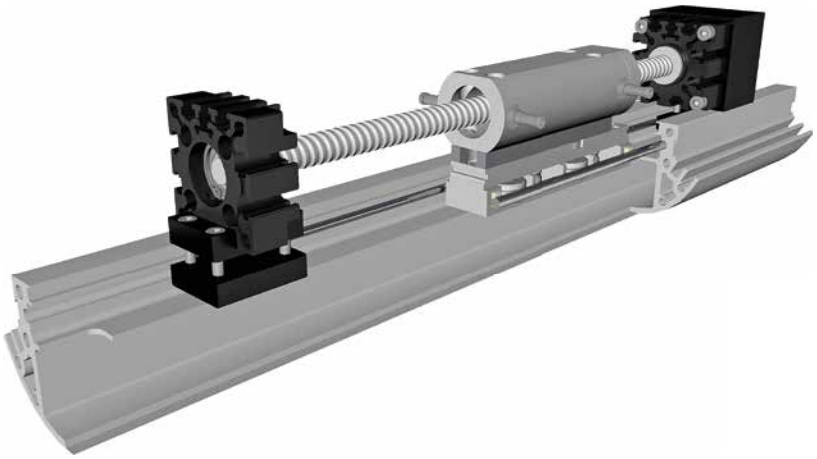
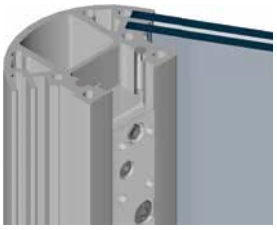
SPINDLE DRIVES

- TRIPOD SYSTEM DESIGN
- ROUNDED PROFILE
- PICK & PLACE
- PRECISION





Function:
The guide body consists of an aluminium profile with elegantly rounded outer edges. The carriage is moved by a rotating threaded spindle provided with a follower nut. The spindle nuts move along the profile axes through a roller guide system to ensure a smooth, synchronous run. Additional grooves integrated into the profile facilitate the optional fitting of various side frame covers made of glass, plexiglass, aluminium or composite materials. This gantry system, which is made up of 3 linear systems, combines flexibility and speed and provides an essential alternative in plant engineering, for example as a picker or a 3D printer. Thanks to its great precision, the system can be used for numerous applications.



Sample view: glazing

Fitting position: As required. Max. profile length 6.000 mm.
Spindle version: Trapezoidal or ball screw spindle, max. length 3000 mm
Carriage support: The carriage runs on 5 rollers which can be adjusted and serviced at each central servicing position. Two grease nipples at the carriage enable relubrication of the positioning system.

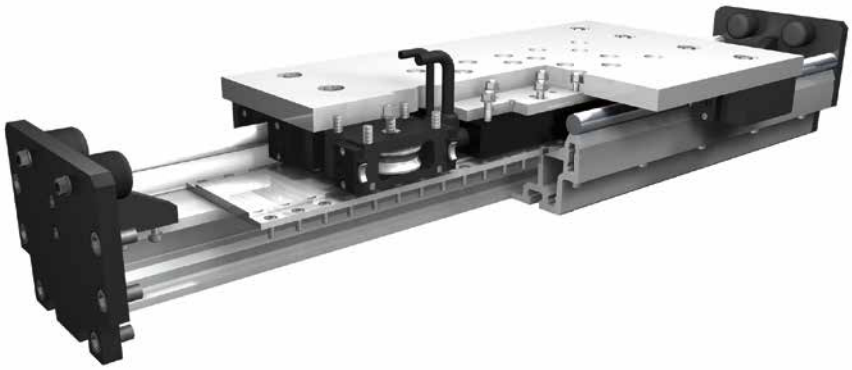
Roller guide

Linear system **ALLM 203, 204**

LINEAR MOTOR DRIVE

- ROLLER GUIDE
- HEAVY LOAD
- HIGH LOAD CAPACITY
- LINEAR MOTOR



Function:
This unit consists of an aluminium profile with hardened steel spindles mounted on top of the profile. The carriage, which has internal linear ball bearings that can be adjusted free of play, moves along the unit. The linear-motor ALLM unit is based on the principle of a linear, synchronous AC motor. The guiding profile is fitted with permanent magnets as stator. The carriage is fitted with the actuator. The magnetic attraction causes a force between carriage and guiding profile also in the absence of current. This force can be used for the initial tension of the bearings. Several carriages can be driven independently on one guiding profile.

Fitting position: As required. Max. length 5.000 mm without joints.
Carriage mounting: By tapped holes.
Unit mounting: By T-slots and mounting sets. The linear axis can be combined with any T-slot profile.
Carriage support: In the standard version, the carriage runs on 8 rollers which can be adjusted and serviced. For longer carriages the number of rollers can be increased. Repeatability ± 0,05 mm.

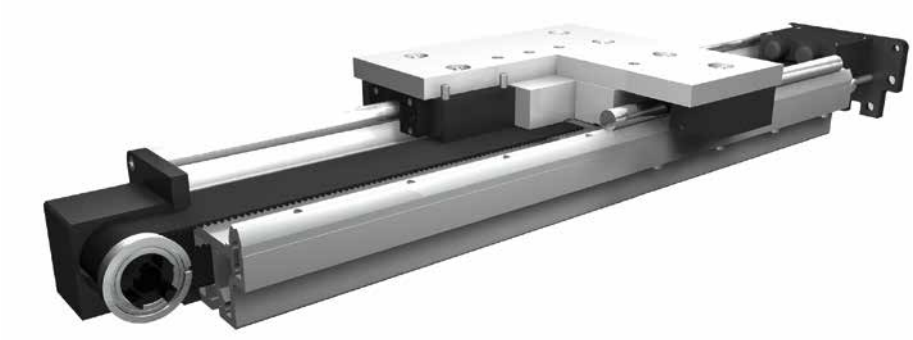
BELT DRIVE

- ROLLER GUIDE
- HEAVY LOAD
- HIGH LOAD CAPACITY



Function:
This unit consists of an aluminium profile with hardened steel guide rods mounted on top of the profile. The carriage, which has internal linear ball bearings that can be adjusted free of play, is driven along the guide rods by a timing belt. The pulleys have maintenance-free ball bearings. Opposite the driven side there is an integrated timing-belt tensioner which can be readjusted by 2 screws.

Fitting position: As required. Max. length 5.000 mm without joints.
Carriage mounting: By tapped holes.
Unit mounting: By T-slots and mounting sets. The linear axis can be combined with any T-slot profile.
Carriage support: In the standard version, the carriage runs on 8 rollers which can be adjusted and serviced at a central servicing position. For longer carriages the number of rollers can be increased. Repeatability ± 0,1.
Belt type: HTD with steel reinforcement, no backlash when changing direction, repeatability: ± 0,1 mm.

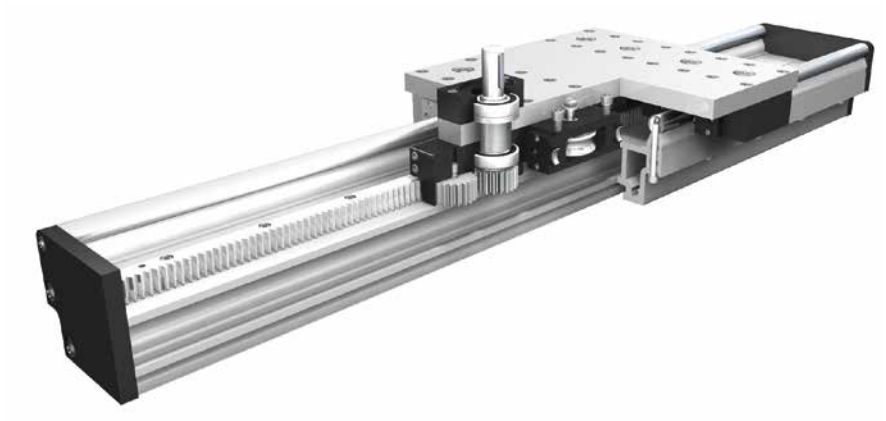
RACK AND PINION DRIVE

- ROLLER GUIDE
- HEAVY LOAD
- LIFTING SYSTEM
- HIGH LOAD CAPACITY



Function:
This unit consists of an aluminium profile with hardened steel guide rods mounted on top of the profile. The carriage, which has internal linear ball bearings that can be adjusted free of play, is driven along the guide rods by a high precision rack. The rack and pinion system is suitable for highly dynamic servo operation and ideal for lifting movements. The pinion has maintenance-free ball bearings. The rack is lubricated by a toothed felt wheel.

Fitting position: As required. Max. length 5.000 mm without joints.
Carriage mounting: By tapped holes.
Unit mounting: By T-slots and mounting sets. The linear axis can be combined with any T-slot profile.
Carriage support: In the standard version, the carriage runs on 8 rollers which can be adjusted and serviced at a central servicing position. For longer carriages the number of rollers can be increased. Repeatability ± 0,1.
Rack: 8e27 hardened and ground. Repeatability: ± 0,1 mm.

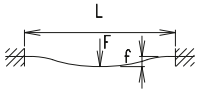
All forces and torques related to the following: existing values / table values $\frac{Fy}{Fy_{dyn}} + \frac{Fz}{Fz_{dyn}} + \frac{Mx}{Mx_{dyn}} + \frac{My}{My_{dyn}} + \frac{Mz}{Mz_{dyn}} \leq 1$				
Geometrical moments of inertia of aluminium profile				
I_x mm^4	2,26 x 10^7		2,98 x 10^7	
I_y mm^4	8,75 x 10^7		10,22 x 10^7	
Elastic modulus N/mm^2	70000		70000	

For life-time calculation of rollers use our homepage.

14.1

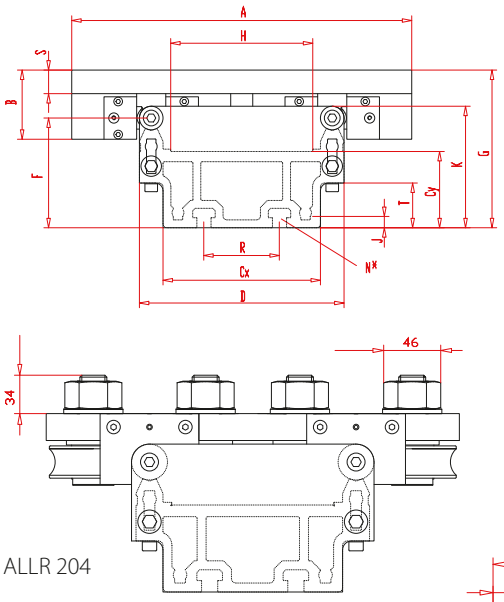
Deflection:

$$f = \frac{F * L^3}{E * I * 192}$$

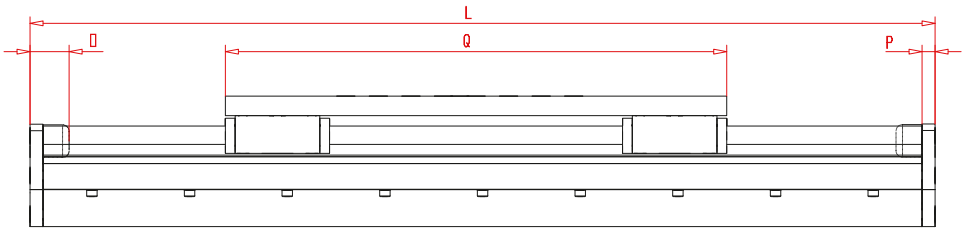


f = deflection (mm)
F = load (N)
L = free length (mm)
E = elastic modulus 70000 (N/mm^2)
I = second moment of area (mm^4)

Linear system **ALLR 203, 204**



ALLR 204



Increasing the carriage length will increase the basic length by the same amount.

Size	Basic length L	A	B	Cx	Cy	D	F	G	H	K	N for	O	P	Q	R	S	T	Basic weight	Weight per 100 mm
ALLR 203	580	432	88	200	97	260	139,6	200,5	180,5	154,5	M16	60	20	460	96	30	57	64 kg	3,9 kg

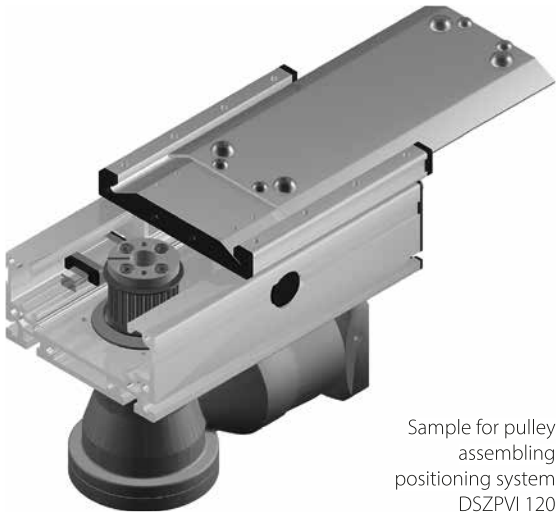
D 120	M5	4	10	148	19 000
D 160	M6	4	17	244	22 000
D 200	M6	8	17	689	43 000

Function:

Pulley with integrated tension set for positioning systems DLZPVI (E) and DSZPVI (E). In order to realize a simple and fast assembling we reduced the number of parts. Each tension set has got two dismounting threads in order to disassemble the pulley easily.



Sample for pulley assembling positioning system DSZPVI 120

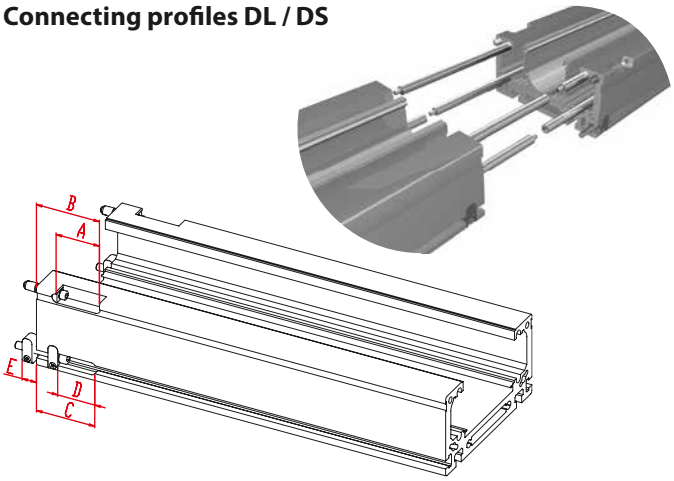
Connecting profiles DL / DS



The millings for the extensions are directly incorporated into the profile, so that there is only one transition point in the profile. The guide shafts or rail guides are jointed at a different position. To ensure that even the smallest tolerance deviations are avoided, only pieces of the same lots are joined to each other.

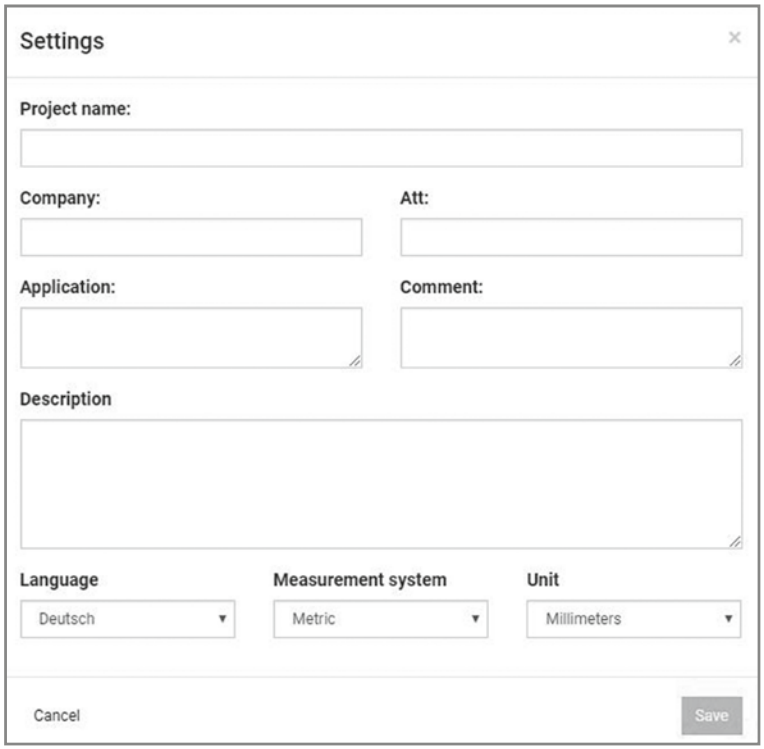
Specifications

Calculation of toothed belt

Calculation of the max. acceleration

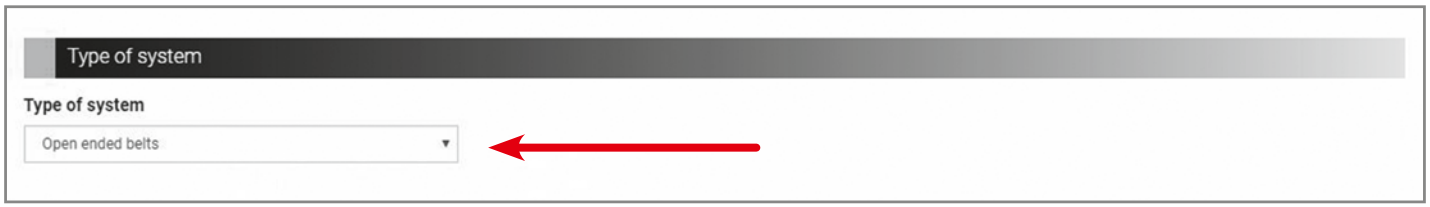


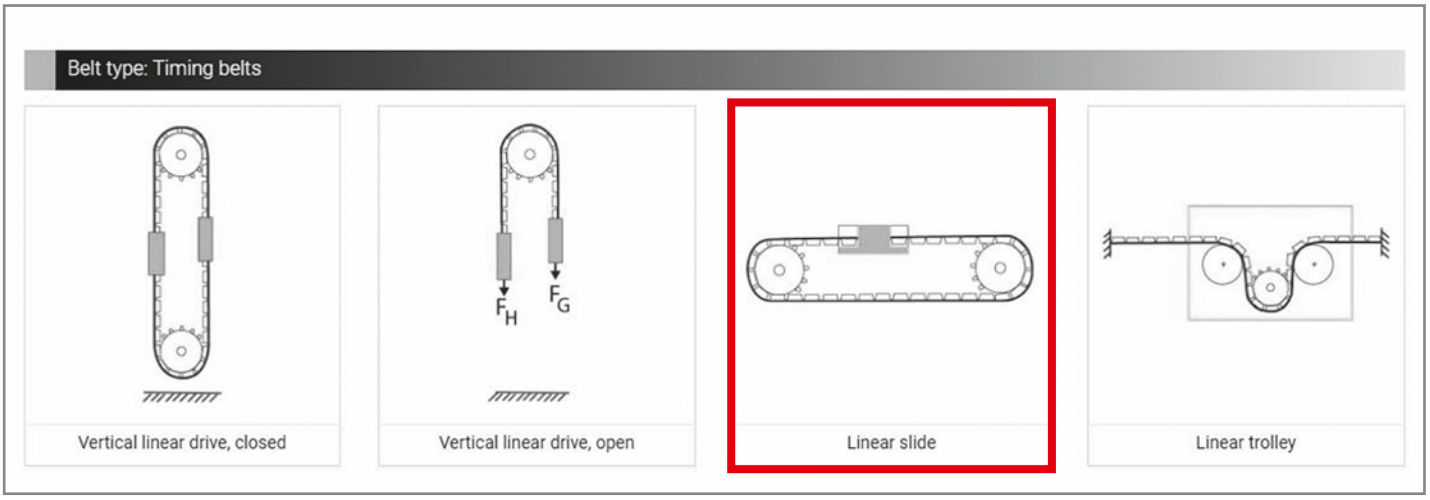
To calculate your load data, please use the timing belt calculation of Continental:

www.conti-professional.com

Act as follows:

- Register an account
- Create a new project
- Select **"Open ended belts"** in the project editor
- Select drive type **"Linear slide"**
- Enter tooth belt type and parameters
- Calculate





Calculation of toothed belt

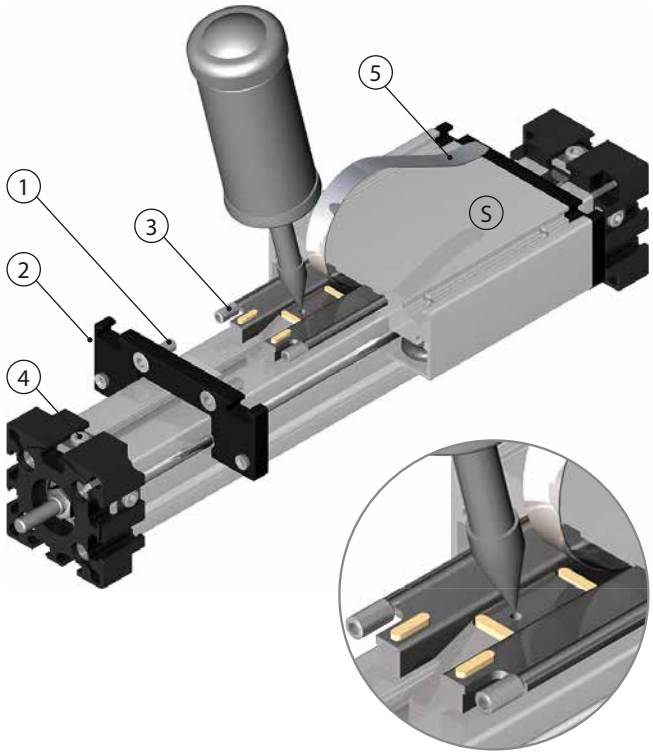
Service manuals

EG / EL - units

5.2

Spindle lubrication EG 30 / EL 30



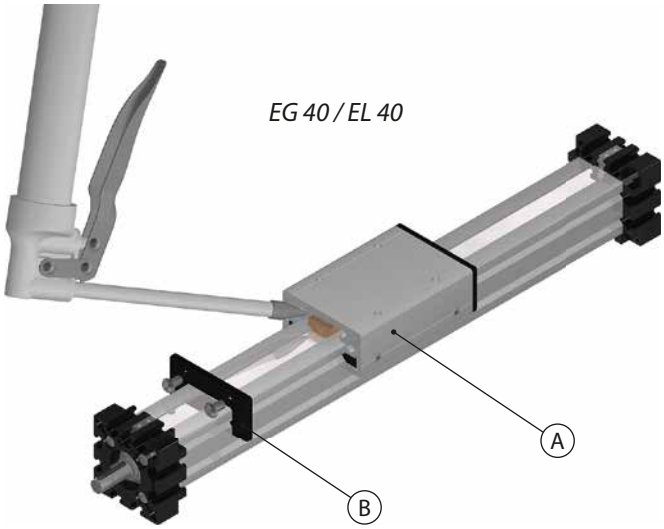
- Unscrew the cylindric screws **(1)** and push the wiper end plate **(2)** to the side.
- Unbend screws **(3)**, push slide **(S)** to other side
- Unscrew the grub screw **(4)** and lift the coverband **(5)**.
- Grease can be filled now with grease gun.

  For mass of greasing look at table below.

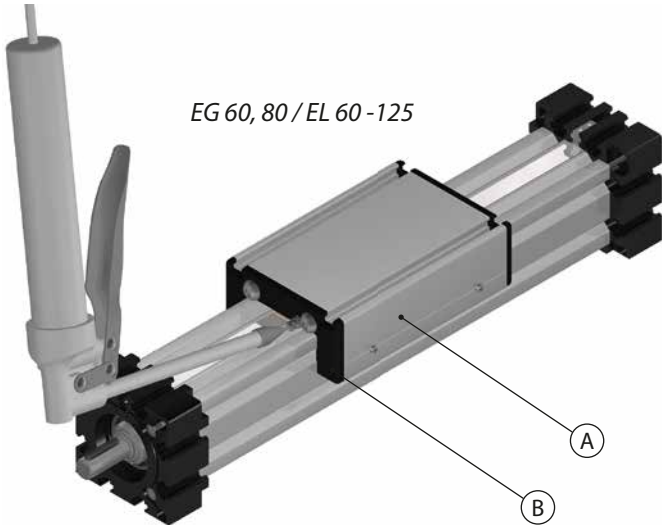
Type	Pitch	Regreasing
30	Kg 08 x 2,5	0,1 g

Spindle lubrication EG 40, 60, 80 / EL 60, 80, 100, 125

EG 40 / EL 40



EG 60, 80 / EL 60 -125



Type	Pitch	Regreasing	Type	Pitch	Regreasing
30	Kg 08 x 2,5	0,1 g	**60**	Kg 20 x 05	3,00 g
40	Kg 16 x 05	1,33 g	**80**	Kg 25 x 25	3,00 g

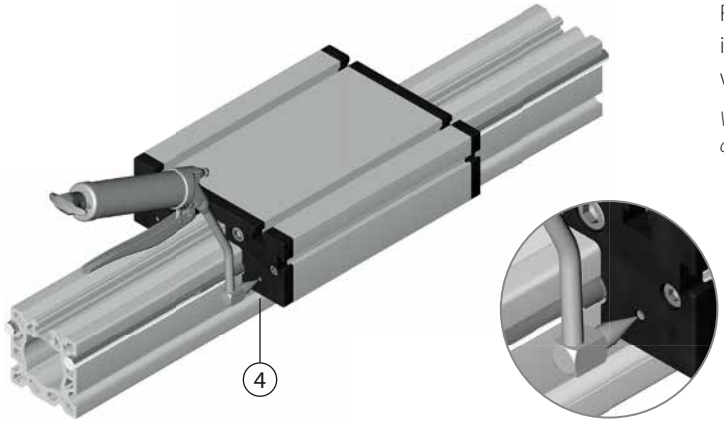
Ⓐ carriage Ⓑ wiper end plate

EG / EL 40
with greasing nipple behind the wiper end plate

EG 60, 80 / EL 60 - 125
with external greasing nipple

For mass of greasing look at table below.
Spindle greasing every 500-1000 working hours.

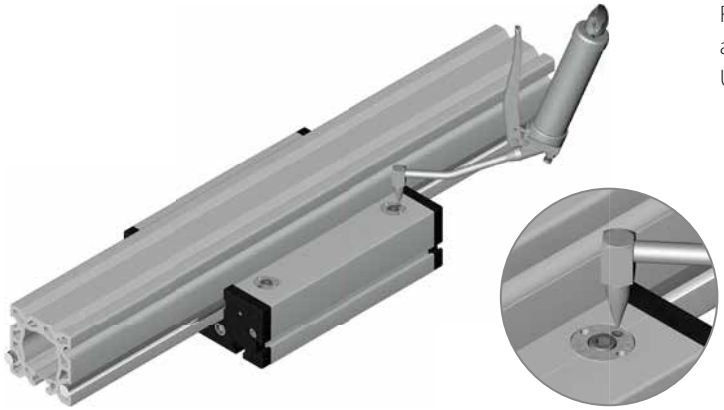
Guiding rods lubrication EL | ML



Rods will be greased by the strippers of carriage. There are 2 oil nipples in each wiper end plate **(4)**, where the tanks for the strippers can be filled with an oil gun.

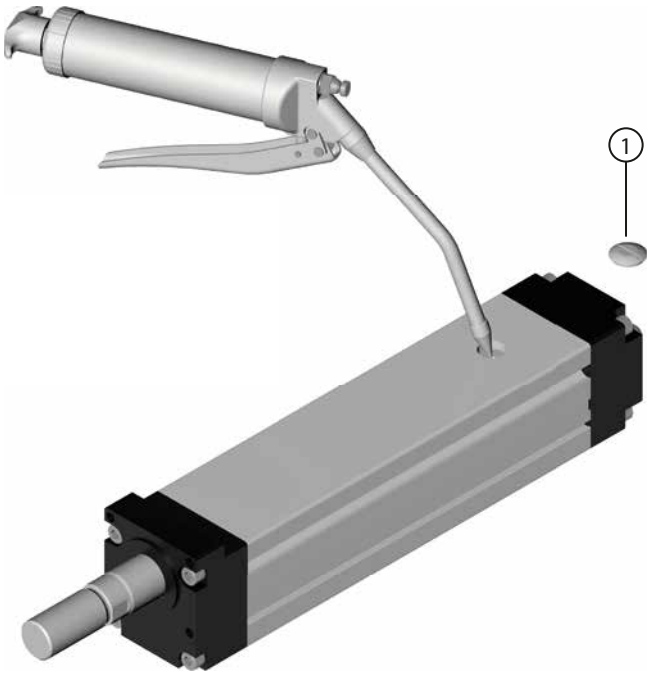
Viscosity of oil: 200 mm²/s, T= 40° C. Interval of greasing depends on environmental conditions, min. once a month. Minimum stroke must be same than length of slide.

Rollers size lubrication EL 100, 125 | ML 100



Rollers should be greased each 1.000 working hours or each 6 months with a grease gun. For greaser nipple look at the eccentric at carriage bottom. Use roller grease.

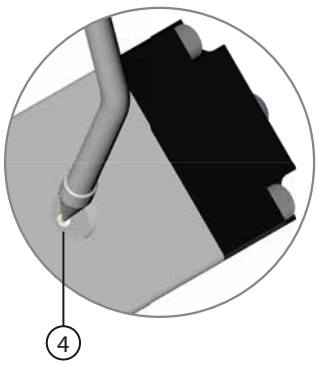
Lubrication EHTX / EHKX 60, 80



(1) = cover cap (4) = greasing nipple

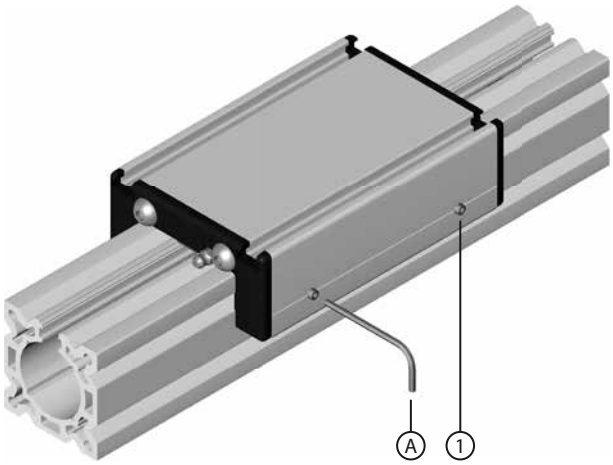
- Dismount cover cap **(1)**.
- Drive the carriage to the service position until you can see the greasing nipple **(4)** in the lubrication hole.
- Re-greasing with grease gun.

For mass of greasing look at table below.
Spindle greasing every 500-1000 working hours.



Type	Pitch	Regreasing
60	Tr 18 x 4	1,33 g
60	Tr 18 x 8	0,84 g
80	Tr 24 x 5	2,00 g
80	Tr 24 x 10	3,00 g
80	Kg 25 x 5	2,00 g
80	Kg 25 x 10	3,00 g

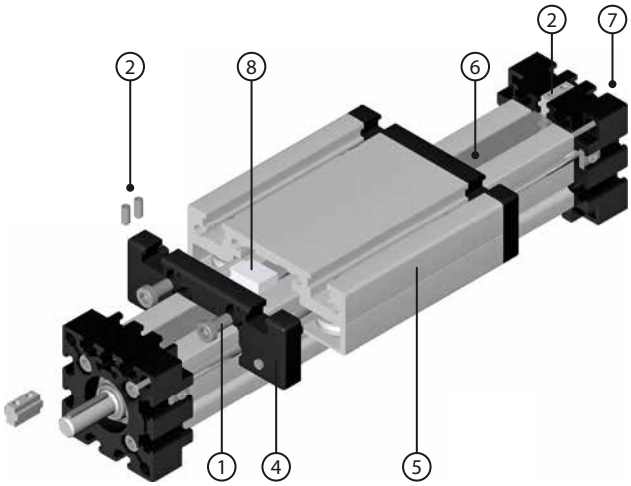
Adjusting the carriage EG 30, 40, 60, 80



- Fix all 4 grub screws **(1)** with a hexagon socket wrench **(A)** at a centered position of the carriage.
- Loose all grub screws **(1)** about ⅛ rotation and hit the carriage carefully free by a soft-head hammer.
- Pay attention to a centered position of the carriage. (Check by a caliper.)

The grub screws **(1)** shoud be locked by bonding.

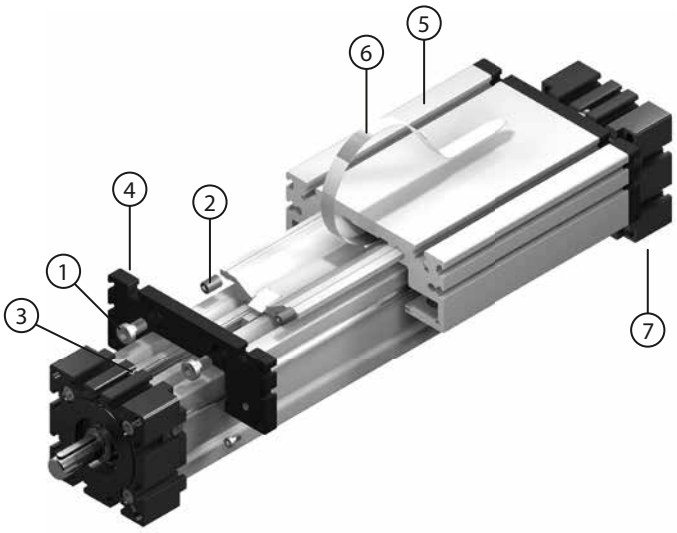
Changing cover band EL | EG 30, 40



- Unscrew cylindric screws **(1)** on both sides of carriage **(5)**.
- Push wiper endplate **(4)** to the side.
- Unscrew the screws **(2)** on both bearing parts and remove the cover band clamp **(3)**.
- Pull out the coverband **(6)**.

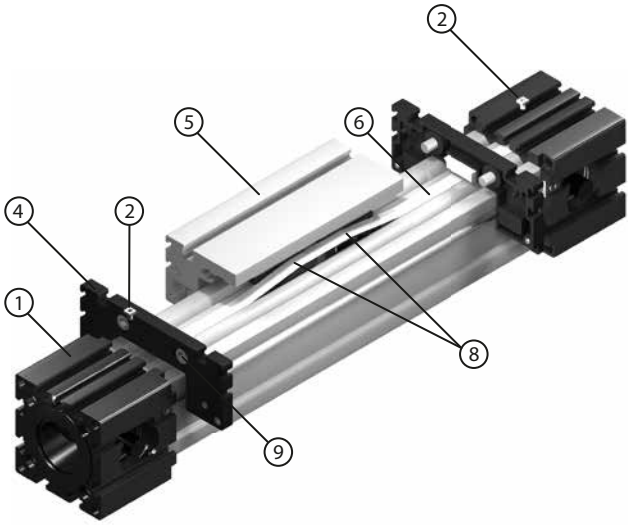
- Mount the new cover band and the cover band clamp **(3)**. Then fix the screws **(2)** on one side of bearing block **(7)**, tense the band with a pointed pliers and fix with the screws **(2)**.
- Mount the wiper end plates **(4)** with the cylindric screws **(1)** on both sides of carriage **(5)**. Pay attention to the seat of the slides **(8)**.

Changing cover band EL 100, 125



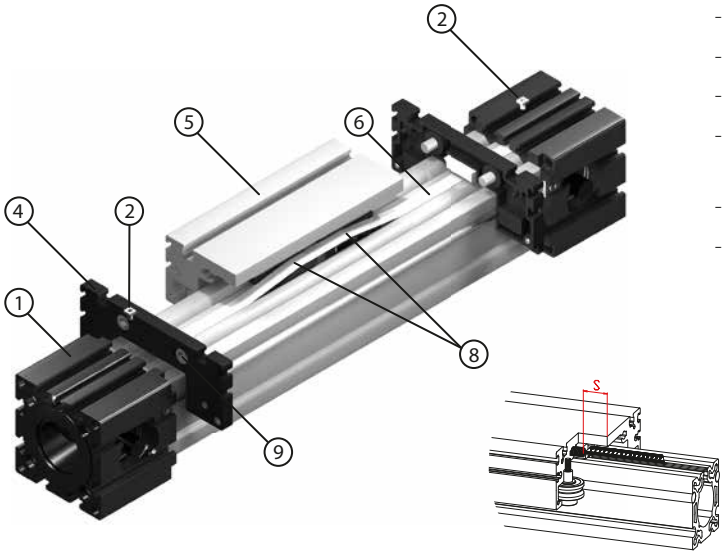
- Unscrew cylindric screws **(1)**, push plastic wiper endplate **(4)** to one bearing-block **(7)**.
- Unbend grub screws **(2)**, push carriage **(5)** to other side.
- Unscrew screws **(3)** and pull out the coverband **(6)**.
- Mount the new coverband, fix the screws **(3)** at one side, tense the band with a pointed pliers and fix the screws **(3)**.
- Fix the carriage **(5)** by the grub screws **(2)**and mount the wiper end plate **(4)**.

Changing cover band ELHZ / ELVZ 60, 80



- Unscrew cylindric screws **(9)** on both sides of carriage **(5)**.
- Push the wiper end plates **(4)** to the side.
- Unscrew the grub screwes **(2)** and pull out the old coverband **(6)**.
- Push the new coverband under both sliding block **(8)** in the carriage **(5)** and wiper end plates **(4)** into the bearing block **(1)**.
- Fix the grub screw **(3)** on one side.
- Tense the coverband with a pointed pliers and fix the screws **(3)** on the opposite side.

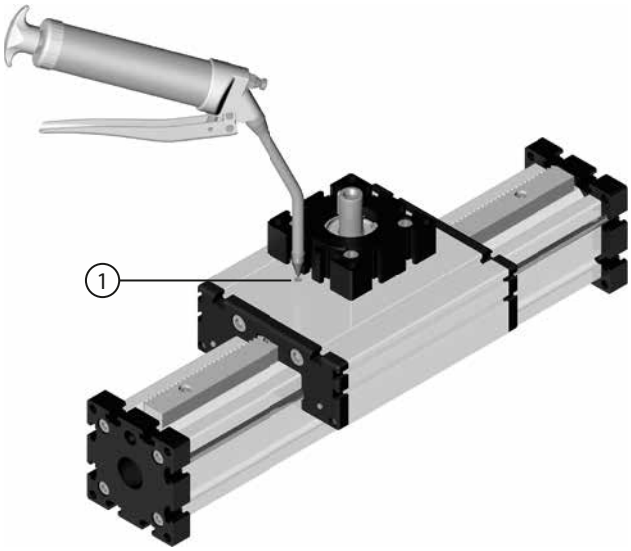
Changing cover band ELHZ / ELVZ 100, 125



- Unscrew cylindric screws **(9)** on both sides of carriage **(5)**.
- Push the wiper end plates **(4)** to the side.
- Unscrew the grub screwes **(2)** and pull out the old coverband **(6)**.
- Push the new coverband under both sliding block **(8)** in the carriage **(5)** and wiper end plates **(4)** into the bearing block **(1)**.
- Fix the grub screw **(3)** on one side.
- Tense the coverband with a pointed pliers and fix the screws **(3)** on the opposite side.

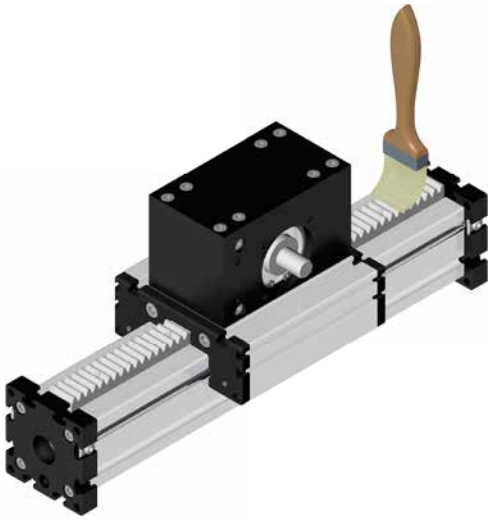
Important:
Measure the distance "s" between the corner of carriage and the head of the grub screw for belt-tension!

Lubrication rack ELZQ



- The rack can be relubricated through a lubricating nipple **(1)** in the carriage.
- Regrease with an oil gun.

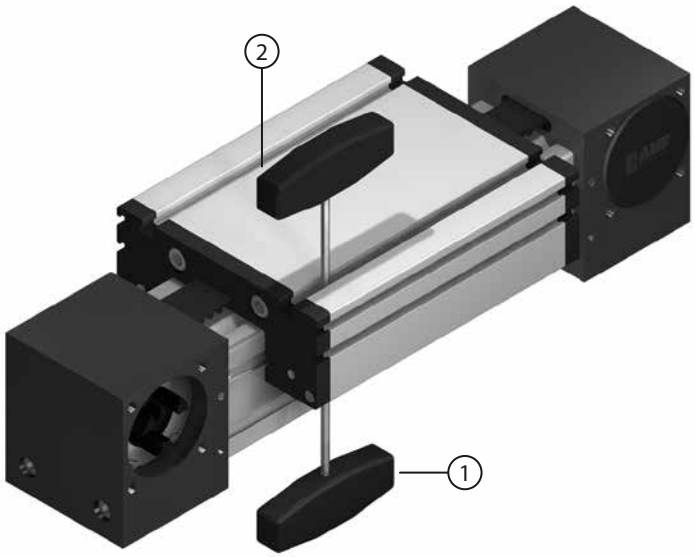
Lubrication rack ELZA / ELDZA

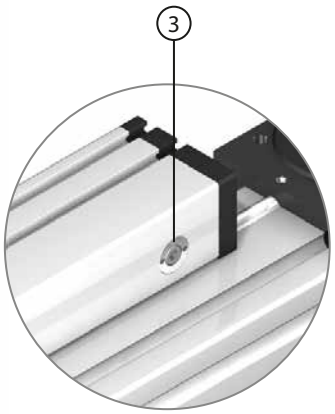


Lubrication is only necessary for steel- or stainless-steel racks and steel- or stainless-steel gears. All other material combinations are maintenance-free.

- Push the carriage close to one bearing-block.
- Grease the rack with a brush.
  Use SKF grease LGMT for this.
- After lubrication, move a few times over the entire stroke so that the lubricant can be distributed well over the entire rack.

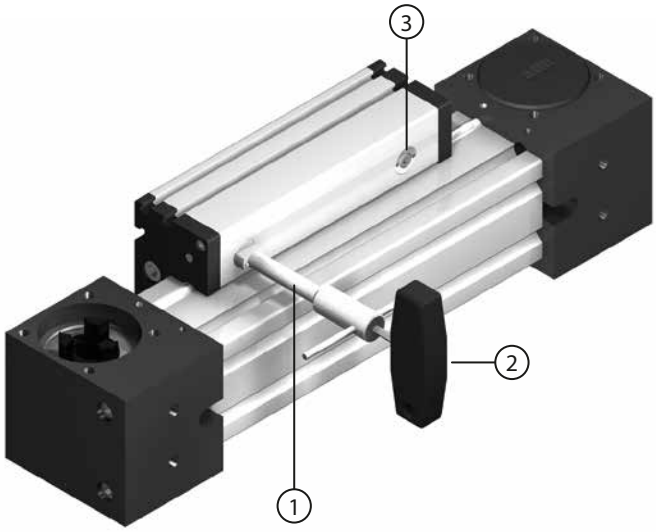
Adjusting the rollers, sizes EL 40, 60



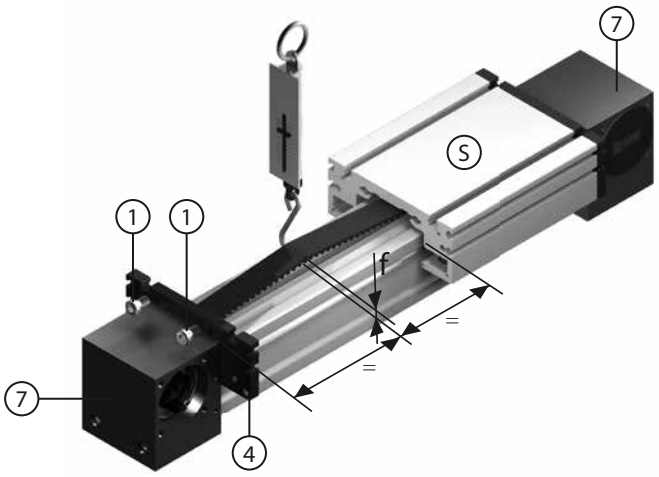


- Fasten eccentric bolt with screw key **(1)**.
- Unscrew screw with hexagon socket screw key **(2)** as far as eccentric bolt can be turned, upper surface is stamped, broken line of stamp **(3)** must coincide with drawing groove of slide.
- Adjust at other side without initial tension.
- Stamps must be in same position and eccentric bolt must be adjusted into right direction.

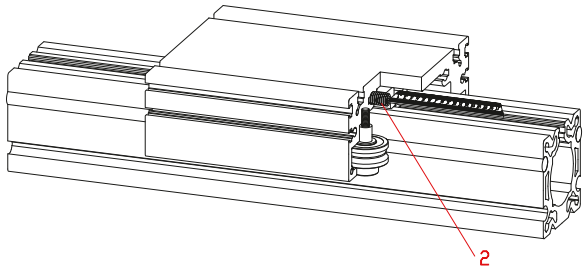
Adjusting the rollers, sizes EL 30, 80, 100, 125



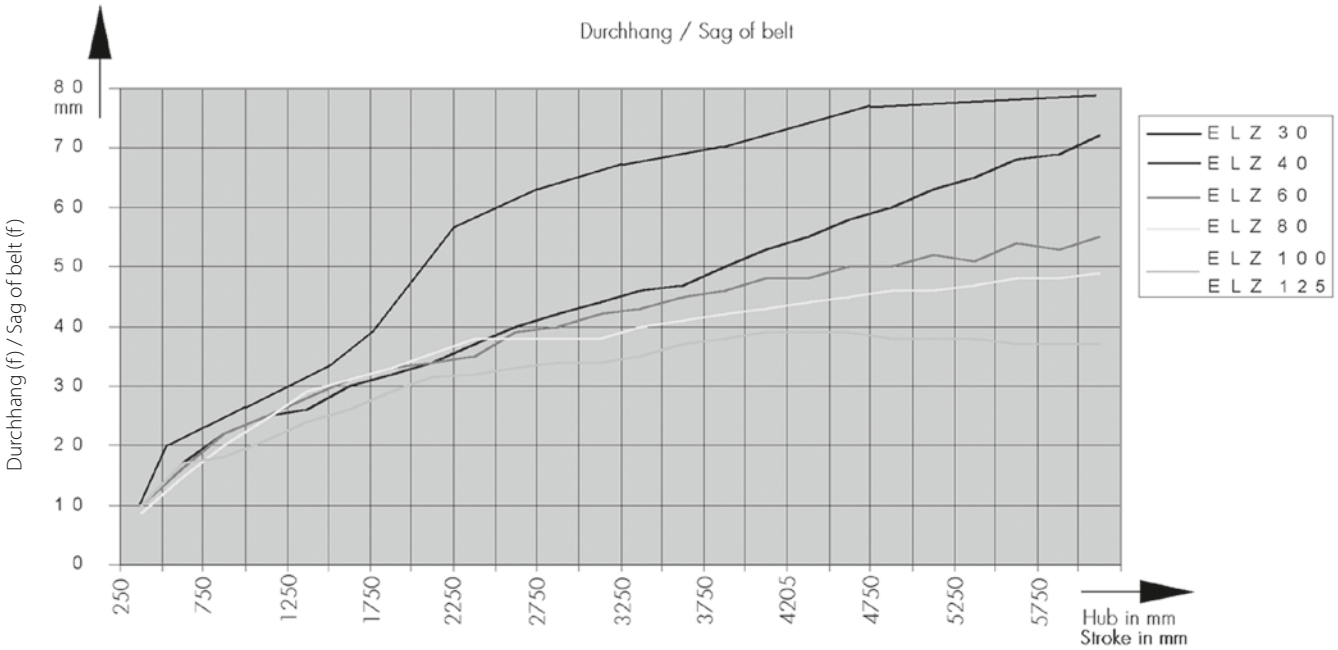
Belt tension ELZ



- Push the carriage **(S)** close to one bearing-block **(7)**.
- Unscrew grub screws **(2)** of the wiper endplate **(4)** and push it to the other bearing-block **(7)**.
- Pull the spring balance with force of table and measure the sag (f) of the belt. Compare the measured value with the table.
- Tense or release the belt by the grub screws **(2)**.
- Both grub screws **(2)** must have the same distance between the corner of the carriage **(5)** and the head of the grub screw **(2)**.
- The grub screws **(2)** have to be secured by bonding.
- Measure the distance (s) with a metal rule.
- Mount the wiper endplate **(4)**.

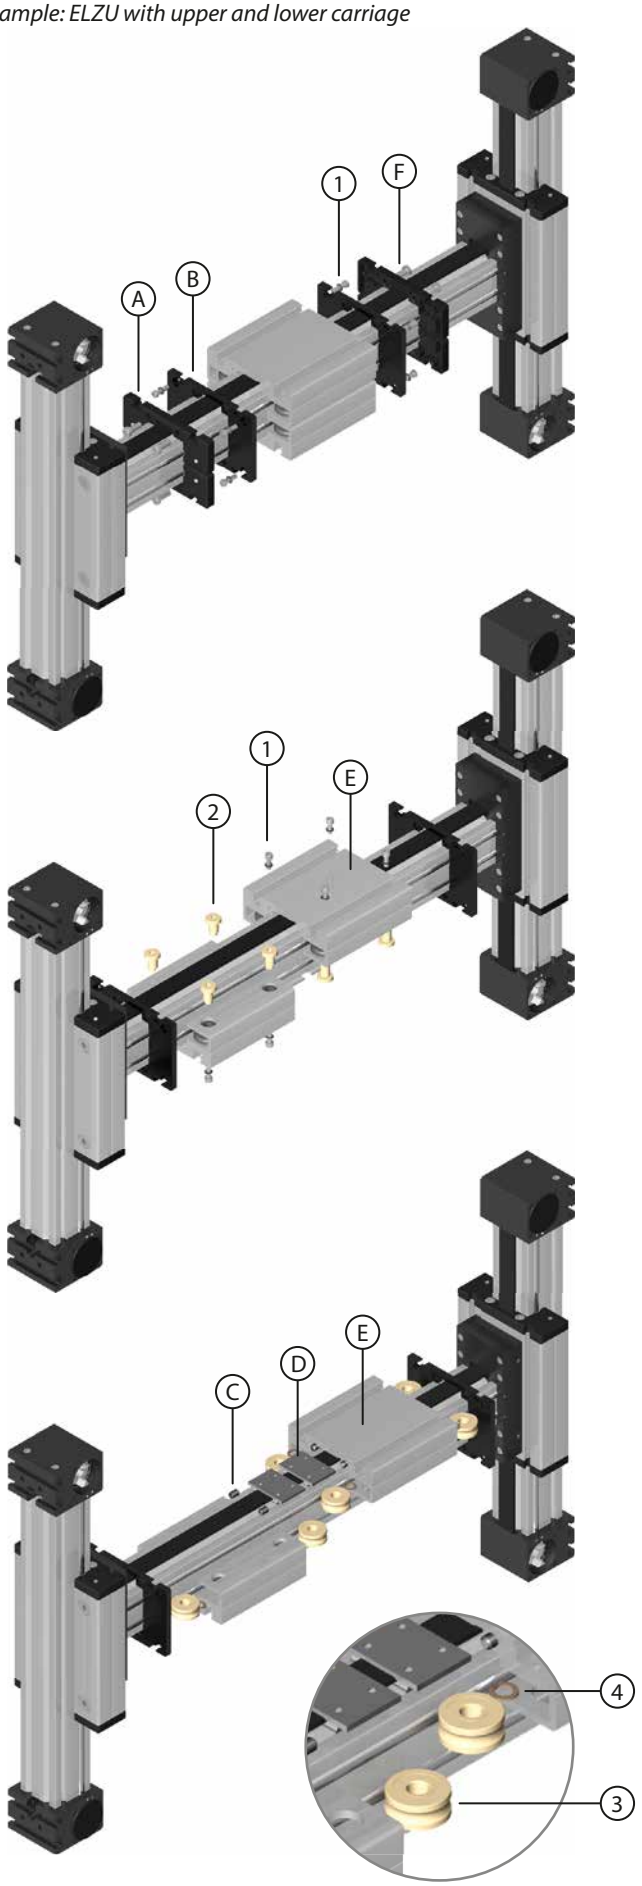


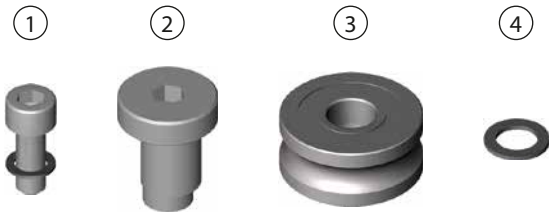
Size	Force
30	20 N
40	20 N
60	30 N
80	50 N
100	50 N
125	50 N



Exchange of rollers ELZ

Example: ELZU with upper and lower carriage



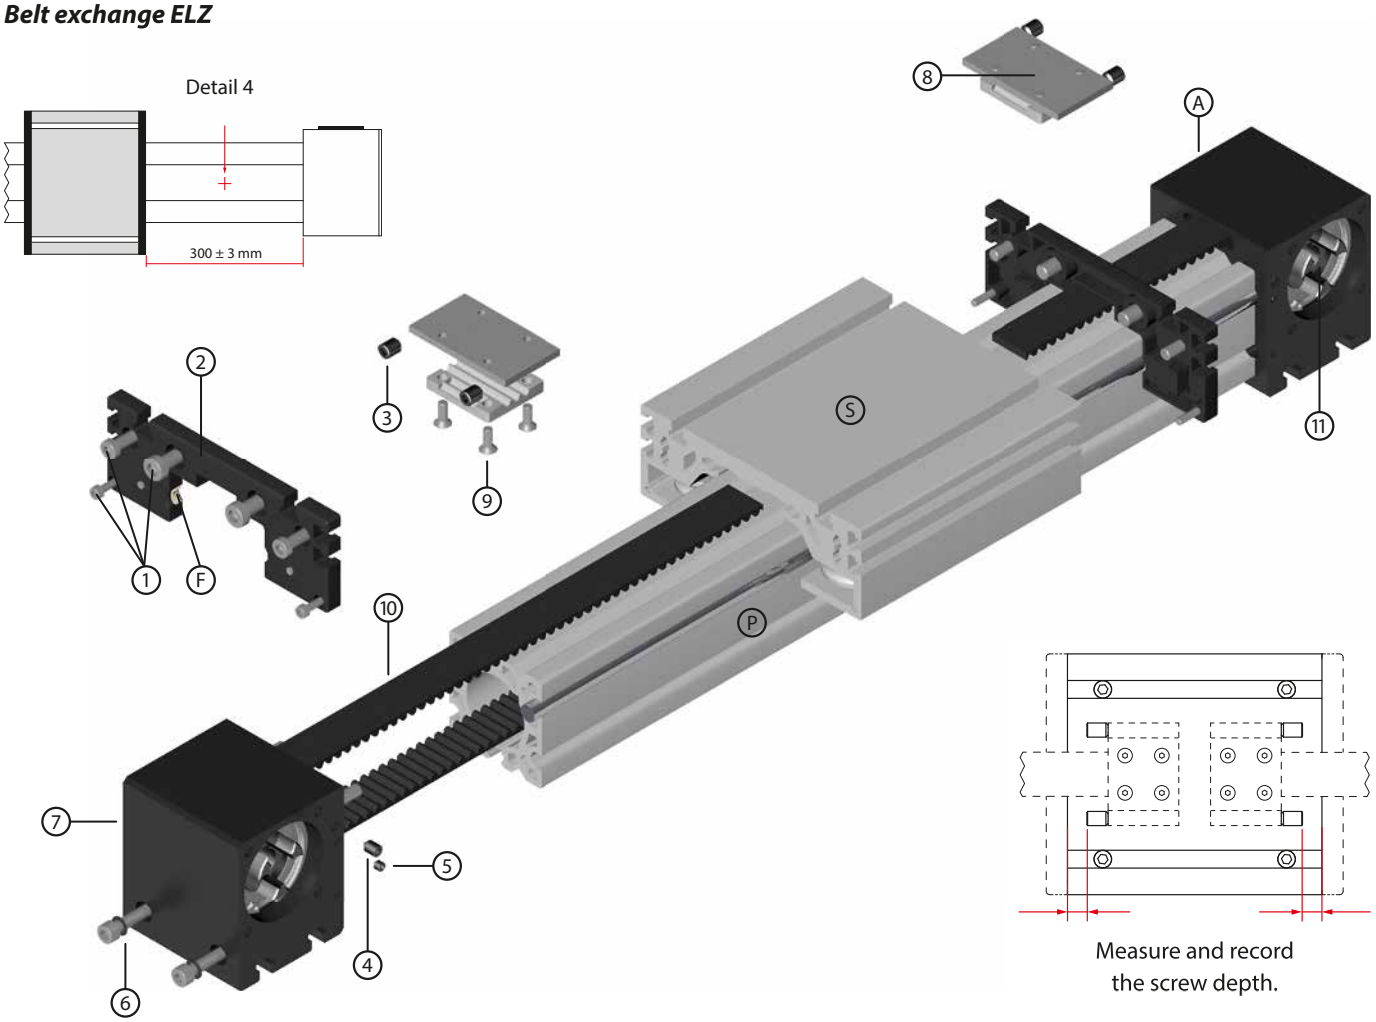


1. Clamping screw with schnorr washer
2. Eccentric bolt
3. Roller
4. Adjusting washer

- Unscrew clamping screws **(F)** and dismount the wiper end plates **(A)** and put them aside.
- Unscrew clamping screws **(1)** and push the connecting flange **(B)** to the side.
- Loosen the grub screws **(C)** from the belt tensioner **(D)**. Now the carriage can be freely moved.
- Unscrew the clamping screws **(1)** in the carriage **(E)** and remove eccentric bolt **(2)**.
- Remove rollers **(3)** and adjusting washers **(4)**.
- Insert new rollers: Put the adjusting washer **(4)** into the existing milled opening. Place the roller **(3)** onto the adjusting washer **(4)** so that it accurately fits. Re-insert eccentric bolt **(2)**. Tighten the clamping screws **(1)** carefully so that the eccentric bolt **(2)** is still freely movable.

- **Adjust the rollers!**
- After the rollers have been successfully adjusted, fix the clamping screws **(1)**.

Belt exchange ELZ



Measure and record
the screw depth.

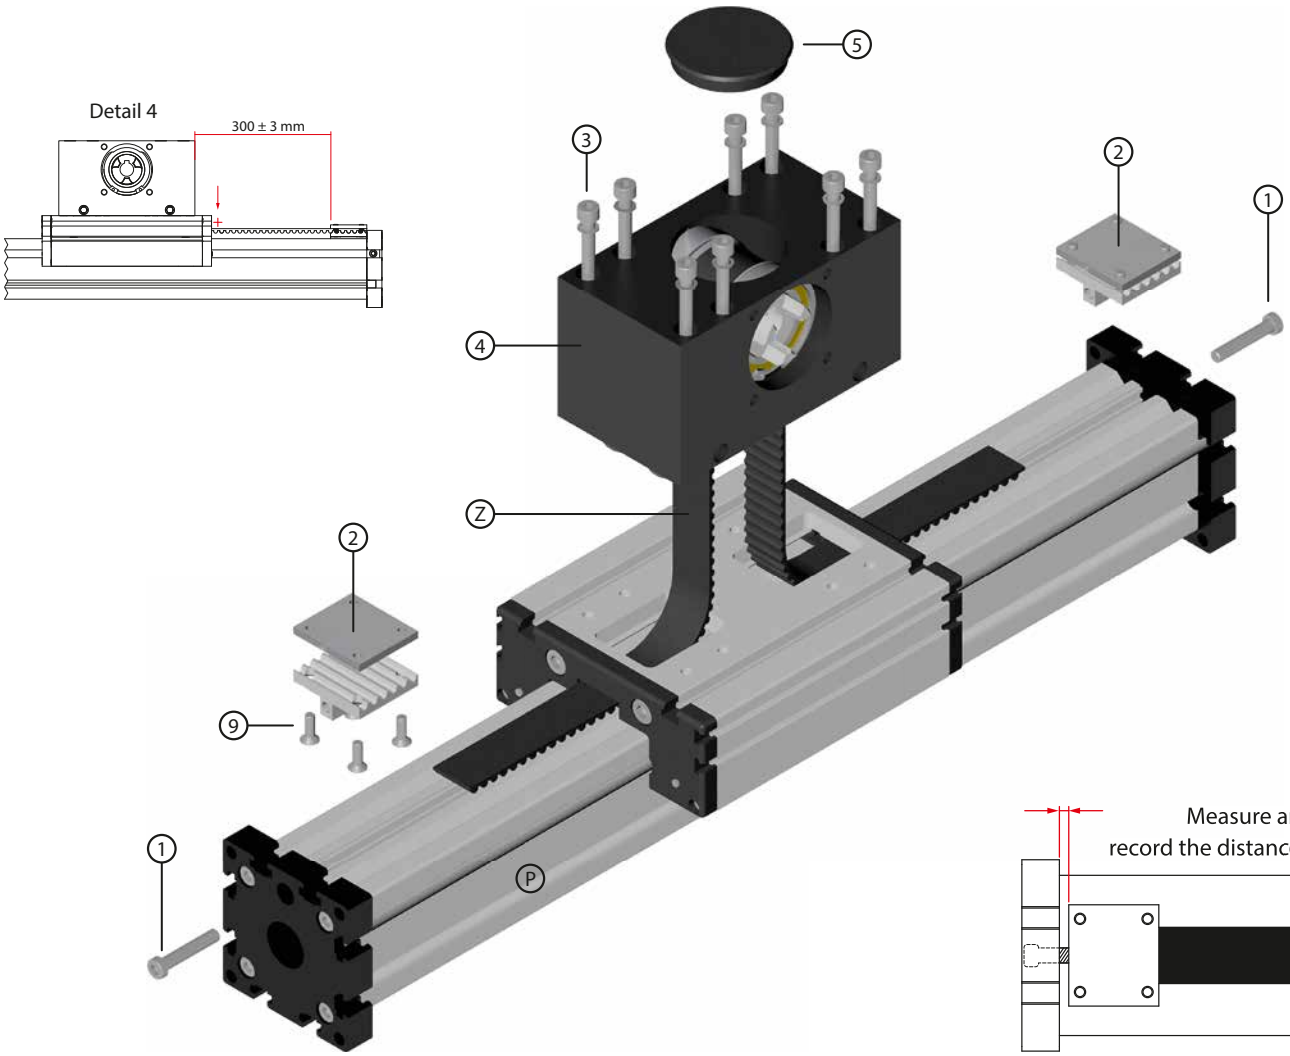
- Unscrew cylindric screws **(1)** and dismount wiper end plates **(2)** on both sides of the carriage.
  Take care, that the felt wipers (F) don`t drop out.
- The belt adjusters are fixed by grub screws **(3)** in the carriage **(S)**; to reach the right belt tension measure the distance between the edge of the carriage and the head of the grub screws. ***Notice: the distance must be the same on both sides in axial direction.***
- Unscrew the grub screws **(3)** and dismount the belt adjusters **(8).**
- Unscrew the grub screws **(4 + 5)** and the cylindric screws **(6)** and separate the bearing-block **(7)** from the unit.
- Pull out the toothed belt **(10).** In most cases it is not necessary to separate both bearing blocks for inserting the new belt.

The reconstruction of the unit takes place in opposite order.

- Shorten the new belt to the length of the old one.
- Insert the toothed belt with the toothed side to the profile **(P)** into the not dismounted pulley block **(A)**. Rotate the toothed pulley **(11)** until the toothed belt **(10)** appears at the end of the profile **(P)** and pull the belt through the dismounted pulley block **(7)**.
- Mount the pulley block **(7)** on the profile **(P)** and tighten the grub screws (4 + 5) and the cylindric screws **(6)**.
- Mount the belt adjusters **(8)** on the ends of the toothed belt and secure the countersunk screws **(9)** by bonding.
- Insert the belt adjusters into the carriage **(S)** and secure the grub screws **(3)** by bonding.
- Tension the belt as per description above and finally mount the wiper end plates **(2)** on the carriage.
  (Notice: the easiest way for mounting the wiper end plates is to secure the wipers with a rubberband while mounting.)

Check for belt tension: Set the distance between deflection unit and carriage to 300 ±3 mm (detail 4). Place the measuring device on the deflection unit or the carriage and position the sensor at 150 mm close to the toothed belt. Then use an Allen key to vibrate the belt. Adjust the belt tension to 70 ± 5 Hz.

Belt exchange ELSZ



Measure and record the distances on both sides between bearing block and belt tensioner.

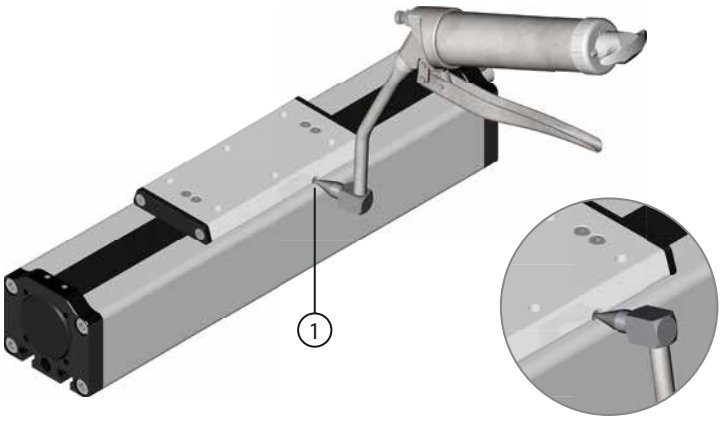
- Unscrew the fastening screws **(1)** of the belt tensioners **(2)** and remove the screws on both sides.
- Disassemble the two belt tensioners **(2)** and remove them from the toothed belt **(Z)**.
- Unscrew the fastening screws **(3)** of the omega deflection unit **(4)**.
- Remove the cover cap **(5)**.
- Pull the toothed belt **(Z)** out of the omega deflection unit **(4)**.

To mount the new toothed belt please follow the steps in reverse order.

- Cut the new toothed belt to the length of the old one.
- Thread the belt into the deflection unit, with the toothing towards the profile **(P)**.
- Retighten the omega deflection unit **(4)** with the fastening screws **(3)**.
- Re-assemble the belt tensioners **(2)** at the belt ends.
  The coutersunk head screws (9) of the belt tensioners must be secured with screw locking devices.
- Screw in the fastening screws **(1)** of the belt tensioners **(2)**.
  The fastening screws (1) must be secured with screw locking devices.
- Re-insert the **(5)** cover cap.

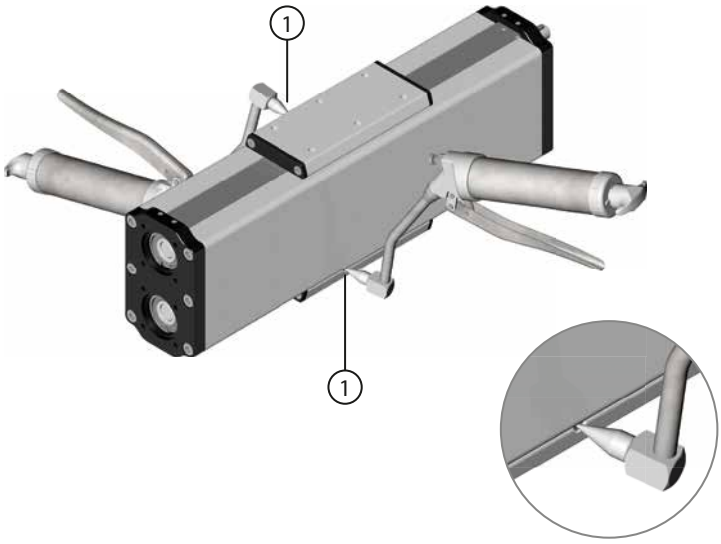
Check for belt tension: Set the distance between belt tensioner and omega deflection unit to 300 ±3 mm (detail 4). Place the measuring device on the carriage and position the sensor close to the carriage above the toothed belt. Then use an Allen key to vibrate the belt. Adjust the belt tension to 70 ± 5 Hz.

Lubrication spindle GG



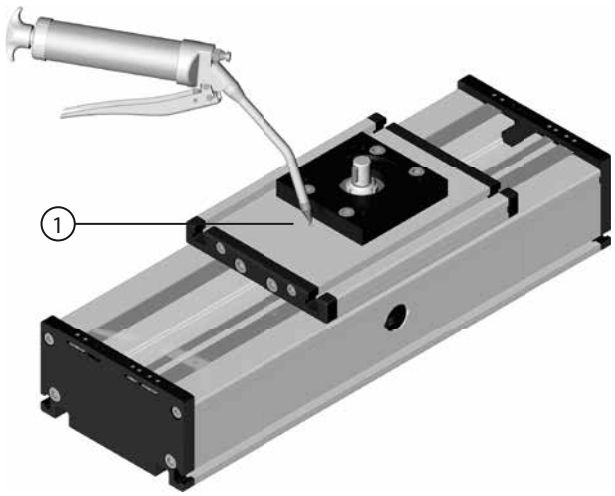
- The spindle can be relubricated through a lubricating nipple **(1)** in the carriage.
- Regrease with a grease gun.
  Grease volume 3g.
  Spindle greasing every 500 - 1000 working hours.

Lubrication spindle GDG



- All spindle can be relubricated through lubricating nipples **(1)** in the carriage.
- Regrease with a grease gun.
  Grease volume 3g.
  Spindle greasing every 500 - 1000 working hours.

Lubrication rack ELZQ



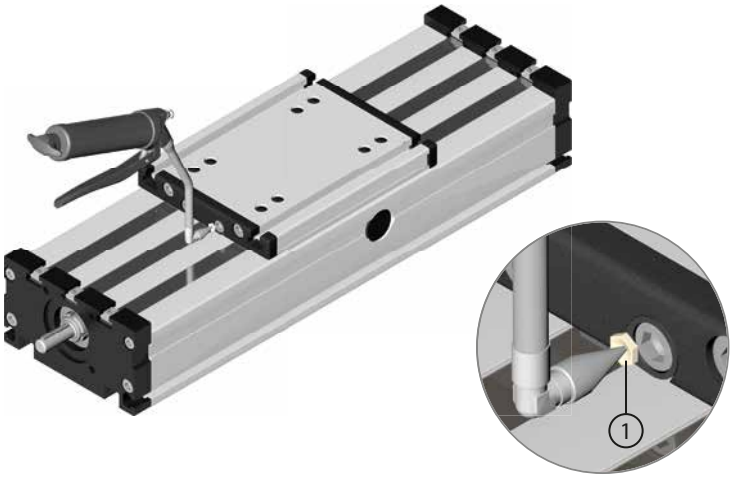
- The rack can be relubricated through a lubricating nipple **(1)** in the carriage.
- Regrease with an oil gun.

5.2

Lubrication leading-nut

DLK / DLT 120, 160, 200
DSK / DST 120, 160, 200

Applies to all positioning systems from 2017 onwards.

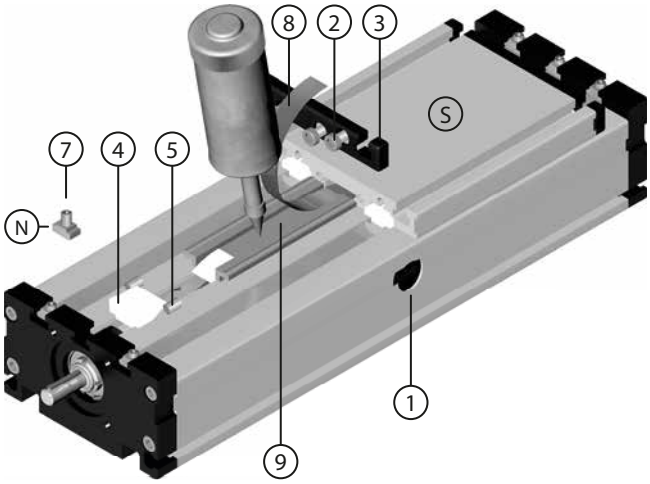


- The leading-nut can be relubricated through a lubricating nipple (1) in the carriage.
- Regrease with a grease gun.

For the quantity of grease see table below.
Spindle greasing every 500 - 1000 working hours.

Type	Pitch	Quantity	Type	Pitch	Quantity
120	KG 16 x 05	1,33 g	**120/160**	KG 25 x 25	3,00 g
120	KG 16 x 10	0,84 g	**200**	KG 32 x 05	3,00 g
120	KG 16 x 16	1,00 g	**200**	KG 32 x 10	4,00 g
120/160	KG 20 x 20	3,00 g	**200**	KG 32 x 20	4,00 g
120/160	KG 25 x 05	2,00 g	**200**	KG 32 x 32	4,00 g
120/160	KG 25 x 10	3,00 g			

Lubrication leading-nut

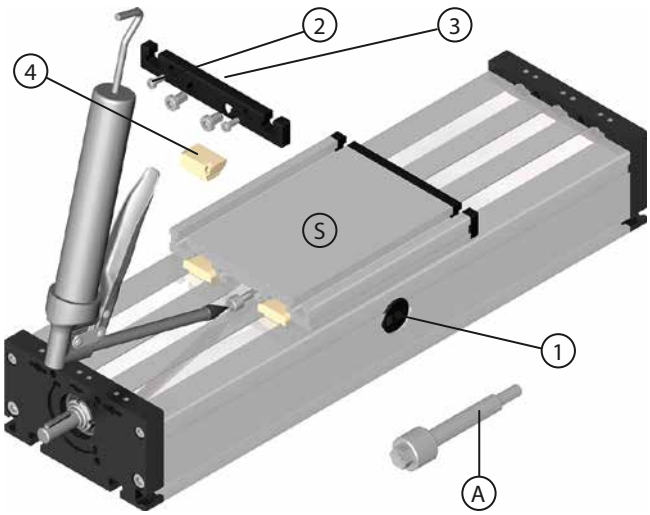


DLK / DLT 120, 200
DSK / DST 120, 200

Applies to all positioning systems up to December 2016.

- Drive the carriage (S) to the service position (1).
- Remove the fillister head screws (2) and dismount cover cap (3).
- Remove the middle slider (4) and unscrew set screws (5).
- Push carriage (S) to the side.
- Release the set screw (7) and remove it using the sliding nut (N).
- Pull out and lift the cover band (8), now the lubrication hole is visible in the leading-nut receptacle (9).
- Regrease with grease gun.

  For the quantity of grease see table below.



DLT / DLK 160
DST / DSK 160

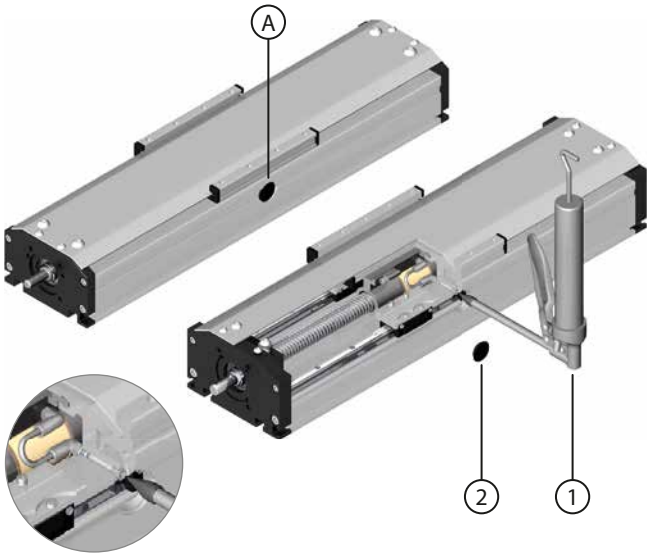
Applies to all positioning systems up to December 2016.

- Drive the carriage (S) to the service position (1).
- Remove the fillister head screws (2) and dismount cover cap (3).
- Remove the middle slider (4).
- Insert the regreasing adapter (A) into the lubrication hole of the leading-nut receptacle.
- Regrease now with grease gun. For the quantity of grease see table below.

  Spindle greasing every 500 - 1000 working hours.

Type	Pitch	Regreasing	Type	Pitch	Regreasing
120	KG 16 x 05	1,33 g	**120/160**	KG 25 x 25	3,00 g
120	KG 16 x 10	0,84 g	**200**	KG 32 x 05	3,00 g
120	KG 16 x 16	1,00 g	**200**	KG 32 x 10	4,00 g
120/160	KG 20 x 20	3,00 g	**200**	KG 32 x 20	4,00 g
120/160	KG 25 x 05	2,00 g	**200**	KG 32 x 32	4,00 g
120/160	KG 25 x 10	3,00 g			

Lubrication leading-nut



DST/K 120 P, 160 P and 200 P

- Drive the carriage to the service position **(A)**.
- Dismount the cover cap **(2)**. Regrease with an grease gun **(1)**. For the quantity of grease see table below.

Spindle greasing every 500 - 1000 working hours.

Type	Pitch	Regreasing	Type	Pitch	Regreasing
120	KG 16 x 05	1,33 g	**120/160**	KG 25 x 25	3,00 g
120	KG 16 x 10	0,84 g	**200**	KG 32 x 05	3,00 g

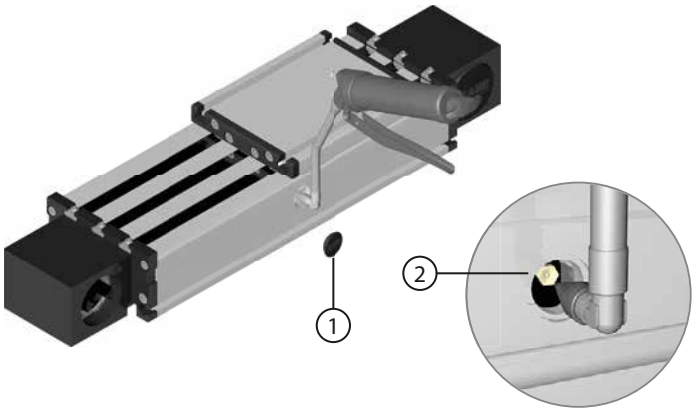
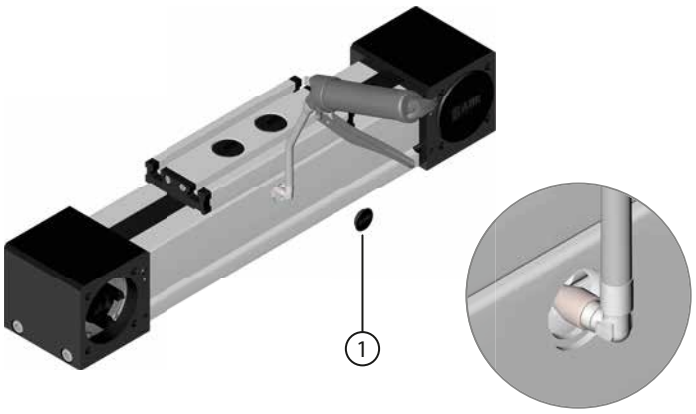
120/160	KG 25 x 05	2,00 g	**200**	KG 32 x 32	4,00 g
120/160	KG 25 x 10	3,00 g			

5.2

Lubrication guiding rods





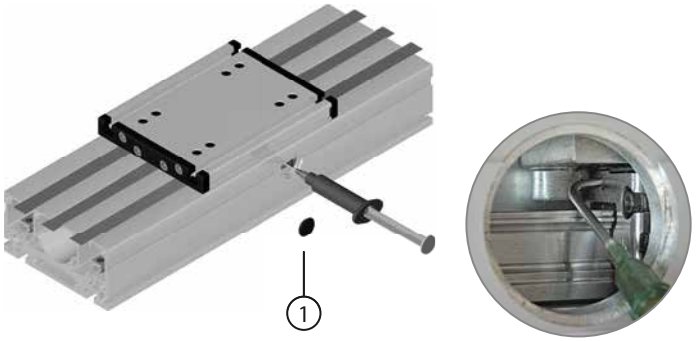
DL 120, 160, 200
QL 60, 80, 100

Lubrication is effected by an oiled felt insert. The felt can be re-oiled through lubrication nipples attached laterally to the ends of the roller packs.

- Dismount cover cap **(1)**.
- Drive the carriage through the service position until you can see the first lubricating nipple **(2)** in the lubrication hole.
- Re-oiled felt now with an oil gun.
- Move the carriage to the second lubricating nipple and re-oiled here as well.

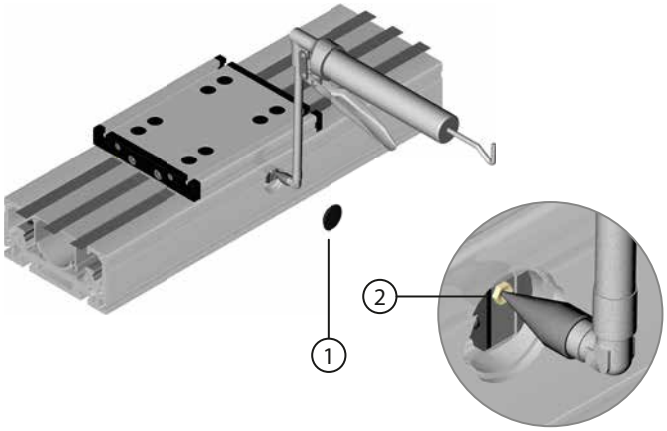
Oils with a viscosity of approx. 200 mm²/s at T=40°C are recommended. The required regreasing intervals depend on environmental conditions, the standard recommendation is once per month. To ensure a sufficient lubrication, the minimum stroke must equal the carriage length, so that sufficient greasing is achieved also in the final positions.

Lubrication runner blocks *DS 120*



- Dismount cover cap **(1)**.
- Drive the carriage through the service position until you can see the first runner block in the lubrication hole.
- Re-greasing with a cartridge with cannula.
- Move the carriage to the next runnerblock and re-grease here as well.

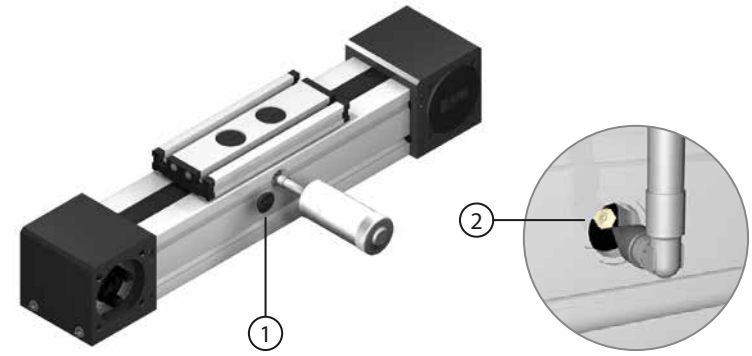
Lubrication runner blocks *DS 160, 200 QS 60, 80, 100*



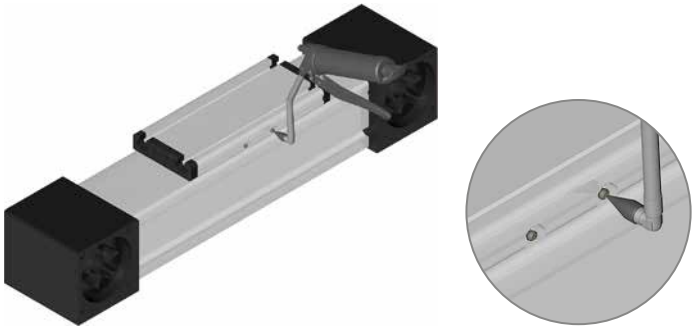
Runner blocks have to be regreased with high quality bearing grease.

- Dismount cover cap **(1)**
- Drive the carriage through the service position until you can see the first greasing nipple **(2)** in the lubrication hole.
- Re-greasing with grease gun.
- Move the carriage to the second greasing nipple and re-grease here as well.

We recommended bearing grease based on DIN 51825. The required regreasing intervals depend on environmental conditions, the standard recommendation is once per 1.000 km. *DS 120: 150 km*



Lubrication runner blocks *QS 125*



Re-greasing with a grease gun directly at the carriage side.

Relubrication			
Type	**Quantity**	**Type**	**Quantity**

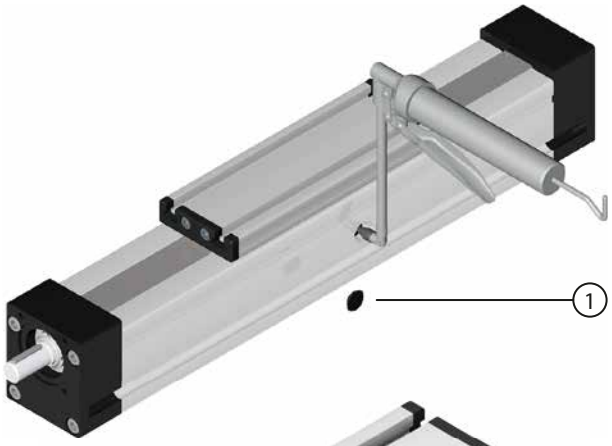
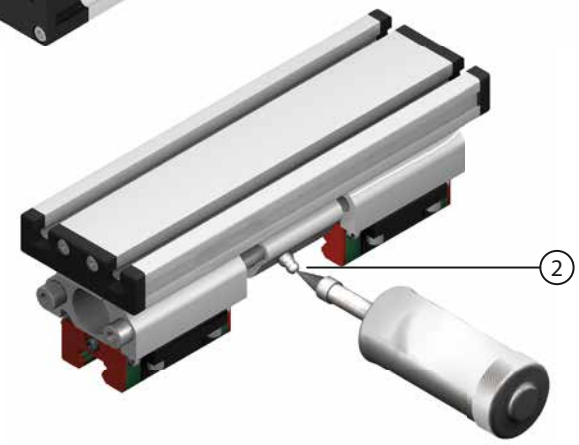
DS 160	0,4ml	QS 80	0,5ml
DS 200	0,8ml	QS 100	0,8ml
		QS 125	1,2ml

Q - units

Lubrication leading-nut ***QST / QSK 60, 80, 100***





Leading-nuts have to be regreased with high quality bearing grease.

- Dismount cover cap **(1)**.
- Drive the carriage through the service position until you can see the first greasing nipple **(2)** in the grease hole.
- Regrease felt now with an grease gun.
- Move the carriage to the second greasing nipple and re-grease here as well.

We recommended bearing grease based on DIN 51825. The required regreasing intervals depend on environmental conditions, the standard recommendation is once per 1.000 km.

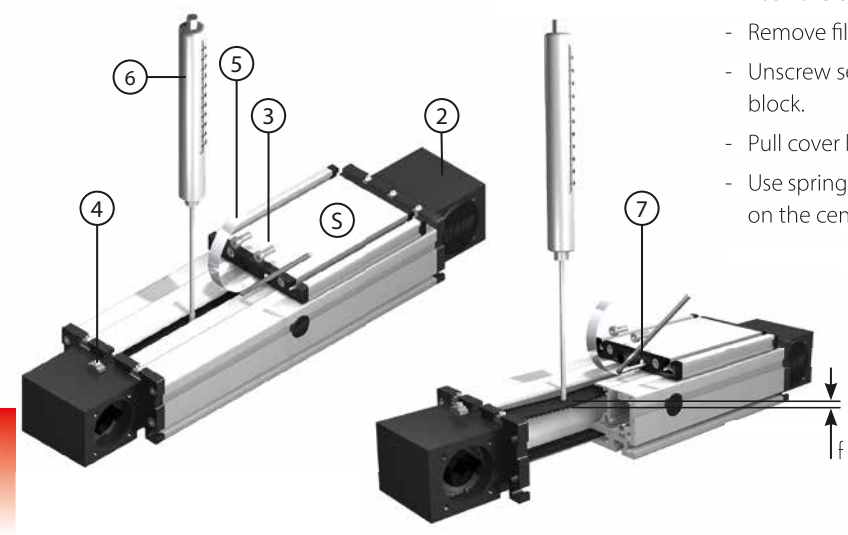
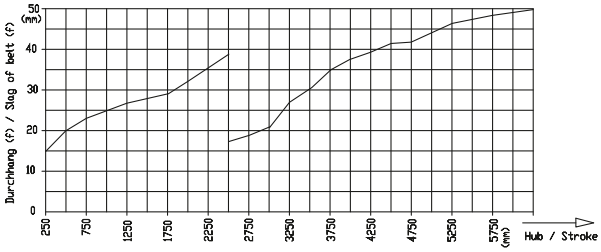
Belt tension adjustment
DLZ / DSZ 120, 160, 200



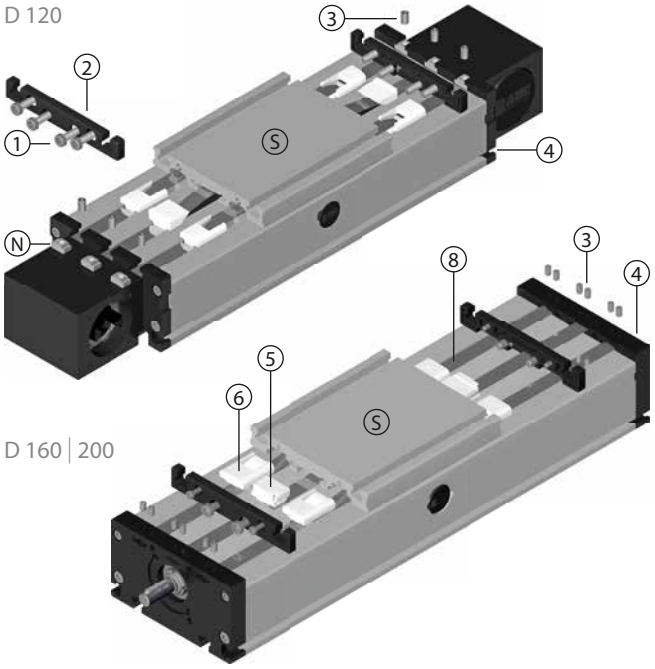
- Push the carriage (S) close to one bearing block (2).
- Remove fillister head screws (3).
- Unscrew set screws (4) for middle cover band (5) at the opposite bearing block.
- Pull cover band out of bearing block and turn it to the side.
- Use springe balance (6) to exert the applicable amount of force (see table) on the center of the belt and measure the sag (f).
  - Compare the measured value with the diagram below, and tense of release belt as required by tightening or unscrewing the set screws (7).
  - The set screws (7) must be bonded in place with screw locking device.
  - Both screws (7) must be screwed in to exactly the same level. Check with sliding caliper.

Size	Stroke (mm)	Force (N)
120	< 2500 2500 - 6000	20 10
160	< 2500 2500 - 6000	20 10
200	< 2500 2500 - 6000	40 20



Changing cover band

D 120

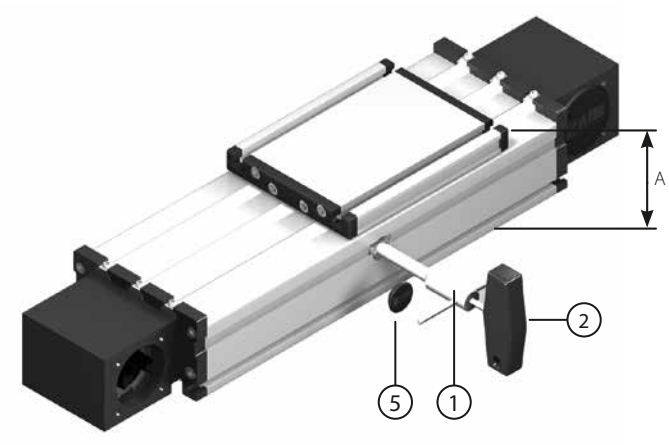


D 160 | 200

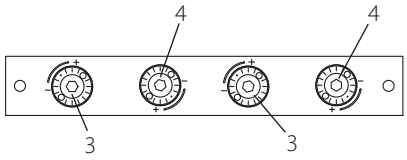
DLZ / DSZ 120, 160, 200
DLT / DLK / DST / DSK 120, 160, 200

- Drive the carriage (S) to servicing position.
- Remove fillister head screws (1) and wiper end plate (2).
- **Size 160 and 200:** Unscrew set screws (3) at both bearing-block plates (4) and pull the cover band out of the bearing block.
- **Size 120:** Unscrew set screws (3) and remove them with T-nut (N).
- Remove the sliders (5) and (6) from both sides of the carriage (S).
- Pull the cover bands (8) out of the carriage (S).
- Insert the new cover bands into the carriage (S).
- Thread the lateral sliders (6) onto the cover band and insert it into the carriage with middle slider (5).
- **Size 160 and 200:** Tighten cover bands on one side of the bearing block with set screws (3), tense cover band (8) at the other bearing block using pliers and tighten with set screws (3).
- **Size 120:** Insert T-nut together with set screw into the bearing block plates (4) and tighten cover band (8) with set screw (3).

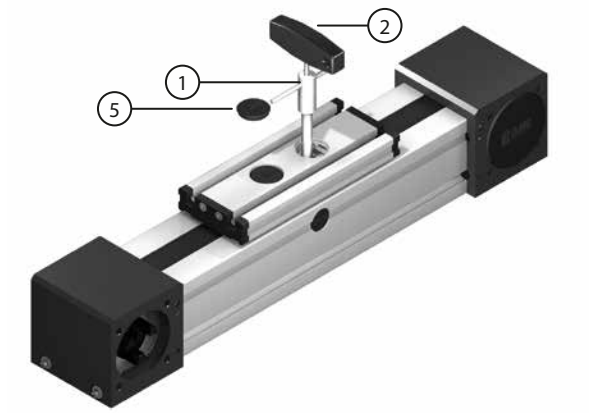
Adjusting the rollers
DL 120, 160, 200



- Dismount cover cap **(5)** from servicing hole.
- Fasten eccentric bolt with screw key **(1)**.
- Release screws with hexagon socket screw key **(2)** until the eccentric bolt can be turned.
- Adjust the gap dimension **(A)** between top of the carriage and body ground of guiding profile by turning the eccentric bolts **(3)**. Turning towards + will increase the dimension A.
  DL 120: A=79 mm; **DL 160:** A=106 mm; **DL 200:** A=129 mm
- Turn the eccentric bolts **(4)** to adjust the carriage free of play by the touch (without initial tension).
- Ensure that the eccentric bolts are adjusted to the right.

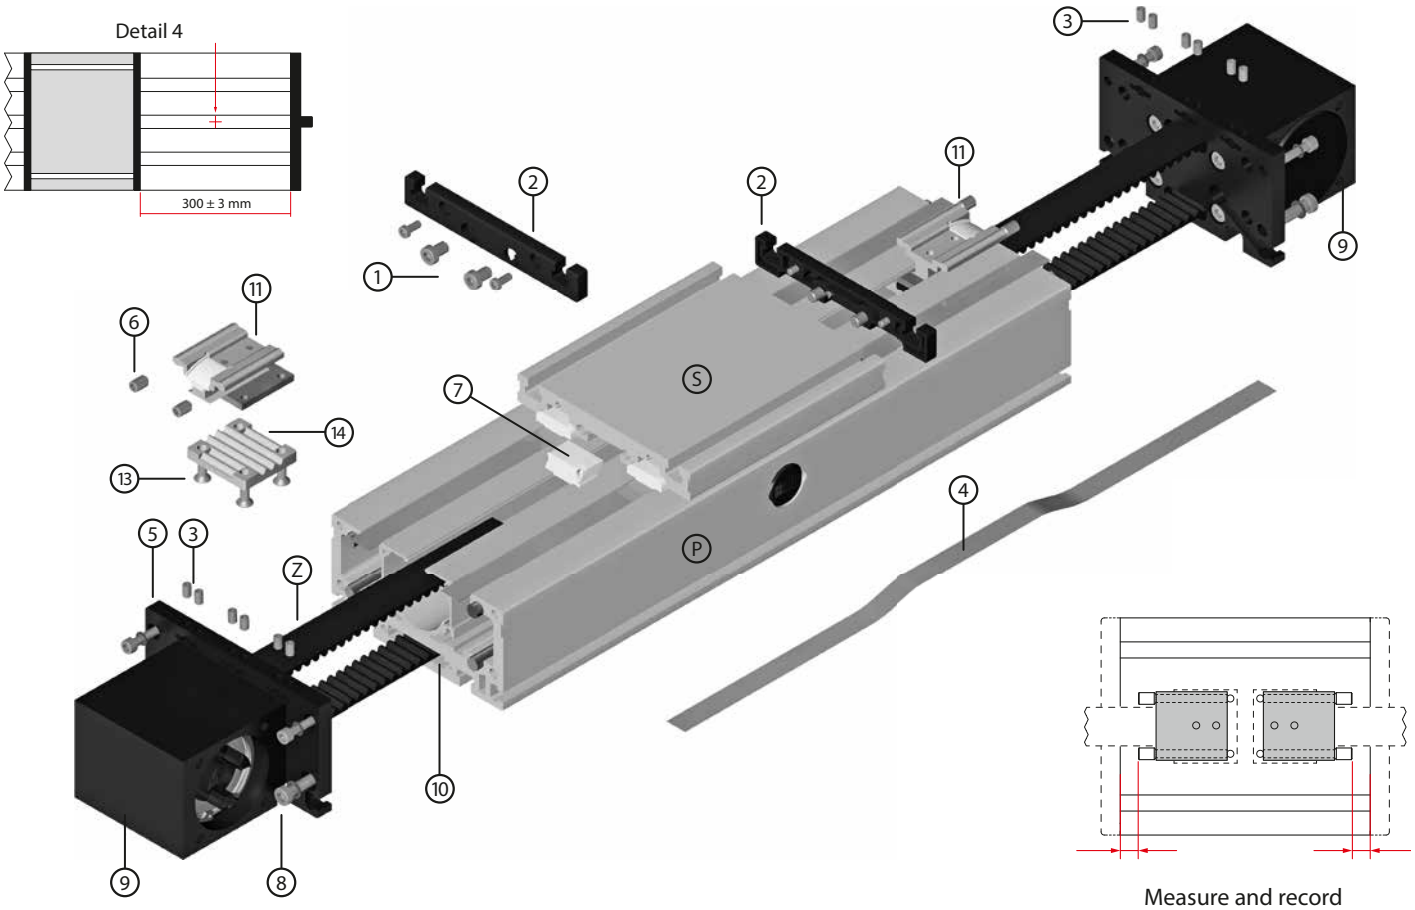


Adjusting the rollers
QL 60, 80, 100



- Dismount cover cap **(5)** from servicing hole.
- Fasten eccentric bolt with screw key **(1)**.
- Release screws with hexagon socket screw key **(2)** until the eccentric bolt can be turned.
- Turn the eccentric bolts to adjust the carriage free of play (without initial tension).
- Ensure that the eccentric bolts are adjusted to the right.

Belt exchange DL / DS 120, 160, 200



Measure and record the screw depth.

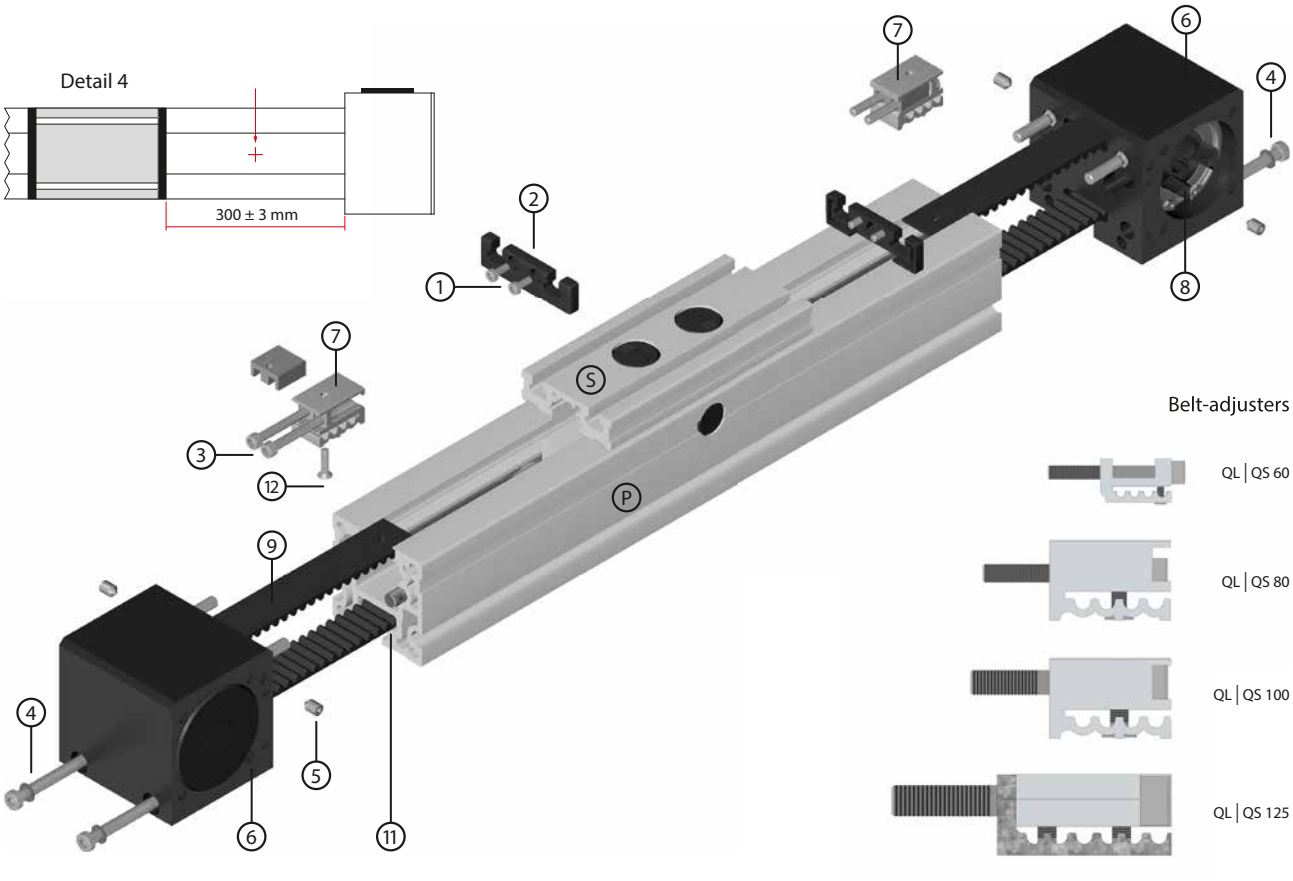
- Unscrew cylindric screws **(1)** and dismount the wiper end plates **(2)** on both sides of the carriage.
- Unscrew grub screws (3) on both sides of the unit and pull out only the middle cover band **(4)** of the bearing-block plate **(5)**.
- Pull only the middle sliding block **(7)** out of the carriage.
- The belt adjusters are fixed by grub screws **(6)** in the carriage **(S)**; to reach the right belt tension, measure the distance between the edge of the carriage **(S)** and the head of the grub screws **(6)**.
- Unscrew grub crews **(6)** on both sides of the carriage **(S)**.
- Unscrew cylindric screws **(8)** at the bearing-block plates **(5)** and dismount them completely with the bearing-blocks **(9)** at both ends of the unit.
- Pull out the belt-adjusters **(11)** completely with the belt out of the carriage **(S)** and the guiding-profile **(P)**.
- Unscrew the countersunk head screws **(13)** and dismount the belt-adjuster **(11,14)**.

Reconstruction of the unit in opposed order.

- Shorten the new belt to the length of the old one.
- Push the belt with teeth side up to the carriage **(S)** into the slot of the guiding-profile **(10)** and push it with the ends through each bearing-block **(9)**.
- Mount the belt-adjusters **(11,14)** by the countersunk head screws **(13)**. *Secure the countersunk head screws (13) by bonding.*
- Push them again together with the belt **(Z)** into the guiding-profile **(P)** and then into the carriage **(S)**.
- Mount the bearing-block plates **(5)** again together with the bearing-blocks **(9)** at the ends of the unit.
- Screw the grub screws **(6)** into the carriage **(S)** as far as the recorded screwing depth. ***Secure the grub screws (6) by bonding.***
- Pull the middle cover-band **(4)** through the carriage **(S)**.
- Pull in the middle sliding block **(7)** into the slot of the carriage **(S)**.
- Mount the grub screws **(3)** on one side of the unit and tension the 3 cover-bands from the other side and fix them too by the grub-screws **(3)**.
- Finally mount the wiper end plates **(2)** on the carriage.

Check for belt tension: Set the distance between deflection unit and carriage to 300 ±3 mm (detail 4). Place the measuring device on the deflection unit or the carriage and position the sensor at 150 mm close to the toothed belt. Then use an Allen key to vibrate the belt. Adjust the belt tension to 70 ± 5 Hz.

Belt exchange QL / QS



- Unscrew cylindric screws **(1)** and dismount the wiper end plates **(2)** on both sides of the carriage.
- Unscrew cylindric screws **(3)** on both sides of the carriage **(S)**.
- Unscrew cylindric screws **(4)** and the grub screws **(5)** at the bearing-block **(6)** and dismount them completely at both ends of the unit.
- Pull out the belt-adjusters **(7)** completely with the belt out of the carriage **(S)** and the guiding-profile **(P)**.
- Dismount the belt-adjusters. Unscrew the countersunk screws **(12)** from the belt-adjusters. Press the belt sideways out of both belt-adjusters **(7)**.
- Pull the belt **(9)** completely out of the bearing-blocks **(6)**.

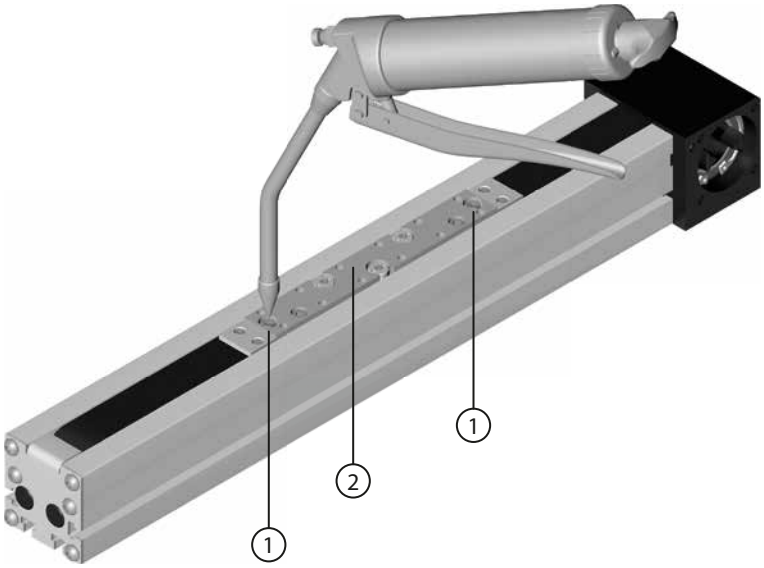
Reconstruction of the unit in opposed order.

- Shorten the new belt to the length of the old one. The pre-existing holes must be drilled into the new toothed belt in the flank diameter of the screw **(12)**.
- Push the belt with teeth side up to the carriage **(S)** into the slot of the guiding-profile **(11)** and push it with the ends through each bearing-block **(6)**. **Tip:** rotate the toothed pulley **(8)** until the toothed belt appears through the bearing-block **(6).**
- Press the belt again into the belt-adjusters **(7)**. *Secure the countersunk screws (12) by bonding.*
- Push them again together with the belt into the guiding-profile **(P)** and then into the carriage **(S)**.
- Mount the bearing-blocks **(6)** again.
- Mount both belt-adjusters **(7)** into the carriage **(S)**. *Secure the cylindric screws (3) by bonding.* You have to tension the belt with dosed force and test the soft running of the pulleys by turning them.
- Mount the the wiper end plates **(2)** again.

Check for belt tension: Set the distance between deflection unit and carriage to 300 ±3 mm (detail 4). Place the measuring device on the deflection unit or the carriage and position the sensor at 150 mm close to the toothed belt. Then use an Allen key to vibrate the belt. Adjust the belt tension to 70 ± 5 Hz.

5.2

Lubrication LLZ / LLZE

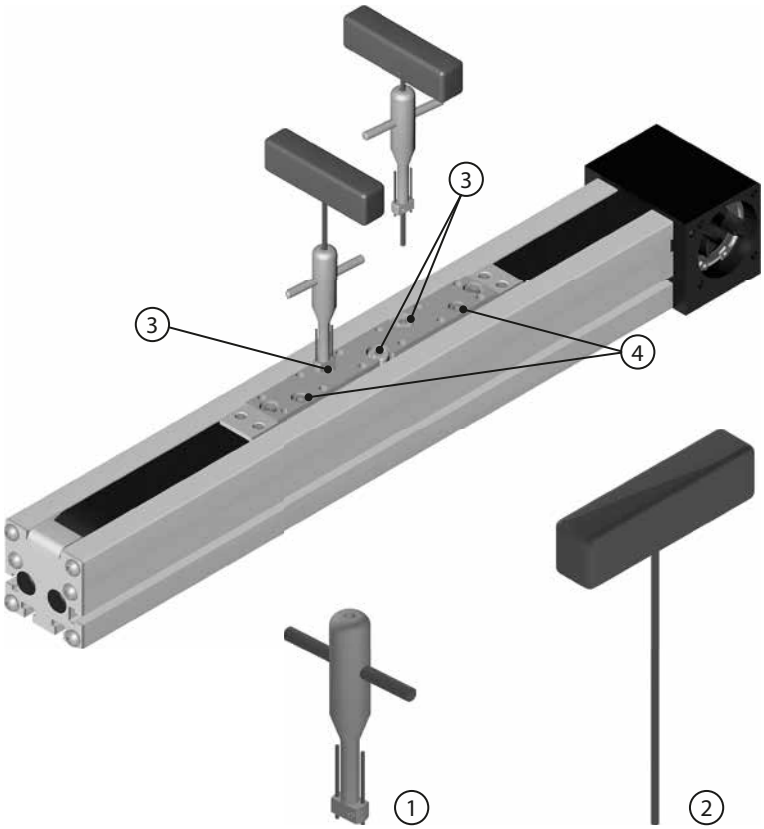


Rods will be greased by the strippers of carriage.

There are 2 oil nipples **(1)** in the carriage **(2)**, where the tanks for the strippers can be filled with an oil gun.

Viscosity of oil: 200 mm²/s, T= 40° C. Interval of greasing depends on environmental conditions, min. once a month. Minimum stroke must be same than length of slide.

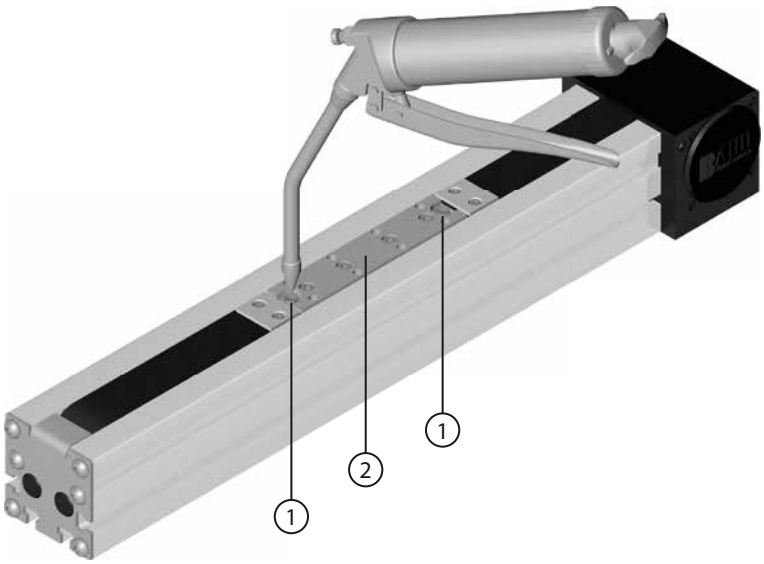
Adjusting the rollers LLZ / LLZE



1. Eccentric key for tightening the 2-hole counternut.
2. Hexagon socket for adjusting the eccentric.
3. Adjustable rollers
4. Non adjustable rollers

- Loose the 2-hole counter nut with the eccentric key **(1)**.
- Try to turn the eccentric with the hexagon socket **(2)**. The eccentric must be movable.
- Turn the eccentric with the hexagon socket closly and delicately to the right, until the eccentric is playless.
- Now fix the eccentric with the hexagon socket **(2)** and tighten the 2-hole nut by a turn to the right.

Lubrication LSZ / LSZE

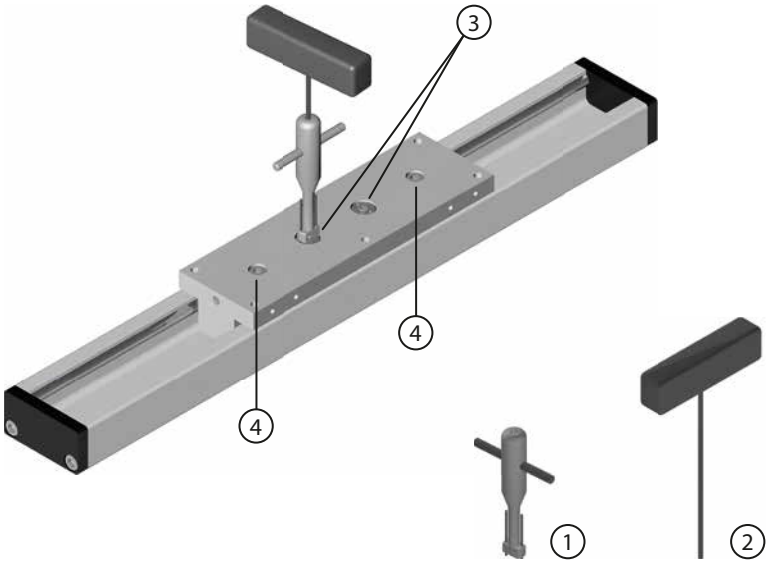


In the carriage **(2)** are two greasing nipples **(1)** , where the runner blocks can be filled with an grease gun.

We recommended bearing grease based on DIN 51825. The required regreasing intervals depend on environmental conditions, the standard recommendation is once per 1.000 km.*

Relubrication	
Type	**Quantity**
LS 60	0,4 ml
LS 80	0,5 ml

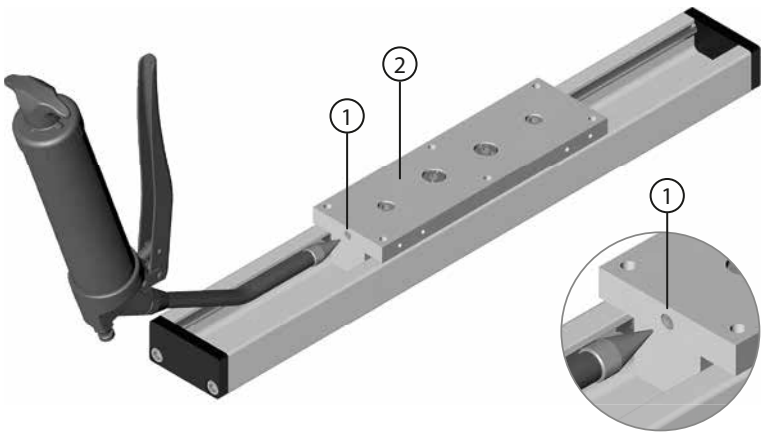
Adjusting the rollers UL



1. Eccentric key for tightening the 2-hole counternut.
2. Hexagon socket for adjusting the eccentric.
3. Adjustable rollers
4. Non adjustable rollers

- Loose the 2-hole counter nut with the eccentric key **(1)**.
- Try to turn the eccentric with the hexagon socket **(2)**. The eccentric must be movable.
- Turn the eccentric with the hexagon socket closly and delicately to the right, until the eccentric is playless.
- Now fix the eccentric with the hexagon socket **(2)** and tighten the 2-hole nut by a turn to the right.

Lubrication UL

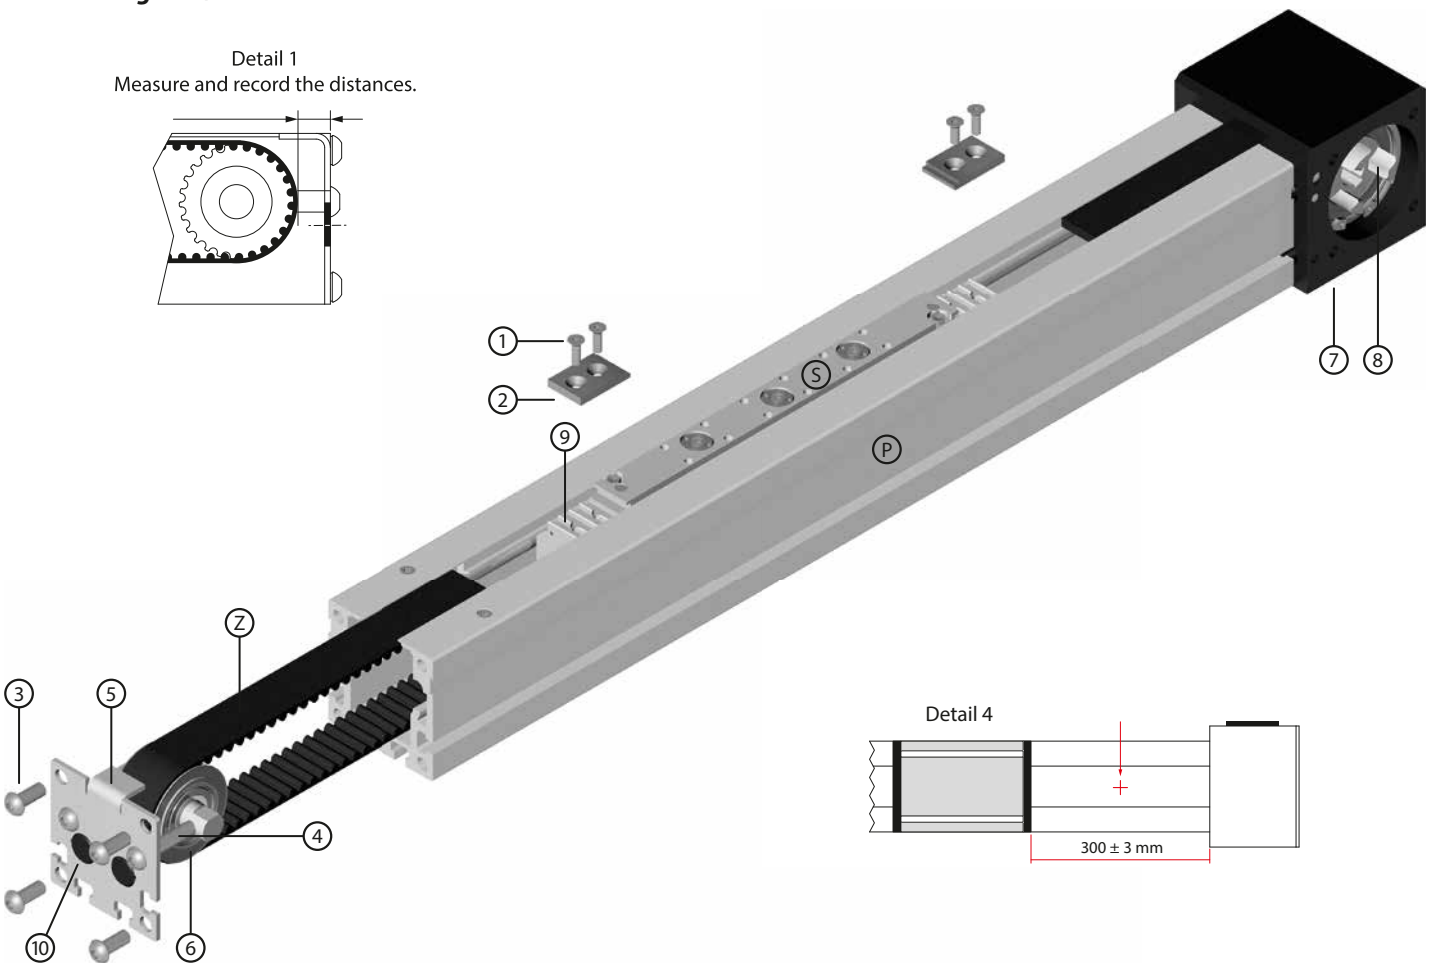


Rods will be greased by the strippers of carriage.

There are 2 oil nipples **(1)** in the carriage **(2)**, where the tanks for the strippers can be filled with an oil gun.

Viscosity of oil: 200 mm²/s, T= 40° C. Interval of greasing depends on environmental conditions, min. once a month. Minimum stroke must be same than length of slide.

Belt exchange LL / LS



Remove the cover caps (10). Measure and record the distance between bearing block and belt (Detail 1).

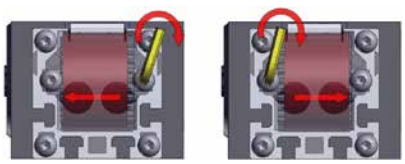
- Unscrew the fastening screws (2 pcs.) **(4)** and remove the bearing block **(5)**.
- Unscrew the countersunk screws **(1)** and remove the fixing plates for the belt **(2)**.
- Unscrew the fastening screws (4 pcs.) **(3)**.
- Pull the toothed pulley **(6)** with timing belt **(Z)** out of the guide profile **(P)**.

To mount the new toothed belt please follow the steps in reverse order.

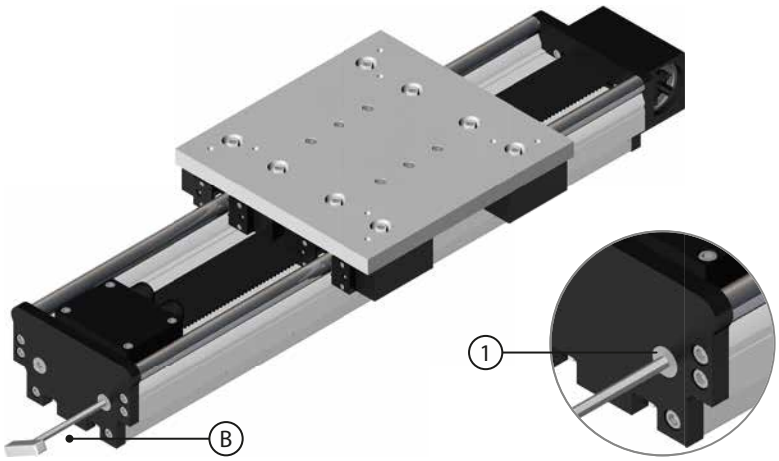
- Cut the new toothed belt to the length of the old one. The pre-existing holes must be drilled into the new toothed belt in the flank diameter of the screw **(1)**.
- Push the belt with teeth side up to the carriage **(S)** into the guiding-profile **(P)** and push it with the ends through each bearing-block **(7)**. (Tip: rotate the toothed pulley **(8)** until the toothed belt appears through the bearing-block **(7)**.
- Reposition the toothed pulley **(8)**.
- Press the belt again into the belt-adjusters **(9)**, remove the fixing plates **(2)** and screw in with the countersunk screws **(1)**. *Secure the countersunk screws (1) by bonding.*
- Screw the fastening screws **(3)** of the bearing plate back in place.
- Screw fastening screws **(4)** back in place to tension the toothed belt. Pay attention to the recorded screw-in depth (Detail 3). *Secure the countersunk screws (4) by bonding.*
- The timing belt can be adjusted with the aid of the fastening screws **(4)**. *Attention, you have to push the carriage by hand.*
- Re-insert the **(10)** the cover caps.

Check for belt tension: Set the distance between deflection unit and carriage to 300 ±3 mm (detail 4). Place the measuring device on the deflection unit or the carriage and position the sensor at 150 mm close to the toothed belt. Then use an Allen key to vibrate the belt. Adjust the belt tension to 70 ± 5 Hz.

Detail 3



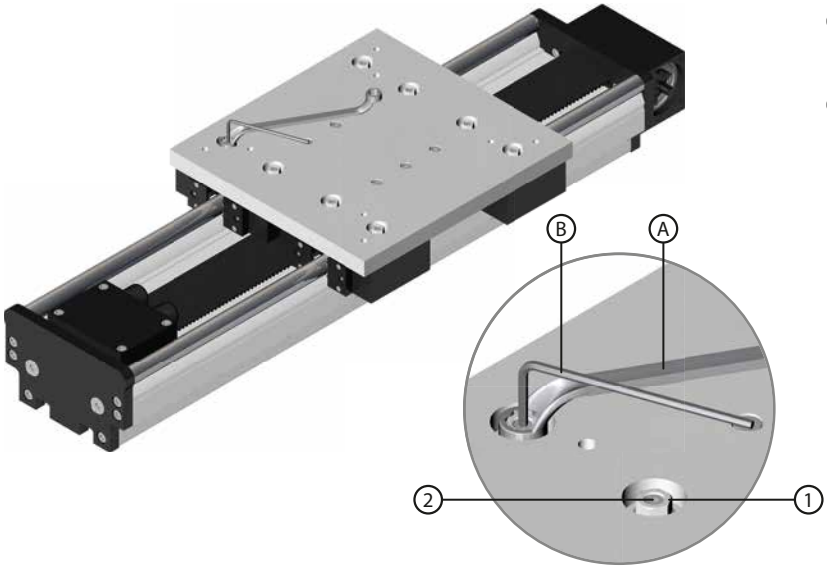
ALLZ 203, 204 belt tension adjustment



(B) Hexagon socket wrench SW 10
for belt adjustment screw **(1)**

Adjust the belt adjustment screws **(1)** evenly and in accordance with the respective application.

ALLZ 203, 204 roller adjustment

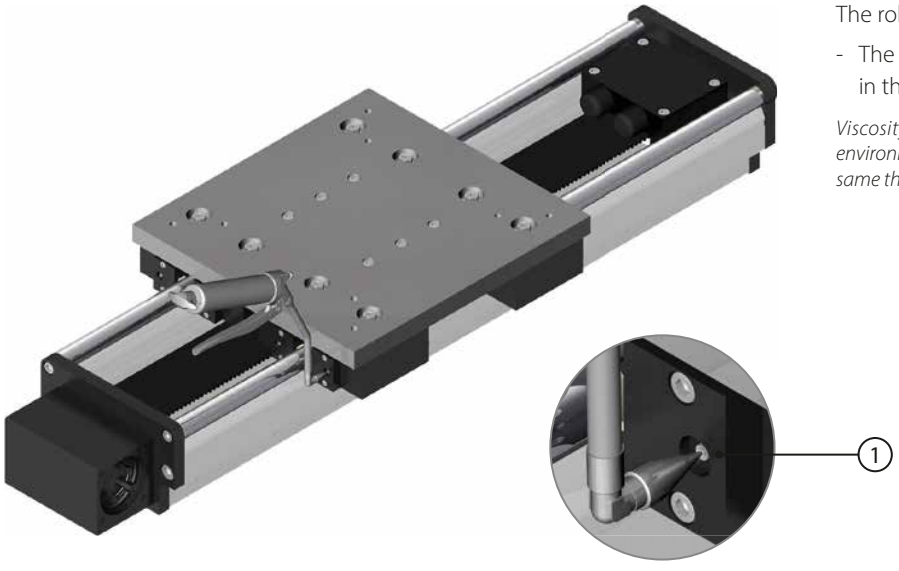


(A) **Ring wrench** (cranked)
for tightening and fixing the hexagon nut.

(B) **Hexagon socket wrench**
for adjusting the eccentrics.

- Loosen the hexagon screw **(1)**, so that the eccentric can be rotated.
- Adjust the carriage without backlash by rotating the eccentrics **(2)** in small increments.
- After the eccentrics have been adjusted, fix the eccentric using the hexagon socket wrench **(B)** and tighten the hexagon socket **(1)** using the cranked ring wrench **(A)**.

ALL roller lubrication

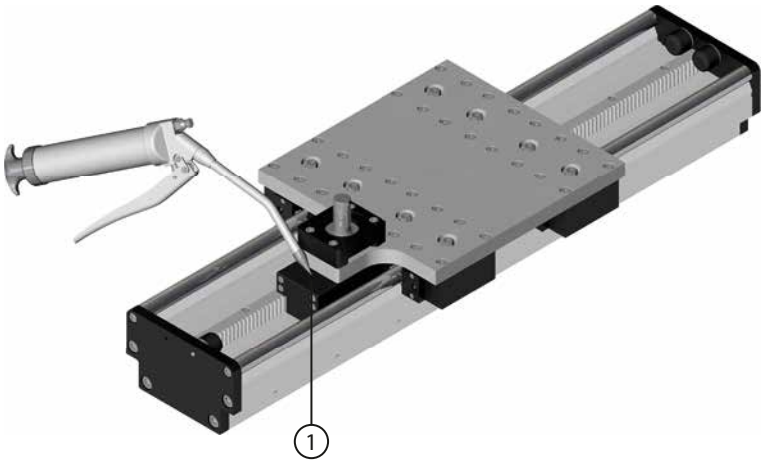


The rollers are lubricated by means of an oiled felt insert.

- The felt can be relubricated through lubricating nipples **(1)** in the carriage.

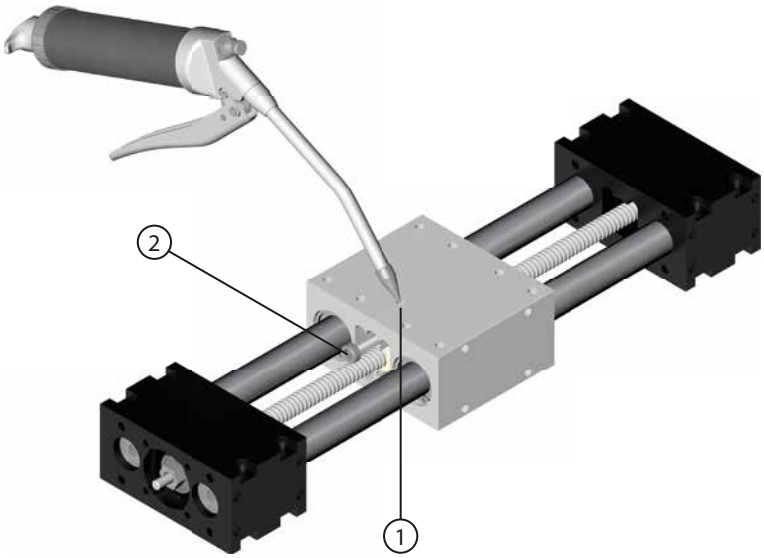
Viscosity of oil: 200 mm²/s, T= 40° C. Interval of greasing depends on environmental conditions, min. once a month. Minimum stroke must be same than length of slide.

Lubrication rack ALLZQ



- The rack can be relubricated through a lubricating nipple **(1)** in the carriage.
- Regrease with an oil gun.

Spindle lubrication WGT/K - WKT/K



- The spindle can be relubricated through a lubricating channel **(1)** in the carriage.
- Unscrew the fastening screw **(2)** before lubricating.
- Regrease with grease gun.

For mass of greasing look at table below.
Spindle greasing every 500-1000 working hours.

Terms and conditions of sale and payment

Terms and conditions of sale and payment

§ 1 Scope of the General Terms and Conditions

(1) The Supplier's deliveries, services and offers are made solely on the basis of these General Terms and Conditions. Thus, these General Terms and Conditions shall also apply to all future business relations, even if not explicitly agreed upon again. At the latest, these General Terms and Conditions shall be considered accepted upon acceptance of the goods or services. Any counter confirmations made by the Customer with reference to its own terms and conditions are hereby rejected.

(2) All agreements made between the Supplier and the Customer for the purpose of the fulfilment of this contract must be in writing.

§ 2 Offer and Conclusion of Contract

(1) Offers made by the Supplier are non-binding and subject to change. Any declarations of acceptance and all orders require the Supplier's confirmation in writing or by fax to be legally binding. The contract is deemed to be concluded upon the Supplier's sending a written declaration (acknowledgement of order), which shall be the decisive document determining the scope of its obligations. The delivery substitutes a written acknowledgement of order.

(2) The performance parameters specified in our catalogues and offers, such as illustrations, drawings etc., shall be considered as approximate only. Drawings, illustrations, dimensions, weights or other performance data are only binding if they have been explicitly agreed on in writing. The Supplier reserves, without restriction, all rights of ownership and copyright to any quotations, drawings and other documents (hereinafter collectively referred to as the "Documents"). These Documents may not be made accessible to any third parties without the Supplier's prior consent; should the order not be placed with the Supplier, such documents are to be returned to the Supplier immediately on request.

(3) The Supplier's sales staff is not authorised to make any verbal collateral agreements or to give any verbal assurances that go beyond the content of the written contract.

(4) The Customer is liable for the accuracy, correctness and completeness of the order documents and order information provided by it; this includes in particular drawings as well as technical specifications and samples. Any verbal information, also with regard to modifications or amendments to the documents and data already submitted, must be confirmed in writing. If an order is neither confirmed in writing nor executed by the Supplier within one month of its receipt, or in particular cases (e.g. in case of custom-made products) within three months of receipt – in which case the Customer is bound by its order during such period – the Customer shall be entitled to revoke its order without having the right to claim damages from the Supplier.

§ 3 Prices

(1) Unless stated otherwise, the Supplier is bound by the prices given in its quotations for a period of 30 days from their date of issue. Otherwise the prices mentioned in the Supplier's acknowledgement of order shall apply, which do not include the applicable legal value added tax, nor any cost of installation, start-up and assembly. Additional deliveries and services will be invoiced separately. Minimum order value 25 Euro.

(2) Unless otherwise agreed, the prices are FOB Luhden warehouse, excluding packaging, freight, postage and insurance cost. The type of packaging shall be chosen by the Supplier at its discretion. The packaging shall be invoiced to the Customer at cost price and will not be taken back by the Supplier.

§ 4 Time of Delivery and Performance / Acceptance

(1) Delivery dates or periods, which may be agreed upon in a binding or non-binding manner, must be specified in writing. Our delivery period begins with the date of our acknowledgement of order, provided that at this time all of the documents required from the Customer, the necessary permits, releases, clarifications and approvals of plans have been submitted and the agreed payment terms and other obligations have been fulfilled and, in addition, any and all technical issues that were still open when the contract was signed have been mutually agreed upon. If these prerequisites are not met in time, the delivery period will be prolonged accordingly.

(2) The Supplier is not liable for delays in delivery and performance, even if binding dates and times have been agreed upon, in cases of force majeure or in case of circumstances which substantially and not only temporarily impede the delivery or make it impossible - this includes in particular strike, lock-out, government orders, malfunction or breakdown of important production facilities/machines, delays in the supply of essential raw materials and utilities, delays in transport, etc.; this applies also when these circumstances affect our suppliers or their sub-suppliers. In such cases, the Supplier shall be entitled to delay the supply and/or performance for the duration of the hindrance plus an appropriate start-up time or to withdraw totally or in part from that part of the contract which is not yet fulfilled.

(3) If the hindrance lasts for longer than 3 months, the Customer shall be entitled, after granting a reasonable extension of time, to withdraw from that part of the contract which is not yet fulfilled. Should the delivery time be extended or should the Supplier be released from its obligations, the Customer shall have no right to claim compensation for damages. The Supplier may only invoke the aforementioned circumstances, if the Customer is informed accordingly without delay.

(4) In as far as the Supplier is responsible for the non-compliance with bindingly promised deadlines and dates, or in as far as the Supplier is in default, the Customer shall be entitled to compensation for delayed performance at the amount of 1/2% of the invoice value for each complete week of the delayed performance, but limited in total to a maximum of 5% of the invoice value of all deliveries and services affected by the delay. Any claims beyond this are excluded, unless the delayed performance is based on at least gross negligence by the Supplier.

(5) The Supplier is at all times entitled to make partial deliveries or to render partial services, unless such partial deliveries or partial services are not of interest to the Customer.

(6) If a formal acceptance procedure of the delivered materials is desired, the conditions of such procedure must be established at the latest upon conclusion of the contract. The acceptance procedure must be carried out at the Supplier's premises immediately after it has declared its readiness for acceptance. The cost of the acceptance procedure shall be borne by the Customer. Partial deliveries are permissible.
In all other cases, the delivery object is deemed to be accepted when it is taken into operation in accordance with its intended use, however at the latest 3 weeks after delivery to the Customer.

(7) If the Customer is in default of acceptance, the Supplier shall be entitled to claim compensation for any damages it has incurred; upon default of acceptance, the risk of accidental deterioration or accidental loss passes to the Buyer.

§ 5 Transfer of Risk

The risk is transferred to the Customer as soon as the consignment has been handed over to the person responsible for the transport or has left the Supplier's warehouse for the purpose of dispatch, irrespective of who bears the freight costs. If the delivery is delayed upon the Customer's request, the risk shall pass to the Customer when the notice is given that the goods are ready for delivery. Any storage costs incurred after the transfer of risk shall be borne by the Customer. At the Customer's request and expense, the Supplier shall insure shipments against the usual transport risks.

§ 6 Customer's Rights in Case of Defects

(1) The products are delivered free of defects in design, manufacturing and materials; the period for assertion of claims for defects is one year from the transfer of risk. This does not apply to claims for damages caused by defects. In case of claims for damages caused by defects, section 13 shall apply.

Terms and conditions of sale and payment

(2) Should the Supplier's operating or maintenance instructions not be observed, or should the products be modified, parts exchanged or consumables used which do not comply with the original specifications, then any claims for defects of the products shall become void, if the Customer cannot refute a relevant substantiated statement claiming that one of these circumstances has caused the defect. The same applies if the deficiencies are due to poor installation, wrong assembly, poor maintenance, defective or negligent treatment or storage, defective repairs not executed by the Supplier, modifications made without our written consent, excessive load, unsuitable conditions of use and inappropriate operating materials or to any chemical, electro-chemical or electrical influences for which we are not responsible as well as weather or other natural influences.

(3) Any claims made by the Customer relating to defects require the Customer to have duly fulfilled its obligations according to section 377 of the German Commercial Code (HGB) in terms of examining the goods and lodging a complaint, otherwise any claims shall be insubstantial: The Customer shall notify the Supplier's customer service manager of any defects in writing immediately, at the latest within one week of receipt of the delivery. In case of defects which cannot be detected within this period despite careful inspection, the Supplier shall be informed in writing immediately after they have been discovered.

(4) If the Customer has notified the Supplier of a defect, the Supplier shall demand, at its choice and expense, that either:

a) the defective part or unit be sent to the Supplier for repair and subsequent return; or

b) the Customer shall keep the defective part or unit ready and the Supplier shall send a service technician to carry out the repair on the Buyer's premises.

Should the Customer request that rectification work be carried out at a certain location, the Supplier may do so; in this case, any exchanged parts shall not be invoiced, however, working time and travelling expenses shall have to be paid according to the Supplier's standard rates.

(5) If the rectification should fail after an appropriate period, the Customer can, at its choice, either demand a price reduction or withdraw from the contract.

(6) Liability for normal wear is excluded.

(7) Only the immediate Customer is entitled to claims due to defects against the Supplier and such claims are not transferable.

(8) In case of parts used for completion, refurbishment or modification sent by the Customer to the Supplier, the latter will assume no liability for their behaviour during processing; should the materials become damaged during processing, the Supplier shall be indemnified for the processing costs incurred up to that point, unless the damage is due to an intentional or grossly negligent breach of duty by the Supplier or its vicarious agent or a breach of duty that is of material importance to the object of the contract. This limitation of liability does not apply to personal injury or death.

§ 7 Replacement Parts

For a period of five years following delivery of a machine, the Supplier shall deliver replacement parts for that machine at the current prices.

§ 8 Retention of Title

(1) Until settlement of all accounts receivable to which the Supplier should be entitled from the Customer now or in future arising from any legal grounds (including all balance claims from current account), the following securities shall be granted to the Supplier, which it will release on request at its choice insofar as their value exceeds the accounts receivable lastingly by more than 10%.

(2) The goods remain the property of the Supplier. Processings or modifications of the goods are always made for the Supplier as manufacturer, but without any obligation for it. Should the Supplier's (co-)ownership expire as a result of combination of items, it is agreed upon already now that the Customer's (co-)ownership of this combined item is transferred to the Supplier in a pro rata manner (with regard to the invoice value). The Customer shall store the Supplier's (co-)property free of charge. Goods for which the Supplier is entitled to (co-)ownership will hereinafter be referred to as 'goods under reservation'.

(3) The Customer is entitled to process and sell the goods under reservation in proper business dealings, provided that it is not in default of payment. Pledging or assignment as security is inadmissible. Any other accounts receivable (including all balance claims from current account) arising from resale or any other legal ground (insurance, unlawful act) regarding the goods under reservation are already now assigned in full by the Customer to the Supplier as security. The Supplier authorises the Customer irrevocably to collect the accounts receivable transferred to the Supplier for the Supplier's account in its own name. This collection authorisation can only be revoked if the Customer does not duly meet its payment obligations.

(4) Should any third parties have access of any kind to the goods under reservation, especially by orders of attachment, the Customer shall draw attention to the fact that the goods are the Supplier's property and shall inform the Supplier immediately, so that the Supplier can enforce its rights of ownership. In as far as the third party is unable to reimburse the Supplier for judicial or out-of-court costs arising in this context, the Customer shall be liable for such costs.

(5) In the event of conduct in violation of the contract on the part of the Customer – in particular default of payment – the Supplier shall be entitled to withdraw from the contract and to demand the return of the goods under reservation.

(6) Up to the complete payment of the goods under reservation, the Customer is obliged to keep the Supplier informed about the location of the goods under reservation at any time.

§ 9 Payment

(1) Unless agreed otherwise, the Supplier's invoices are payable 30 days after invoicing without deductions.
The Supplier is entitled, despite provisions made by the Customer stipulating otherwise, at first to credit payments made by the Customer against its older debts and shall inform the Customer of the type of transaction made. In the case that expenses have been incurred or interest accrued, the Supplier is entitled to credit the payment at first against the expenses, then the interest and finally against the main service.

(2) A payment is deemed to have been made only when the Supplier has the amount at its disposal. In case of cheques the payment is deemed as having been made when the cheque is cashed.

(3) Should the Customer be in default of payment, the Supplier shall be entitled to demand interest at a rate of 8 percentage points above the base rate as lump-sum compensation from the relevant time onwards. A lower rate is to be applied if the Customer can provide evidence of a lower burden; the Supplier may provide evidence of a higher damage.

(4) Should the Supplier learn of any circumstances that call the Customer's credit standing into question, in particular in case that a cheque is not cashed or payments are suspended, or should the Supplier learn of any other circumstances which call the Customer's credit standing into question, the Supplier shall be entitled to deem the total remaining debt as due, even if it has accepted cheques. In this case the Supplier is also entitled to demand payments in advance or securities.

(5) The Customer is only entitled to set-off, retention or reduction, even in case that complaints have been made or compensating claims pleaded, when the compensating claims have been determined to be final and beyond dispute. The Customer is, however, also entitled to retention due to compensation claims arising from the same contractual relationship.

§ 10 Design Changes

The Supplier reserves the right to make design changes at any time; however, it is not obliged to include such changes also in products already delivered.

Terms and conditions of sale and payment

§ 11 Patents

(1) In case of custom-made products, the examination and the liability with respect to any third party's property rights is exclusively the responsibility of the Customer. The Customer shall be responsible towards the Supplier in full scope that any third party's property rights will not be infringed hereby and shall hold the Supplier harmless from any possible claims for damages made by third parties due to such an infringement.

(2) The Supplier, in turn, shall indemnify the Customer and its customers with regard to claims arising from violation of copyrights, trademarks or patents, unless the design of a delivery item originates from the Customer. As far as the amount of the indemnification is concerned, the Supplier's obligation to indemnify is limited to the expected damage.
An additional prerequisite for the indemnification is that the conducting of legal proceedings is to be left to the Supplier and that the stated violation of rights is to be assigned exclusively to the design of the Supplier's delivery items without combination or usage together with other products.

(3) The Supplier has the choice to release itself from the obligations taken on in paragraph 1 by either

a) procuring the required licences with regard to the alleged violated patents
or
b) putting an altered delivery item or parts thereof at the Customer's disposal, which in case of exchange with the violating delivery item or part thereof will eliminate the accusation of violation with regard to the delivery item.

§ 12 Secrecy

The Supplier's technical documents, drawings, service and operating manuals as well as any and all information received from the Supplier during the contract negotiations regarding the function and the structure of the goods are subject to secrecy. The Customer agrees to prevent unauthorized persons from getting access to the corresponding information.

(2) Unless expressly otherwise agreed in writing, the information submitted to the Supplier in connection with the orders are deemed as non-confidential.

§ 13 Liability

(1) Claims for damages are excluded regardless of the type of violation, including unlawful acts, insofar as they are not due to intention or gross negligence.

(2) As far as the violation of material contractual obligations is concerned, the Supplier is liable for any negligence, however only up to the amount of the foreseeable damage. Claims for lost profit, saved expenditure, claims for damages by third parties as well as claims for other indirect and consequential damages cannot be made unless an essential quality feature guaranteed by the Supplier has the express purpose of protecting the Customer from such damage.

(3) The liability limitations and exclusions in paragraphs 1 and 2 are not applicable to claims which are due to deceitful conduct on the part of the Supplier, nor in case of a liability for guaranteed quality features, nor to claims according to the product liability law, nor to injuries to life, body or health.

(4) Insofar as the liability of the Supplier is excluded or limited, this shall also apply to the Supplier's clerical staff, employees, representatives and vicarious agents.

§ 14 Final Provisions

(1) A transfer of the contractual rights and obligations to third parties by the Customer is not permitted unless the Supplier has given its written consent.

(2) These General Terms and Conditions and the complete legal relationship between Supplier and Customer are subject to the laws of the Federal Republic of Germany. The provisions of the UN Convention on Contracts for the International Sale of Goods shall not apply.

(3) Bückeburg shall be the exclusive place of jurisdiction for any disputes arising directly or indirectly out of the contractual relationship if the Customer is a trader, a legal person under public law or a special fund under public law. The Supplier shall also have the right to institute legal proceedings at the Customer's place of business.

(4) In accordance with section 33 of the German Data Protection Law (BDSG) it is hereby pointed out that the Customer's data will be stored by the Supplier. These data will be processed in accordance with both the Federal Data Protection Law (BDSG) and the Teleservices Data Protection Law.

(5) Should one of the provisions of these General Terms and Conditions or a provision of any other agreement be or become ineffective, this will not affect the validity of any other provisions or agreements.
