

**High flow - Cv of 1.2 to 49.5**  
**Durable, robust construction**  
**1/4" to 2" ports (BSPP or PTF threads)**  
**Wide range of voltages available**  
**Four functional types: available in 2/2, 3/2, 3/2 multi-directional, and 4/2 configurations**

### Technical data

#### Medium:

Filtered and lubricated or non-lubricated compressed air or vacuum.

#### Operation:

Poppet valve solenoid pilot actuated.

#### Mounting:

Through-holes in valve body and subbase.

#### Port Size:

1/4" to 2" PTF, BSPP

#### Operating Pressure:

Maximum 150 psig (10.3 bar).

#### Flow Characteristics:

Basic Function	Cv*
1/4" 3/2 & 4/2	1.2 - 1.8
1/2" 2/2, 3/2 & 4/2	3.2 - 5.8
1" 2/2, 3/2 & 4/2	10.3 - 17.7
2" 2/2 & 3/2	39.6 - 49.5

#### Operating Temperature:

-20°F to 120°F\*\* (-29°C to 49°C)

\*\*Consult Technical Service for use below 34°F (+2°C).

#### Materials:

Body: Aluminum alloy body, piston, poppets and subbase.

Operators: Zinc or aluminum solenoid pilot operators, stainless steel or steel, reinforced polyester, brass or polyurethane, acetal, copper wire.  
 Elastomers: Nitrile rubber seals. (Fluorocarbon seals are optional, contact Technical Services.)

#### Fluids

Filtered and lubricated compressed air or vacuum. Prospector poppet valves with A1, AA, or A4 air operators or with C, D, F, or X series solenoid operators may be used with filtered, non-lubricated compressed air or vacuum, although tests indicate that service life will be reduced. Valves with other operators must not be used in non-lubricated service.

#### Seal Compatibility

Prospector poppet valve seals are compatible with most good quality O-ring lubricants, including:

- DC BR-2+ grease (Dow Corning)
- DC 44 grease (Dow Corning)
- Magnalube G (Saunders Industries)

Non-detergent mineral based oil such as Mobil DTE light oil.

Poppet valve seals are not compatible with WD-40 or commonly used deicer fluids. Consult factory to verify compatibility of lubricants or fluids not listed above.

#### Valve Exhaust

The valve exhaust port must not be restricted with anything more than a muffler or equal pipe size (most exhaust ports are larger than the inlet port). Back pressure on the exhaust side of the valve poppets can, under some conditions, result in failure to operate. If exhaust is to be piped away, piping should be installed horizontally or at a downward angle from the valve to provide drainage and minimize sludge formation.

#### Use of Speed Controls

Speed controls may be installed in the exhaust port on Norgren 3-port/2-position multi-directional poppet valves. Note: On all other poppet valves, speed controls should only be installed in the air line between the valve and the air-operated device and as close as possible to the device.

#### Vacuum Service

Valves that can be used in vacuum service are identified by a "J" in the 6th position of the model number. For on-off application of vacuum, use a normally closed 2-port/2-position (2-way) valve. Connect the vacuum to the inlet port. When the valve is actuated, vacuum will be applied to the outlet port. For selecting alternately between vacuum and pressure, use a normally open 3-port/2-position (3-way) valve. Connect the vacuum to the exhaust port and vent the inlet port. When the valve is actuated, vacuum will be applied to the outlet port.

In addition, 4-port/2-position (4-way) valves can be connected the same way as 3-port/2-position (3-way) valves for selecting alternately between vacuum and pressure or vacuum and vent. That is, connect the vacuum to the exhaust port and pressure or vent to the inlet port. When the valve is actuated, the cylinder ports (outlets) will be alternately switched between vacuum and pressure or vacuum and vent.

#### Representative response times @ 90 psig (6.2 bar) inlet pressure

Time lapse between solenoid energized and initial rise of outlet pressure

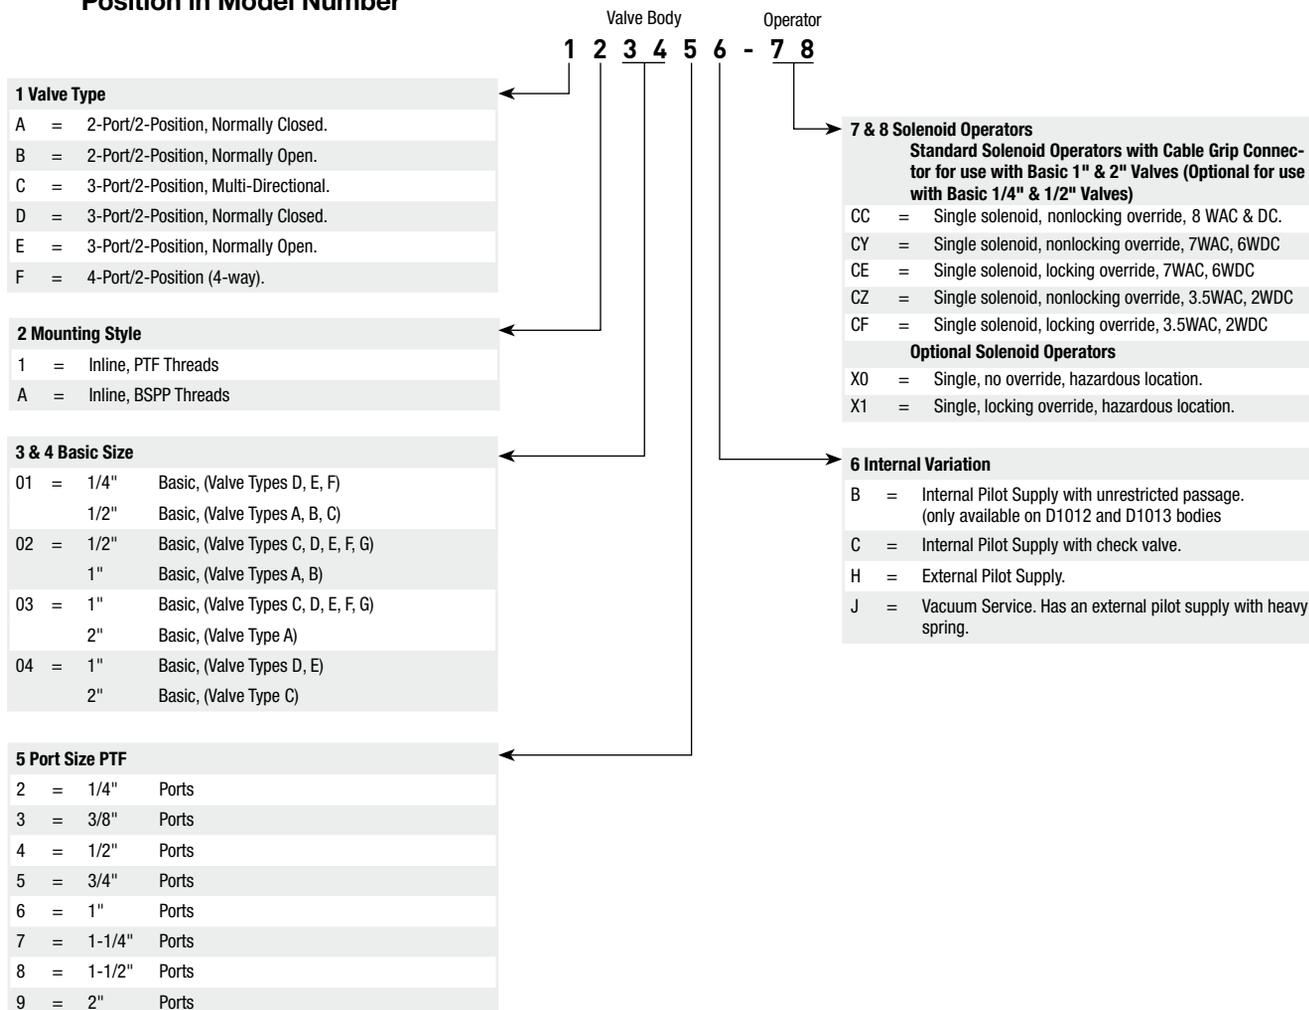

Operator	Basic 1/4"	Valve body Basic 1/2"	Basic 1"
	4-way	3-way	3-way
CC	3.4 ms	15.2 ms	32.2 ms
CE	4.0 ms	21.0 ms	42.0 ms
CF	3.9 ms	38.3 ms	82.3 ms

#### Time lapsed between solenoid energized and outlet pressure rise to 90% of inlet pressure

Operator	Basic 1/4"	Valve body Basic 1/2"	Basic 1"
	4-way	3-way	3-way
CC	28.9 ms	19.0 ms	40.3 ms
CE	37.8 ms	25.1 ms	52.4 ms
CF	80.7 ms	45.8 ms	102.8 ms

Use this chart as a product deconfigurator. It is not designed to "build" model numbers.

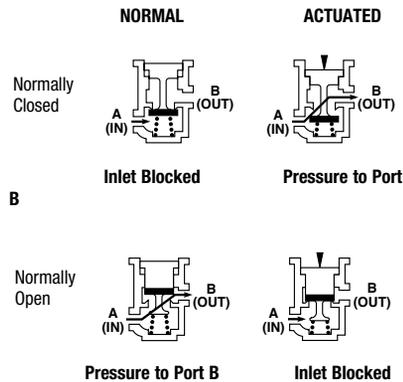

Position in Model Number

## 2-Port/2-Position

These 2-way valves have an inlet and outlet port and are used as shutoff valves that open or close an air line. They are available in normally closed or normally open models. The normally closed model blocks flow when in its normal position, and permits flow when it is actuated. The normally open model permits flow when in its normal position, and blocks flow when actuated. Typical applications include on-off control of main plant air, air to branch lines, systems and air motors.

### Flow Diagrams

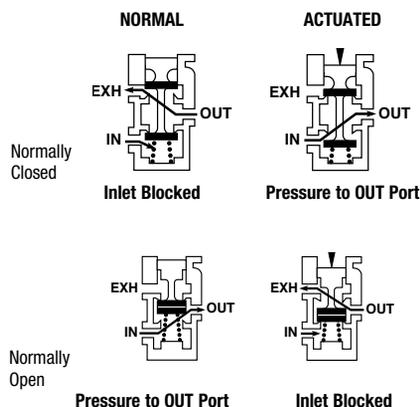

## 3-Port/2-Position

These 3-way valves have an inlet, outlet, and exhaust port and are typically used to pressurize and then exhaust air from such devices as single-acting cylinders. They are available in normally closed or normally open models. The normally closed model exhausts air from the device when in its normal position, and pressurizes the device when actuated. The normally open model pressurizes the device when in its normal position and exhausts air from the device when actuated.

The normally closed valve is available with two options: a position indicator pin and an air or solenoid momentary signal operator. The indicator pin can be used to operate a switch or other device to provide a signal for a control circuit. The momentary signal operator is used when it is desirable to control the valve with two alternately applied momentary signals (first signal shifts and holds the poppet; the second allows the poppet to return to its normal position).

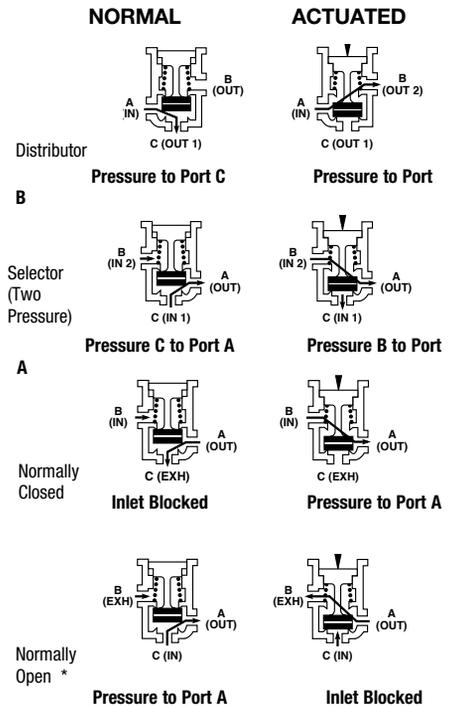

### Flow Diagrams

## 3-Port/2-Position (Multi-Directional)

These 3-way valves can be used in four different ways — as a distributor, directing air first to one port, then to another; as a selector, directing first high, then low pressure air (or vacuum) to the same outlet; as a standard 3-port/2-position normally closed valve; and as a standard 3-port/2-position normally open \* valve. Multi-directional valves are the only poppet valves with which speed controls can be installed in the exhaust port.

### Flow Diagrams

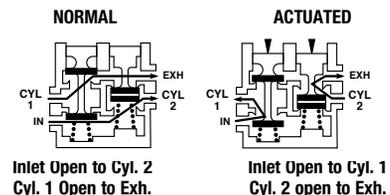

\* Normally open valves require an external pilot supply.

## 4-Port/2-Position (4-Way)

This 4-way valve has a normally closed and a normally open 3-way valve element in a common body. Both elements are actuated simultaneously by a single operator. The valve body has an inlet, exhaust, and two outlet ports. In the normal position, pressurized air is directed to one outlet port and air is exhausted from the second outlet port. In the actuated position, the connections are reversed. Typical applications include control of double acting cylinders and reversible air motors.

This valve is available with an optional air or solenoid momentary signal operator. Momentary signal operators are used when it is desirable to control the valve with two alternately applied momentary signals. The first signal shifts and holds the valve poppets in the actuated position; the second allows the poppets to return to the normal position.

Flow Diagrams with Single and Momentary Signal Operator

The 4-port/2-position (4-way) valve is also available with an optional air or solenoid twin operator, which allows independent operation of each valve element.

\* For No override replace the -X1 with a -X0.

\*\* Vacuum service replace the 6 digit "C" with a "J", this will then allow the operating pressure down to 29" Hg, with a pilot pressure of 30-150 psig.

\*\* External pilot service replace the 6 digit "C" with a "H", operating pressure will now go to 0, but a minimum of 30 psig and/or greater than supply pressure, required for external pilot supply.

BSPP threads replace the 2 digit "1" with an "A".

**Low Wattage Version**

**2/2 Normally Open solenoid to operate/spring return**

\* For Non-locking override replace the -CE with a -CY.

\*\* Vacuum service replace the 6 digit "B" or "C" with a "J", this will then allow the operating pressure down to 29" Hg, with a pilot pressure of 30-150 psig

\*\*\* External pilot service replace the 6 digit "B" or "C" with a "H", operating pressure will now go to 0, but a minimum of 30 psig and/or greater than supply pressure, required for external pilot supply.

\*\*\* Additional voltages and connector option refer to below tables.

BSPP threads replace the 2 digit "1" with an "A".

#### Note: Additional connectors add the code from table below to the end of the part number

Connector Description	Connector Code	Order Separately
Cable Grip 0 -240VDC/VAC	standard	54934-01
1/2" conduit 0 -240VDC/VAC	1V3	54934-05
Cable Grip with LED 24 VDC/VAC	1V4	54934-08
Cable Grip with LED 120VAC	1VB	54934-02
6' Molded cable 0-240VDC/VAC	1V5	54934-21

#### Examples:

D1024C-CE1W2 with a Cable Grip Connector, change to Cable Grip with LED option, order D1024C-CE1W21V4

D1036C-CE with a Cable Grip Connector, changed to a 6' molded cable option, order D1036C-CE1V5

#### Note: Additional voltages,add or replace the 1W2 in above code with the voltage code from table below in the desired part number

Voltage Description	Voltage Code	Order Separately
12 VDC	1W1	54452-02
24 VDC	1W2	54452-03
24V 50/60 Hz	1W4	54452-05
220V 50/60 Hz	standard	54452-01
220/240V, 50/60 Hz	1W6	54452-07

#### Examples:

D1012B-CE 120VAC, changed to a 24VAC option, order D1012B-CE1W4

D1025H-CE1W2 24 VDC, change to a 220/240V, 50/60Hz option, order D1025H-CE1W6

\* For No override replace the -X1 with a -X0.

\*\* External pilot service replace the 6 digit "C" with a "H", operating pressure will now go to 0, but a minimum of 30 psig and/or greater than supply pressure, required for external pilot supply.

BSPP threads replace the 2 digit "1" with an "A".

NOTE: If used as normally open valve, an external pilot supply is required.

\* For Non-locking override replace the -CF with a -CZ.

\*\* External pilot service replace the 6 digit "C" with a "H", operating pressure will now go to 0, but a minimum of 30 psig and/or greater than supply pressure, required for external pilot supply.

\*\*\* Additional voltages and connector option refer to below tables.

BSPP threads replace the 2 digit "1" with an "A".

#### Note: Additional connectors add the code from table below to the end of the part number

Connector Description	Connector Code	Order Separately
Cable Grip 0 -240VDC/VAC	standard	54934-01
1/2" conduit 0 -240VDC/VAC	1V3	54934-05
Cable Grip with LED 24 VDC/VAC	1V4	54934-08
Cable Grip with LED 120VAC	1VB	54934-02
6' Molded cable 0-240VDC/VAC	1V5	54934-21

#### Examples:

F1023C-CF1WH with a Cable Grip Connector, change to Cable Grip with LED option, order F1023C-CF1WH1V4

F1037C-CF with a Cable Grip Connector, changed to a 6' molded cable option, order F1037C-CF1V5

#### Note: Additional voltages, add or replace the 1WH in above code with the voltage code from table below in the desired part number

Voltage Description	Voltage Code	Order Separately
12 VDC	1WF	54469-01
24 VDC	standard	54469-02
24V 50/60 Hz	1UD	54469-04
120V 50/60 Hz	1WH	54469-03
220/240V, 50/60 Hz	1WN	54469-08

#### Examples:

F1012C-CF 24 VDC, changed to a 12 VDC option, order F1012C-CF1WF

F1025H-CF1WH 120Vac, change to a 220/240V, 50/60Hz option, order F1025H-CF1WN

\* For No override replace the -X1 with a -X0.

\*\* External pilot service replace the 6 digit "C" with a "H", operating pressure will now go to 0, but a minimum of 30 psig and/or greater than supply pressure, required for external pilot supply.

BSPP threads replace the 2 digit "1" with an "A".
