ISO G, ISO R, NPT

Technical features

Medium:

Compressed air

Operation:

Essentially a pilot operated check valve, a blocking fitting allows air flow in both directions if a pilot pressure is applied to port 12. When pressure to the pilot port is removed, flow occurs in one direction only, due to an integral non-return valve. When used in pairs, blocking fittings can control an actuator to give safe operation in the event of an electrical problem, air failure or tube breakage. In order to provide a 'safe system', all possible conditions need to be considered in the event of an emergency.

Operating pressure:

1... 10 bar (14 ... 145 psi)

Pilot pressure:

See table

Thread size:

ISO G 1/8 ... 1/2

ISO R 1/8 ... 1/2

1/8 ... 1/2 NPT

Ambient/Media temperature:

0°C ... +80°C (+32°F ... +176°F)

Air supply must be dry enough to avoid ice formation at temperatures below +2°C (+35°F).

Warning

These products are intended for use in industrial compressed air systems only. Do not use these products where pressures and temperatures can exceed those listed under »**Technical features/data**«.

Before using these products with fluids other than those specified, for non-industrial applications, life-support systems or other applications not within published specifications, consult Norgren Ltd.

Through misuse, age, or malfunction, components used in fluid power systems can fail in various modes.

The system designer is warned to consider the failure modes of all component parts used in fluid power systems and to provide adequate safeguards to prevent personal injury or damage to equipment in the event of such failure.

System designers must provide a warning to end users in the system instructional manual if protection against a failure mode cannot be adequately provided.

System designers and end users are cautioned to review specific warnings found in instruction sheets packed and shipped with these products.
