

V68H - Olympian Plus plug-in system **Pressure relief valves**

- > Port size: 3/4" ... 11/2" (ISO G/PTF)
- > Olympian relief valves protect compressed air systems from over-pressurisation
- > High relief capacity, sensitive and accurate
- > Threaded relief port for silencer or piped exhaust

Technical features

Medium.

Optional

Compressed air only

Maximum operating pressure:

20 bar (290 psi)

Outlet pressure adjustment range:

Standard 0,3 ... 10 bar (4 ... 145 psi)

0,3 ... 4 bar (4 ... 58 psi), 0,7 ... 17 bar (10 ... 246 psi)

Port sizes:

3/4", 1", 11/4" or 11/2"

Gauge port:

1/8 PTF with PTF main ports Rc1/8 with ISO G main ports-

Gauge ports:

Rc 1/8

Relief port:

1" PTF with PTF yoke ports Rc1 with ISO G yoke ports

Standard compliances:

Il 2G Ex h IIC T6 Gb II 2D Ex h IIIC T85° Db

Ambient/Media temperature:

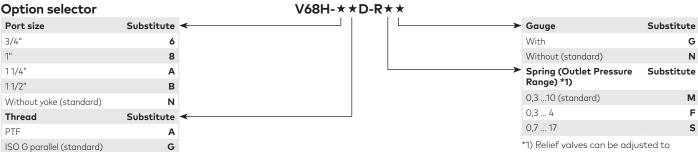

-20° ... +80°C (-4° ... +176°F) Version with gauge: -20° ... +65°C (-4° ... +149°F) Air supply must be dry enough to avoid ice formation at temperatures below +2°C (+35°F).

Materials:

Body, bonnet & yoke: aluminium Adjusting screw: steel Elastomers: NBR

Technical data - standard models

Symbol	Port size	Size	Pressure range (bar)	Weight (kg)	Model
	G3/4	_	0,3 10	2,21	V68H-6GD-RMN
	G1	Basic	0,3 10	2,20	V68H-8GD-RMN
	G1 1/4	_	0,3 10	2,22	V68H-AGD-RMN
	G1 1/2	_	0,3 10	2,26	V68H-BGD-RMN
	Without yoke	_	0,3 10		V68H-NND-RMN

*1) Relief valves can be adjusted to pressures in excess of, and less than, those specified. Do not use these units to control pressures outside of specified ranges.

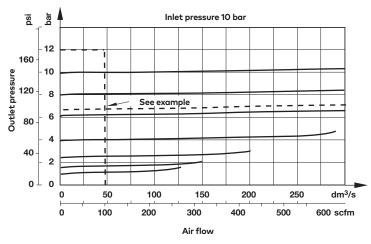

Flow characteristics

Unported

Pressure range 1 ... 10 bar (15 ... 145 psi)

How to select a relief valve

The function of a relief valve is to help prevent an over pressure condition that could result in damage to downstream equipment. Typically, a pressure regulator reduces the supply pressure from the air compressor to a suitable working pressure. The relief valve is installed downstream of the regulator to protect downstream equipment from high pressure spikes.

Flow capacity of the relief valve selected must equal or exceed the flow and pressure rating of the air compressor.

EXAMPLE:

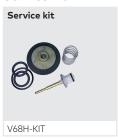

If your compressor delivers 47 dm³/s (100 scfm) at 12 bar (175 psi) and your system requires a working pressure of 6.2 bar (90 psi), the relief valve must have a set pressure slightly higher than the 6,2 bar (90 psi) working pressure and be capable of flowing 47 dm³/s (100 scfm) at 12 bar (175 psi), or pressures less than 12 bar (175 psi).

Warning

These products are intended for use in industrial compressed air systems only. Do not use these products where pressures and temperatures can exceed those listed under **»Technical features/**

Before using these products with fluids other than those specified, for non-industrial applications, life-support systems or other applications not within published specifications, consult Norgren.

Through misuse, age, or malfunction, components used in fluid power systems can fail in various modes.

The system designer is warned to consider the failure modes of all component parts used in fluid power systems and to provide adequate safeguards to prevent personal injury or damage to equipment in the event of such failure.

System designers must provide a warning to end users in the system instructional manual if protection against a failure mode cannot be adequately provided.

System designers and end users are cautioned to review specific warnings found in instruction sheets packed and shipped with these products.
